LETTER OF TRANSMITTAL.

DEPARTMENT OF COMMERCE,
BUREAU OF THE CENSUS,
Washington, D. C., March 15, 1915.

SIR:

I have the honor to transmit herewith Volume I of the report on Wealth, Debt, and Taxation for the fiscal year 1913, which will be comprised in two volumes.

Parts I, II, III, IV, and V of this volume contain the data already published in five bulletins entitled, respectively, "Estimated valuation of national wealth: 1850-1912," "National and state indebtedness and funds and investments: 1870-1913," "County and municipal indebtedness: 1913, 1902, and 1890; and sinking fund assets: 1913," "Taxation and revenue systems of state and local governments: 1912," and "Assessed valuation of property and amounts and rates of levy: 1860-1912."

This report was prepared under the supervision of Starke M. Grogan, chief statistician in charge of Wealth, Debt, and Taxation; John Lee Coulter, expert special agent in an advisory capacity; and Arthur J. Hirsch, chief of division.

Respectfully,

Director of the Census.

TO HON. WILLIAM C. REDFIELD,
Secretary of Commerce.

WEALTH, DEBT, AND TAXATION:

1913

VOLUME I

WEALTH, DEBT, AND TAXATION.

INTRODUCTION.

Scope of report.—The statistics of public wealth, indebtedness, valuations, taxation, revenues, and expenditures for the fiscal year 1913 were issued, as soon as completed, in the form of independent bulletins, for the purpose of giving the public the benefit of the information as soon as it was compiled. These bulletins have been assembled into two volumes.

Volume I presents in their entirety the results of the most recent decennial census investigation pertaining to national wealth, indebtedness, assessed valuations, and levies; while Volume II of the same series contains the statistics pertaining to the public revenues and expenditures, which are closely related to the data presented in Volume I and are gathered under the same authorization of Congress. The statistics of Volume I are presented in five parts, each part carrying its own text discussion and definition of terms ruling in its compilation.

Estimated valuation of national wealth.—In Part I will be found statistics pertaining to the estimated valuation of the tangible wealth of the United States, exclusive of Alaska, Hawaii, Porto Rico, and the Philippines. The tables of this part contain estimates of the value of property belonging to corporations and individuals, to the national, state, county, and local governments, and to religious, charitable, and educational institutions. Details of the important classes of wealth are shown for the years 1880, 1890, 1900, 1904, and 1912.

Aggregate of public indebtedness.—Parts II and III present the report on the public indebtedness of the national and state governments, and that of counties, cities, villages, townships, school districts, etc., respectively. The tables for the national and state governments cover the period from 1870 to 1913 and present, in addition to the statistics of indebtedness outstanding, the amount of the assets held by these units in sinking, investment, and trust funds. The figures for counties and lesser civil divisions, as given in Part II, relate to the year closing June 30, 1913, or the nearest date prior thereto. In the tables of Part II will be found the total indebtedness, by kind of obligation, and the amount of sinking fund assets in 1913, and the total and per capita indebtedness less sinking fund assets in 1913, 1902, and 1890. The aggregate as given in Table I, which follows, is believed to represent the indebtedness, total and per capita, of practically

every political division and subdivision in the United States. A study of this table shows that the public indebtedness less sinking fund assets of the Nation, the states, and all minor civil divisions of government in the United States amounted to \$4,850,460,713 in 1913. This is an increase of \$2,011,564,591, or 70.9 per cent, over the amount reported for 1902. During the period from 1890 to 1902 the total indebtedness increased \$849,783,280, or 42.7 per cent. The per capita indebtedness increased \$13.98, or 38.8 per cent, and \$4.23, or 13.3 per cent, respectively, during the two periods mentioned.

TABLE I.—TOTAL AND PER CAPITA NET INDEBTEDNESS OF THE NATIONAL GOVERNMENT, STATES, AND MINOR DIVISIONS: 1913, 1902, AND 1890.

DIVISION OF GOVERNMENT.	TOTAL NET INDEBTEDNESS. ¹			PER CAPITA NET INDEBTEDNESS.		
	1913	1902	1890	1913	1902	1890
Total..	\$4,850,460,713	\$2,838,896,122	\$1,989,112,842	\$49.97	\$35.99	\$31.76
Nation.....	1,028,564,055	969,457,241	² 851,912,752	10.59	12.22	13.60
States.....	345,942,305	239,369,271	² 211,210,487	3.57	3.03	3.37
Minor divisions.....	3,475,954,353	1,630,069,610	925,989,603	35.81	20.74	14.79

¹ Total indebtedness less sinking fund assets or funds available for payment of debt.

² Indebtedness of 1891; that of 1890 not available.

The net indebtedness of the National Government increased \$59,106,814, or 6.1 per cent, from 1902 to 1913, and \$117,544,489, or 13.8 per cent, from 1890 to 1902. Owing to the rapid growth in the population, the per capita debt decreased \$1.63, or 13.3 per cent, from 1902 to 1913, and \$1.38, or 10.1 per cent, from 1890 to 1902.

The debt incurred by the 48 state governments increased \$106,573,034, or 44.5 per cent, and the per capita debt increased \$0.54, or 17.8 per cent, during the period 1902 to 1913. From 1890 to 1902 the net indebtedness of the states increased \$28,158,784, or 13.3 per cent, and the per capita debt decreased \$0.34, or 10.1 per cent.

The cities, villages, towns, townships, school districts, drainage, irrigation, and levee districts, fire districts, poor districts, road districts, and all other minor divisions of government in the United States having power to incur debt, reported a net indebtedness of \$3,475,954,353 in 1913. This is an increase of

\$1,845,884,743, or 113.2 per cent, over the amount reported for 1902. A small part of this increase is due, doubtless, to a more complete canvass in the later year. During the period from 1890 to 1902 the net indebtedness of the minor divisions increased \$704,080,007, or 76 per cent. The per capita net debt increased \$5.95, or 40.2 per cent, from 1890 to 1902, and \$15.07, or 72.7 per cent, from 1902 to 1913.

Revenue laws, valuations, and levies.—Parts IV and V present such data as have been compiled pertaining to the assessment of property for taxation and the levying of taxes thereon. Part IV contains a digest of the revenue laws of the several states, while Part V shows the assessed valuations and levies fixed for the purposes of ad valorem taxation by authority of such revenue laws.

PART I

ESTIMATED VALUATION OF NATIONAL WEALTH:
1850–1912

PART I.

ESTIMATED VALUATION OF NATIONAL WEALTH: 1850-1912.

INTRODUCTION.

Scope of Part I.—For each decennial census since 1850 Congress has authorized and directed the compilation of statistics of the aggregate wealth of the Nation, or, in other words, of the value of all the tangible property within its borders. In authorizing and directing the making of this compilation Congress has sought to secure for the Nation an approximation to what the business man prepares for his guidance when he takes an inventory of his possessions. The data here presented necessarily rest largely upon estimates, and their accuracy must depend upon the adequacy of the methods employed in making the estimates. The methods employed in arriving at the estimated values presented in Part I are briefly stated on pages 16 to 20 of this volume.

The greater portion of the wealth here considered is the property of the 97,000,000 residents of the land. Smaller portions belong to nonresidents, to the national, state, and local governments, and to charitable, religious, and educational institutions and associations. Included with the property belonging to the National Government are the unappropriated lands of our public domain.

Territory included in the investigation.—The tables of this report are for the United States, exclusive of Alaska, Hawaii, Porto Rico, and the Philippines. The omission of the statistics for the geographic divisions named is due to the fact that no data were secured from them on which to base estimates for this part of the report on Wealth, Debt, and Taxation.

Date to which statistics relate.—The statistics presented in Part I are for the year 1912, with certain total amounts for comparison for the years 1904, 1900, 1890, 1880, 1870, 1860, and 1850.

Classification of property.—For the purposes of this investigation the Bureau of the Census classifies all forms of wealth under the two designations *real property and improvements* and *personal and other property*. Definitions of "real" and "personal" property are found in the statutes of nearly all of the states in their laws relating to the assessment and collection of revenues. Such definitions will be found in Part IV of this report, which presents a digest of the revenue laws of the several states. Practically no two states agree in the meaning which they assign to the terms mentioned. For the purposes of this investigation the Bureau of the Census uses the term "real property and improvements" as descriptive of lands and the structures and fixed improvements thereupon, exclusive of the lands used for the purposes of railroads,

street railways, telegraph and telephone systems, privately owned central electric light and power stations, and privately owned waterworks. All property not involving the possession of lands and those specified classes of property involving such possession are referred to by the Bureau of the Census as "personal and other property."

From the standpoint of the tax laws of the several states all real, personal, and other property is of two distinct classes, *taxed* and *exempt*, according as it is or is not subject to the general or ad valorem tax. In the tables of Part I are presented separate estimates of the values of taxed and exempt real property. The taxed real property belongs almost exclusively to private individuals, firms, and corporations; while nearly all exempt realty is the property of the national, state, and local governments, and of religious, charitable, and educational institutions.

The exempt real property consists of (1) the buildings and other structures and public works of the national, state, and local governments, including the lands of public cemeteries, waterworks, and other municipal industries; and (2) all the real property of religious, charitable, and educational institutions that by law is exempt from taxation. Throughout the country the greater portion of this exempt property is governmental, and the lesser portion belongs to religious, charitable, and educational institutions, with comparatively trifling amounts credited to soldiers, clergymen, and other individuals.

A number of our best writers and students of public wealth object to including the value of exempt property in estimates such as those given in this report. These objections are based upon the following general facts: The public buildings, public works, and public lands held by the governments, and similar property held by the religious, charitable, and educational institutions, are paid for out of the money of the general public, and the value of this property and these public works is at once reflected in the higher actual value of the taxable private property. In fact, it is urged that one factor causing the general advance in the value of private property is the acquisition by the public of an interest in these forms of public possessions, which have so enormously increased in the past half century. This contention loses a part of its force, however, because of the fact that exempt property is not necessarily publicly owned property, that the proximity to certain classes of exempted government property, such as refuse disposal plants, and charitable and

correctional institutions, and even school buildings and playgrounds, results in depreciation in the value of adjacent private property, and that the value of improved taxed property may be reflected in the enhanced value of adjoining property as well as that of exempt property. Accordingly, in this report, as in all census reports since 1880, the estimated value of exempt property is added to that of taxed property, the resulting total representing, approximately at any rate, the value of the national wealth. The value of

such public improvements as street paving, sewer systems, etc., is omitted from the tables for the reason that such properties, as a rule, have value in use only and none in exchange, and because of the fact that in most cities a part or all of the cost of such improvements is assessed against property presumably benefited, such presumption doubtless being taken into account in determining valuations for purposes of assessment of general property taxes by officials charged with the duty of determining such valuations.

REAL PROPERTY AND IMPROVEMENTS.

Real property and improvements, taxable and exempt: 1912.—Table 5' presents, by states, the aggregate of the estimated true value of all real property and improvements, and personal and other property. In Table 6 the estimated true value of such properties is shown under two headings, "Taxable" and "Exempt," the latter column showing only the valuation of exempt real property and improvements.

The estimated value of the taxable property, as shown in Table 6, includes the value of taxable real property

and improvements, which was arrived at by applying various ratios to the assessed valuation of real property and improvements in the different states. These ratios, which are presented below, were secured from state reports, except for 16 states for which the ratios for 1912 are the same as those used in 1904. For those 16 states no ratios were found in the local reports, and no data available indicated any particular change in the basis of assessment in 1912 from that employed in 1904.

PER CENT OF ESTIMATED TRUE VALUE OF REAL PROPERTY AND IMPROVEMENTS REPRESENTED BY ASSESSED VALUATIONS.

In addition to the value of taxable real property and improvements the column of Table 6, headed "Taxable," includes all forms of wealth the value of which is shown in columns 2 to 9, inclusive, of Table 5. Small parts of all of these values were exempt from taxation, but it is impossible to determine the amount that was exempt. To this extent, therefore, the values of taxable property set forth in the table are exaggerated.

The estimated value of exempt property, as shown in Table 6, was arrived at by averaging this property as amounting to one-eighth of the value of the taxed real property and improvements. This percentage represents the average of the percentages of exempt to taxed property in states from the reports of which values of

exempt property could be taken. The only official reports showing the valuations of exempt property are those issued by the states of New Jersey, New York, and Ohio, and the District of Columbia; that for the District of Columbia being as of July 1, 1914. In 1900 the estimated value of exempt property was 13.4 per cent of the estimated true value of taxed real property and improvements; in 1904 it was 12.3 per cent of such estimated value. From the conclusion arrived at, that the value of exempt property increased with as great rapidity as that of taxed property, it was decided to make the ratio $12\frac{1}{2}$ per cent, practically the same as that used in 1904. Slight deviations from this ratio, however, appeared to be necessary in computing the true value of exempt property in a number of states.

PERSONAL AND OTHER PROPERTY.

Classification.—Table 5 presents, by states, for 1912, the estimated true value of what is designated as "personal and other property." The estimates are presented in seven parallel columns, under the designations (1) live stock; (2) farm implements and machinery; (3) manufacturing machinery, tools, and implements; (4) gold and silver coin and bullion; (5) railroads and their equipment; (6) street railways, shipping, etc.; and (7) all other.

The subclasses included in classes (6) and (7) mentioned above are discussed in detail on pages 18 to 20, inclusive. The data could not be prepared with sufficient accuracy of detail to warrant their separate presentation by states, but the total valuations for continental United States are presented in Table 1, which shows also the previously published valuations for 1904 and 1900.

TABLE 1.—ESTIMATED TRUE VALUE OF SPECIFIED CLASSES OF PERSONAL AND OTHER PROPERTY: 1912, 1904, AND 1900.

FORMS OF WEALTH.	1912	1904	1900
Street railways, shipping, etc.	\$10,265,207,321	\$4,840,546,909	\$3,495,228,359
Street railways.....	4,596,563,292	2,219,966,000	1,576,197,160
Telegraph systems ¹	223,252,516	227,400,000	211,650,000
Telephone systems.....	1,081,433,227	585,840,000	400,324,000
Pullman and other cars not owned by railroads.....	123,362,701	123,000,000	98,836,600
Shipping and canals.....	1,491,117,193	846,489,804	537,849,478
Irrigation enterprises.....	360,865,270		
Privately owned waterworks.....	290,000,000	275,000,000	267,752,468
Privately owned central electric light and power stations.....	2,098,613,122	562,851,105	402,618,653
All other.....	34,334,290,655	18,462,281,792	15,174,042,540
Agricultural products.....	5,240,019,651	1,899,379,652	1,455,069,323
Manufactured products.....	14,693,861,489	7,409,291,668	6,087,151,108
Imported merchandise.....	826,632,467	495,543,685	424,970,592
Mining products.....	815,552,233	408,066,787	326,851,517
Clothing and personal adornments.....	4,295,008,593	2,500,000,000	2,000,000,000
Furniture, carriages, and kindred property.....	8,463,216,222	5,750,000,000	4,880,000,000

¹ Includes wireless systems.

CLASSES OF PERSONAL AND OTHER PROPERTY.

Live stock.—The valuations of the principal classes of domestic animals on farms were taken from the yearbook of the Department of Agriculture for 1912, which gives the estimated value as of January 1, 1913. The values of other classes of live stock on farms, domestic animals not on farms, poultry, and bees are based upon the census report for 1909, with an allowance for increased value from 1909 to 1912, based on the annual increase from 1899 to 1909.

Farm implements and machinery.—The values shown for farm implements and machinery in use in 1904 were obtained by applying to the value of these articles reported in 1899 the percentage of increase in the value of manufactured agricultural implements, wagons, etc., from 1899 to 1904, as shown in the census of manufactures for 1904. Likewise, the estimates for 1912 have been prepared by adding to the values reported in the census of manufactures for 1909 an additional value, based on the average annual rate of increase from 1899 to 1909.

Manufacturing machinery, tools, and implements.—For 1900 and 1904 data for the value of manufacturing machinery, tools, and implements were secured from the reports of the census of manufactures. The census of 1910, based on the operations of 1909, did not, however, show these values separately, but included them with capital, so that it was necessary to prepare the estimate for 1912 on a different basis. A study of the reports of 1899 and 1904 shows that the increase in the value of manufacturing machinery, tools, and implements for that period was in approximately the same ratio as the increase in all capital. The estimated value of capital in 1912, including machinery, etc., was obtained by applying the annual rate of increase from 1904 to 1909. It was then assumed that machinery, tools, and implements increased in value at the same rate as the total capital.

Gold and silver coin and bullion.—The value of gold and silver coin and bullion for 1912 was taken from the report of the Director of the Mint, as were also the values for the years 1900 and 1904. The totals shown in the above-mentioned report included the coin and bullion in the outlying possessions of Alaska, Hawaii, Porto Rico, and the Philippine Islands. The amount of gold and silver coin and bullion belonging to continental United States was obtained by deducting the amount held by the banks of these dependencies. The amount remaining was apportioned among the several states as follows: To each state was assigned an amount equal to the value of the coin and gold and silver certificates in the possession of the banks of that state, as shown by the report of the Comptroller of the Currency. The remainder, including the free coin and bullion in the United States Treasury and the amounts estimated by the Director of the Mint as being in the hands of the people, was apportioned among the several states according to population.

Railroads and their equipment.—The estimated value of railroads and their equipment for 1904 was taken from Census Bulletin 21 entitled "Commercial valuation of railway operating property in the United States." No publication of this kind has been made since. The valuation shown for 1912 was obtained from a report of the Interstate Commerce Commission, which showed the total valuation of road and equipment for all railroads in the United States. From this total has been deducted the reserve for depreciation of roads of class 1, which comprises those roads earning \$1,000,000 or more per annum, the reserve for depreciation of roads of other classes not being reported. The remainder has been distributed among the several states in proportion to the reported mileage of railroads in each state, and to this total has been added the value of

switching and terminal companies, which was reported separately.

Street railways, waterworks, shipping, etc.—In the eighth column of Table 5 is given, by states, the aggregate estimated true value of street railways, telegraph and telephone systems, Pullman and other cars not owned by railroads, irrigation enterprises, privately owned waterworks, privately owned central electric light and power stations, and canals and shipping, including the vessels of the United States Navy, the Lighthouse Service, the Revenue-Cutter Service, and the War Department. The values of the Federal properties mentioned are included here to render the data comparable with those of former reports, and because no column is provided for the value of exempt property other than land and improvements.

Street railways.—The estimated value of street railways is based upon the cost of construction, as shown in the special report on Street Railways, published by the Census Bureau in Bulletin 124.

Telegraph systems.—The estimate for telegraph systems is based upon the cost of construction as given in the special report on Telegraphs, published by the Census Bureau in Bulletin 123, and includes land telegraph systems, ocean cable telegraph systems, and wireless telegraph systems. The value of wireless telegraph systems in 1912 was reported to be \$1,205,770. No valuation for wireless systems was included in the estimates for 1904 and 1900.

Telephone systems.—The estimate for telephone systems is based upon the cost of construction as given in the special report on Telephones published by the Census Bureau in Bulletin 123.

Pullman and other cars not owned by railroads.—The estimate of the value of the cars belonging to the Pullman and other private car companies is based upon the report rendered by the Pullman Company to the Interstate Commerce Commission, which shows the cost of property and equipment, exclusive of land. It is assumed that the value of parlor, sleeping, dining, and private cars owned by the railroads is included in the column "Railroads and their equipment."

Shipping and canals.—The estimate of the value of mercantile shipping is based upon the special report on Transportation by Water, published by the Census Bureau in Bulletin 91. To the value of shipping in 1906 as there given has been added an estimate of the value of ships constructed from 1906 to 1912, based on an average obtained from the census of manufactures of 1904 and 1909, a deduction being made for the value of shipping lost, etc., as obtained from the report of the Bureau of Navigation for the period 1907 to 1912. To the value of the merchant marine has been added the reported cost of the vessels of the United States Navy in active commission, the cost of light vessels and tenders of the Lighthouse Service, the cost of the vessels of the Revenue-Cutter Service, and the value of the floating equipment of

the War Department. No depreciation is shown for the vessels of the United States Navy, as the Navy Department carries its vessels at cost. No effort was made to distribute by states the value of the vessels of the United States Navy.

The valuation of canals used for commercial purposes or leased to railroads was obtained from various sources. The figures for state and corporation canals were taken largely from various state reports and those of Government canals and canalized rivers from reports of the Chief Engineer of the United States Army.

The increase in the valuation reported for 1912 over the valuations shown for 1904 and 1900 is due largely to the construction of the Barge Canal in New York, upon which \$50,864,369 had been expended down to October 1, 1912.

Irrigation enterprises.—Allied to the shipping canals, which are located almost entirely in the Eastern and Southern states, are the irrigation enterprises, which are conducted in the Western states. These enterprises increased in value from \$66,062,275 in 1889 to \$360,865,270 in 1912 and materially increased the land values in the states in which they are located. No report of the value of this class of property was made for 1904 and 1900.

Privately owned waterworks.—The value assigned to privately owned waterworks in 1904 was that of 1900 as reported by the Bureau of Labor, plus a small increase. The value of such property in 1912 is that of 1904, plus an increase at the rate used in computing the 1904 value. The rate of increase employed in the computations is naturally small, for the reason that the normal increase in the value of privately owned waterworks is almost counterbalanced by the sale of a considerable number of such properties to municipalities. No distribution of these values by states has been attempted for any of the years mentioned.

Privately owned central electric light and power systems.—The estimate of the value of privately owned electric light and power stations is based upon the cost of construction as given in the special report on Central Electric Light and Power Stations, published by the Census Bureau in Bulletin 124.

Privately owned gas systems.—The value of privately owned gas works is not here given, for the reason that the value of the land, buildings, and machinery of such works as reported by the census of manufactures is included with other values in Table 5 in the column headed "Manufacturing machinery, tools, and implements."

Products of agriculture, manufactures, mining, etc.—Included in the column "All other" of Table 5 are estimates of the value of (1) the products of agriculture, (2) the products of manufactures, (3) imported merchandise, (4) mining products, (5) clothing and personal adornments, and (6) furniture, carriages, and kindred property. These values are estimated as of December 31, 1912.

Agricultural products.—The valuation of the principal classes of agricultural crops was secured from the yearbook of the Department of Agriculture for 1912. The valuation of other agricultural crops was taken from the census report of 1909, with a due allowance for the increase from 1909 to 1912.

The value of agricultural products which were in the possession of the farmers and traders of the country on December 31, 1912, is estimated to be 90 per cent of the value of the crops of that year. This estimate is much larger than the one shown for 1904, due to the fact that the estimate for that year was as of June 1, a date when the crops of the preceding year had been to a large extent consumed. It is believed that the estimate of 90 per cent of the value of the crops is a conservative one, for, while more than 10 per cent of many crops had been consumed, it must be remembered that farm values were used and no allowance was made for the increased value, by reason of transportation profits of middlemen, of that portion of the crops which was in the hands of the traders of the country. The value of the crops was distributed to the states in which they were produced, and adjustments were made to allow for the eastward movement of grain for export and consumption.

Manufactured products.—The value of manufactures in 1912 was estimated by adding to the value in 1909 an increase based on the increase from 1904 to 1909. The value of the exports of the principal domestic manufactures was deducted to obtain the value of manufactures for domestic use.

It was assumed that one-twelfth of the value of food-stuffs and one-half the value of other products for domestic use were in the possession of the merchants, and the value of materials and products in possession of the factories was assumed to be an amount equal to one-sixth of the gross products of the year 1912.

The value estimated to have been in the possession of the factories was assigned to the several states in proportion to the total products of their manufactories. The value of the portion assumed to have been in the hands of merchants was assigned to the states in proportion to the amount of wealth reported for them in the preceding columns.

Imported merchandise.—The value of imported merchandise in bonded warehouses and in the hands of traders was assumed to be one-half of the value of all such goods imported during 1912 into the United States, exclusive of Alaska, Hawaii, and Porto Rico. The value of the goods held in Government warehouses was assigned to the states in which such warehouses were located, and the remainder was distributed among the states in proportion to the amount of wealth in other forms reported for them.

Mining products.—The value of mineral products in 1912 was taken from the annual report of the Geological Survey. The value of pig iron and other derived products has been eliminated, as it is included

in manufactured products. On the theory that the stock of coal in the hands of the dealers at any given period is equal to one year's production, it was assumed that all of the coal produced in 1912 was on hand December 31, 1912, and that 10 per cent of all other mineral products was on hand, the remainder having been disposed of to manufacturers, etc.

Clothing and articles of personal adornment.—These articles fall into two classes: (1) Those of a perishable nature, such as clothing, furnishings, dress goods, cosmetics, perfumes, etc.; and (2) those having a more or less permanent value, such as jewelry of all kinds, watches, etc. The value shown for articles of the first class is that of these articles manufactured and imported during 1912. No deduction was made for goods of this class held as parts of merchandise stocks and shown elsewhere in Table 5, it being assumed that the value of such goods so held was covered by the increase in the value of the goods in the hands of the consumers and by the value of stock carried over from prior years. The value of articles of the second class was obtained by adding the value of the articles of this class manufactured and imported from 1902 to 1912, inclusive, to the value of such articles as were held in 1902, less one-half for loss and destruction. The result obtained from this method shows a rate of increase slightly in excess of that shown in the report on Wealth, Debt, and Taxation for the period 1900 to 1904.

To distribute the value among the states in proportion to other forms of wealth would give too high a proportion to the thinly populated states, while a per capita distribution would give too high a proportion to the densely populated states, which include a larger proportion of poor people. To equalize the distribution, the mean average between these two methods has been adopted.

Furniture, carriages, and kindred property.—To arrive at an estimate of the value of furniture, carriages, and kindred property which would be comparable with the values reported in 1904 and 1900, the reports on manufactures and the reports on exports and imports were used.

This property was divided into two classes, the first class including all such articles as were considered perishable. For articles of this class only the product of 1912 was used. The second class includes those articles which might reasonably be expected to retain a considerable portion of their original value. In this latter class are included all kinds of wood or metal household furniture, automobiles, musical instruments, carriages, sewing machines, etc., while in the former were included such articles as kitchen utensils, fancy goods, statuary, trunks and valises, etc.

In estimating the value of the articles which form a part of the permanent equipment of the home, office, public buildings, etc., the value of the products for the years 1904 to 1912, inclusive, was used, and to

this was added 20 per cent of the value of the products of this class which were on hand in 1904.

To the amount thus secured was added the value of this class of imports for the same period, and from it was deducted the value of the exports. A further deduction was made on account of loss and depreciation. To account for the stock in trade, 50 per cent was deducted from the total of the manufactures and imports for the year 1912. It is possible that some notice should be given to the increase in value over the declared value of imports and the reported value of articles manufactured in the United States, but it is believed that this increased value would be offset by the value of goods in warehouses and in transit,

and the small portion which represents actual loss to manufacturers or importers through loss and destruction in transit.

The estimate is no doubt conservative, showing, as it does, a per capita wealth of less than \$100, although the rate of increase shown is slightly in excess of that for the period from 1900 to 1904. The figures shown were secured without reference to the figures for prior years except in estimating the value of articles in use in 1904.

The value of this class of property was assigned to the several states in the same manner as the value of clothing and articles of personal adornment, as described on page 19.

NATIONAL WEALTH: 1850 TO 1912.

Bases used in estimating national wealth.—Table 6 presents the estimates of the aggregate wealth of the Nation as prepared by the United States censuses from 1850 to 1912, inclusive, and the per capita averages of the same are shown in Table 7. These estimates have been prepared upon two different bases and by a number of different methods. The estimates for 1850, 1860, and 1870 were confined to taxable real property and the personal property of private individuals, firms, and corporations. They did not include any estimates of the value of the public domain nor of other exempt realty, nor of the value of the furniture or equipment of public buildings of governments nor of charitable, religious, or educational institutions, all of which were included in the estimates for 1880, 1890, 1900, 1904, and 1912.

In order to present the totals and per capita averages for the several years in a form which approximates comparability, Tables 6 and 7 give separately the total and per capita values of taxable and exempt property as estimated for 1912, 1904, 1900, and 1890. The columns headed "Exempt" include, however, only the exempt real property; all personal property—including the furniture and equipment mentioned in the preceding paragraph, which by law are exempt from taxation—is included in the columns headed "Taxable." No separation into these two classes is given for 1880, since the only information with respect to exempt property given in the Tenth Census report is the statement that the aggregate reported for that year included an estimate of \$2,000,000,000 for exempt real property. This amount was not distributed by states in the report for 1880, and can not be separated at this time save by a more or less arbitrary method; hence no separate statement of the taxable and exempt property is made for that year.

For 1870 two values are given—one on a currency basis and the other on a gold basis; the former is the

one returned by the census of that period and the latter is 80 per cent thereof. To make the figures comparable with those of earlier and later censuses, the currency values reported at the time are reduced by one-fifth, the average value of gold in 1870 being approximately 125 per cent of the value of currency. It should be noted in passing, however, that this arbitrary reduction of the values of 1870 will not fully eliminate from the statistics of the series of years the effect of the currency inflation of 1862 to 1878, because the influence of that inflation period, so far as prices and values are concerned, continued until after 1880, and therefore necessarily affected the figures for that year, so that a comparison of the value reported for 1880 with that obtained for 1870 by reducing to a gold basis does not furnish an exact measure of the additions to our national wealth resulting from human labor during the intervening period.

In making comparisons between the several censuses the 1870 figures computed on a gold basis should be compared with the totals for each of the earlier years, and with the column "Taxable" for 1890, 1900, 1904, and 1912. In comparing the value for 1880 with those for the earlier years an allowance of about 5 per cent should be made for the \$2,000,000,000 of exempt real property in the estimate for 1880. Comparisons of the values for 1880 with those for later years can be made only by the use of the totals for those years. For the years 1890, 1900, 1904, and 1912 a threefold comparison can be made—for all property, for taxable property, and for exempt property.

Estimates for 1912, 1904, and 1900.—Table 2, which follows, affords a ready means of comparing the total values of the several classes of wealth in 1912 with those of 1904 and 1900. The classification followed in this table is more detailed than that of Tables 3 and 4, but by certain simple combinations of the figures of Table 2 the comparison may be extended to cover the

ESTIMATED VALUATION OF NATIONAL WEALTH.

21

values of 1890 and 1880. The amounts given in the first column of Table 2 are the values of property as given in Table 5, with additional details of the total values shown in the columns of that table headed "Real property and improvements," "Street railways, shipping, waterworks, etc.," and "All other." The amounts given in the two remaining columns of Table 2 were taken from preceding reports of this bureau.

TABLE 2.—ESTIMATES OF WEALTH FOR 1912, 1904, AND 1900.

FORM OF WEALTH.	1912	1904	1900
Total.....	\$187,739,071,090	\$107,104,192,410	\$88,517,306,775
Real property and improvements taxed.....	98,362,813,569	55,510,228,057	46,324,839,234
Real property and improvements exempt.....	12,313,519,502	6,831,244,570	6,212,788,930
Live stock.....	6,238,388,985	4,073,791,736	3,306,473,278
Farm implements and machinery.....	1,368,224,548	844,989,863	749,775,970
Manufacturing machinery, tools, and implements.....	6,091,451,274	3,297,754,180	2,541,046,639
Gold and silver coin and bullion.....	2,616,642,734	1,998,603,303	1,677,379,825
Railroads and their equipment.....	16,148,532,502	11,244,752,000	9,035,732,000
Street railways, etc.:.....			
Street railways.....	4,596,563,292	2,219,966,000	1,576,197,160
Telegraph systems.....	223,252,516	227,400,000	211,650,000
Telephone systems.....	1,081,433,227	585,840,000	400,324,000
Pullman and cars not owned by railroads.....	123,362,701	123,000,000	98,836,600
Shipping and canals.....	1,491,117,193	846,489,804	537,849,478
Irrigation enterprises.....	360,865,270		
Privately owned waterworks.....	290,000,000	275,000,000	267,752,468
Privately owned central electric light and power stations.....	2,098,613,122	562,851,105	402,618,653
All other:.....			
Agricultural products.....	5,240,019,651	1,899,379,652	1,455,069,323
Manufactured products.....	14,693,861,489	7,409,291,668	6,087,151,108
Imported merchandise.....	826,632,467	495,543,685	424,970,592
Mining products.....	815,552,233	408,066,787	326,851,517
Clothing and personal adornments.....	4,295,008,593	2,500,000,000	2,000,000,000
Furniture, carriages, and kindred property.....	8,463,216,222	5,750,000,000	4,880,000,000

¹ Includes wireless systems.

Estimates for 1890 and 1880.—The census reports for 1890 and 1880 estimated the value of the various forms of national wealth as shown in the tables which follow:

TABLE 3.—ESTIMATES OF WEALTH FOR 1890.

FORM OF WEALTH.	1890
Total.....	\$65,037,091,197
Real property and improvements taxed.....	35,711,209,108
Real property and improvements exempt.....	3,833,335,225
Live stock on farms, and farm implements and machinery.....	2,703,015,040
Machinery of mills and product on hand, raw and manufactured.....	3,058,593,441
Mines and quarries, including product on hand.....	1,291,291,579
Gold and silver coin and bullion.....	1,158,774,948
Railroads and equipment.....	8,296,050,034
Street railways.....	389,357,289
Telegraphs, telephones, shipping, canals, and equipment.....	701,755,712
Miscellaneous.....	7,893,708,821

TABLE 4.—ESTIMATES OF WEALTH FOR 1880.

FORM OF WEALTH.	1880
Total.....	\$43,642,000,000
Real property and improvements taxed:.....	
Farms.....	10,197,000,000
Residence and business real estate, including waterpower.....	9,881,000,000
Real property and improvements exempt.....	2,000,000,000
Live stock, whether on or off farms, and farming tools and machinery.....	2,406,000,000
Mines (including petroleum wells) and quarries, together with one-half the annual product reckoned as the average supply in the hands of producers or dealers.....	781,000,000
Specie.....	612,000,000
Railroads and equipment.....	5,536,000,000
Telegraphs, shipping, and canals.....	419,000,000
Three-quarters of the annual product of agriculture and manufactures and of the annual importation of foreign goods, assumed to be the average supply in the hands of producers or dealers.....	6,160,000,000
Household furniture, paintings, books, clothing, jewelry, and household supplies of food, fuel, etc.....	5,000,000,000
Miscellaneous items, including tools of mechanics.....	650,000,000

Estimates for 1850, 1860, and 1870.—No details of the estimates for the years 1850, 1860, and 1870 were reported, and it would be impossible at the present time to exhibit even approximately the distribution of the values for those years among the several forms of wealth shown above for 1880, 1890, 1900, 1904, and 1912. The estimates for 1850 and 1860 included the value of the slaves in the Southern states in those years.

COMPARATIVE WEALTH OF NATIONS.

Estimated wealth of different countries.—Owing to the insufficiency of official and trustworthy data pertaining to the subject, it has been impossible to prepare a summary of the aggregate wealth of all nations. The following statement summarizes the information concerning the wealth of the principal nations as it has been assembled by Augustus D. Webb, Fellow of the Royal Statistical Society, and published in "The New Dictionary of Statistics"

for 1911. The authority referred to gives the values in pounds sterling. The reduction to dollars is at the rate of \$4.8665 per pound sterling. It will be observed that the figures for the United States are those compiled by the Bureau of the Census for the year 1904. The data presented are far from comparable because of the difference in dates for which the estimates were made and the character of the data included.

COUNTRY.	Year.	Authority.	Character of data.	Amount.
United States.....	1904	Bureau of Census.....	Total wealth.....	\$107,104,192,410
British Empire.....	1903	Sir Robert Giffen.....	Total wealth.....	108,279,625,000
United Kingdom.....	1903	Sir Robert Giffen.....	Total wealth.....	72,997,500,000
Canada.....	1903	Sir Robert Giffen.....	Total wealth.....	6,599,775,000
Australasia.....	1903	Sir Robert Giffen.....	Total wealth.....	5,353,150,000
India.....	1903	Sir Robert Giffen.....	Total wealth.....	14,599,500,000
South Africa.....	1903	Sir Robert Giffen.....	Total wealth.....	2,919,900,000
Remainder of Empire.....	1903	Sir Robert Giffen.....	Total wealth.....	5,839,800,000
France.....	(¹)	Not stated.....	Private wealth.....	46,798,500,000
Denmark.....	1900	Not stated.....	Total wealth.....	1,946,600,000
Germany.....	1908	Steinman-Bucher.....	Total wealth.....	77,864,000,000
Australia.....	1903	T. A. Coghlan.....	Private wealth.....	4,578,903,000
New Zealand.....	1905	Not stated.....	Public and private wealth.....	1,605,945,000
Cape of Good Hope.....	1907	Not stated.....	Fixed property.....	428,939,492

¹ "Recently."

WEALTH, DEBT, AND TAXATION.

The data pertaining to this subject contained in Dr. Karl Helfferich's "Germany's Economic Progress and National Wealth" are summarized in the brief statement which follows. The authority quoted gives the values in marks, except those for France

which are given in francs. The rates used in the reduction to dollars were \$0.238 per mark and \$0.193 per franc. It is probable that the figures for the United States were based on the estimate of the Bureau of the Census for the year 1904.

COUNTRY.	Year.	Authority.	Character of data.	Amount.
German Empire.....	1910-11.....	Helfferich.....	Total wealth.....	\$69,020,000,000
France.....	1903.....	Edmond Théry.....	Total wealth.....	to 76,160,000,000
England.....	Not stated.....	Not stated.....	Total wealth.....	55,391,000,000
United States.....	Not stated.....	Census Bureau.....	Total wealth.....	54,740,000,000
				to 61,880,000,000
				119,000,000,000

ESTIMATED VALUATION OF NATIONAL WEALTH.

23

TABLE 5.—ESTIMATED TRUE VALUE OF ALL PROPERTY AND OF SPECIFIED CLASSES OF PROPERTY, BY GEOGRAPHIC DIVISIONS AND STATES: 1912.

GEOGRAPHIC DIVISION AND STATE.	Total.	Real property and improvements.	Live stock.	Farm implements and machinery.	Manufacturing machinery, tools, and implements.	Gold and silver coin and bullion.	Railroads and their equipment.	Street railways, shipping, water-works, etc.	All other.

PART II

NATIONAL AND STATE INDEBTEDNESS AND
FUNDS AND INVESTMENTS:
1870-1913

PART II.

NATIONAL AND STATE INDEBTEDNESS AND FUNDS AND INVESTMENTS: 1870-1913.

INTRODUCTION.

Scope of Part II.—The tables contained in Part II of this report pertain to the indebtedness of the National Government and the 48 state governments. Details with reference to the counties, cities, and other minor civil divisions are presented in Part III. No data are contained in this report pertaining to outlying possessions or dependencies of the United States, such as Alaska, Hawaii, Porto Rico, and the Philippine Islands.

Fiscal years and period of time covered.—The general table, which carries all details with reference to the 48 state governments (Table I), gives figures for 20 fiscal years wherever possible—covering the period from 1893-94 to 1912-13, inclusive. In some states only biennial reports could be secured, and in these cases alternate years are shown. In a few states only very defective and incomplete reports are available for some years, and the table brings out this fact in detail. The information presented is up to and including June 30, 1913, or the fiscal year ending during the 12 months preceding that date. The fiscal year used will be shown for each state in Table 6.

General summary, June 30, 1913.—Table 1 presents a summary of the debt and funds and investments for the National Government and the total for the 48 state governments as of June 30, 1913, or the latest date for which data are available. In this general summary the total indebtedness is divided into two classes, "funded" and "floating;" and in turn the funded debt is shown in two separate classes, "outstanding bonds" and "special debt obligations to public trust funds." In the table is also shown a summary of productive funds and investments, the total being divided into two classes according to the character of the assets, namely, "cash" and "securities." Sinking fund assets are included as one of the items which go to make up productive funds and investments; this item is also shown separately, and in turn is subtracted from the total debt shown, leaving an item properly designated as "debt less sinking fund assets." In some states it might be proper to subtract from the indebtedness shown amounts contained

in other funds than the sinking fund, but for the sake of uniformity the table following seems to be the best method of procedure.

Table 1

	Total.	The National Government.	The 48 state governments.
Debt:			
Total.....	\$3,339,001,439	\$2,916,204,914	\$422,796,525
Funded, total.....	2,943,889,898	2,540,523,329	403,366,569
Bonds.....	1,332,202,587	967,366,160	364,836,427

Securities.....	353,329,365		353,329,365
Sinking fund assets.....	1,964,621,430	³ 1,887,640,859	76,980,571
Debt less sinking fund assets:			
Amount.....	1,374,506,360	⁴ 1,028,564,055	⁵ 345,942,305
Per capita.....	14.15	10.59	3.57

¹ Certificates and notes issued on deposit of gold and silver bullion.

² Debt bearing no interest.

³ Cash in Treasury available for the payment of debt—consists of currency trust funds, gold and silver funds, and General Treasury cash.

⁴ Debt less cash in the Treasury available for the payment of debt.

⁵ Sinking fund exceeds debt \$126,351—Pennsylvania.

An examination of Table 1 shows that the total debt of the 48 state governments on June 30, 1913, or at the close of the last fiscal year preceding, was \$422,796,525. Of this, \$403,366,569 represented funded debt and \$19,429,956 floating debt. The funded debt again was divided between bonds amounting to \$364,836,427 and special debt obligations to public trust funds amounting to \$38,530,142. As an offsetting item the states had accumulated sinking fund assets amounting to \$76,980,571, leaving the debt less sinking fund assets \$345,942,305. Having in mind the population of the 48 states as estimated for June 30, 1913, the per capita debt less sinking fund assets amounted to \$3.57.

In contrast with the debt of the 48 state governments, the National Government had a total debt on June 30, 1913, of \$2,916,204,914. Of this total, the funded debt amounted to \$2,540,523,329, while the floating debt amounted to \$375,681,585. The funded debt again has been divided, for practical purposes, into two classes, of which the bonded indebtedness amounted to \$967,366,160, while the special debt obligations amounted to \$1,573,157,169. For purposes of

comparison it was necessary to consider debt bearing no interest as floating debt, and certificates and notes issued on deposit of gold and silver bullion as special debt obligations. As a result, the sinking fund assets, or cash in Treasury available for the payment of debt, consisting of accumulated trust funds, gold and silver, and General Treasury cash, not only were sufficient to entirely eliminate the special debt obligations but also to reduce the bonded debt. The debt less cash in Treasury available for the payment of debt, therefore, amounted to only \$1,028,564,055, or a per capita debt of \$10.59.

It will be seen from Table 1 that the debt of the National Government represents three-fourths of the total debt of the National and State Governments. Of the total per capita debt of \$14.15, the debt of the National Government contributed \$10.59, or 75 per cent, while the debt of the state governments contributed \$3.57, or 25 per cent of the total.

Historical summary: 1870 to 1913.—Table 2 shows for the United States and for the 48 states combined, as well as the total of these two classes, the debt less sinking fund assets or cash in Treasury available for the payment of debt for 1870 and 1880, and for each year from 1890–91 to 1912–13. In the case of states where only biennial reports were available it was necessary to assume that the debt less sinking fund assets remained the same for the two years. In the case of states where reports were intermittent or irregular, it was necessary to accept the figures for debt nearest to the year under consideration.

In order to show the general tendency of indebtedness the per capita debt less sinking fund assets or cash in Treasury available for the payment of debt is shown. This item is based upon the estimated population as of June 30, for each year, except 1870, 1880, and 1890–91, when the population as officially compiled was used.

An examination of Table 2 shows that the debt of the National Government was higher in 1870 than at any other time since that date, the per capita debt in 1870 being \$60.46. This debt in 1870 was a material decrease over the debt as it stood August 31, 1865. On that date the indebtedness of the National Government (less funds available for the payment of debt) amounted to \$2,756,431,571, which was an average of \$79.44 for every inhabitant of the country. The decrease between 1865 and 1870 continued very rapidly, and by 1880 the indebtedness of the National Government had decreased so rapidly that with the increase in population the per capita amounted to only \$38.27. Ten years later this had been reduced to \$13.60, at which point it remained with only comparatively slight fluctuations, increasing somewhat during the Spanish-American War and decreasing somewhat since that date, until at the last date reported the indebtedness of the National Government amounts to only \$10.59 per capita, or an amount slightly higher than in 1907, when the per capita indebtedness was \$10.05, the lowest amount recorded.

No data are available to show the debt of the 48 state governments, or the territory from which they have been formed, in 1865, but from Table 2 it will be seen that in 1870 the indebtedness of the 48 state governments, or their counterparts, less sinking fund assets, was \$352,866,698, or \$9.15 per capita. The indebtedness of the state governments decreased in somewhat the same proportion as the indebtedness of the National Government, and in 1880 the average per capita debt for the 48 state governments was \$5.48. Ten years later this had been reduced to \$3.37. Further fluctuations during the last 20 years brought the average down to \$2.67 in 1909, the lowest amount shown in the period covered. Since 1909 there has been more or less increase, the average per capita for the 48 state governments being \$3.57 on June 30, 1913.

Although there is a net decrease during the period covered in the actual outstanding indebtedness, a material part of the decrease in per capita debt both for the National Government and the 48 state governments is due to the very material increase in population. Considering the total debt for the National Government and the 48 state governments, the total amount outstanding decreased from \$2,684,036,654 in 1870 to \$1,374,506,360 in 1913, a decrease of almost 50 per cent. In contrast, the per capita decreased from \$69.61 to \$14.15. The lowest point in the per capita debt was in 1907, when it amounted to \$12.74.

INDEBTEDNESS OF THE NATIONAL GOVERNMENT.

Character of the national debt.—On June 30, 1913, the debt of the National Government, consisting of bonds, notes, certificates, and the national bank-note redemption account, aggregated \$2,916,204,914. This amount included only those obligations shown in the annual reports issued by the Treasury Department. The national debt is classified under three headings: Bonds, amounting to \$967,366,160; debt bearing no interest, \$375,681,585; and certificates and notes issued on deposit of coin, legal tender notes, and bullion, \$1,573,157,169.

Bonds.—Nine series of bonds were reported on June 30, 1913, all interest bearing with the exception of the first. This debt upon which all interest has ceased since maturity, amounting to \$1,659,550 in 1913, consisted of bonds of the funding loans of 1891, 1904, and 1907, and a large number of obligations matured at various dates prior and subsequent to 1861.

The bonds of the second series known as the "loan of 1925," amounting to \$118,489,900 on June 30, 1913, were issued under authority of the resumption act of 1875. This loan was made to secure gold for the reserve fund which, owing to the panic of 1893, had been greatly depleted by the redemption of a large amount of Treasury notes, by the withdrawal of gold for export, and even by the payment of a part of the current expense of the Government. The next issue, that of the "loan of 1908-1918," was authorized for the purpose of meeting the expenses of the war with Spain. The bonds of this series outstanding in 1913 amounted to \$63,945,460. The so-called "consols of 1930," amounting to \$646,250,150, were issued to refund at 2 per cent interest any of the matured bonds of the United States of the 5 per cent funded loan of 1907 and of the 3 per cent loan of 1908-1918. Three issues of Panama Canal bonds of the series 1906, 1908, and 1911, amounting to \$54,631,980, \$30,000,000, and \$50,000,000, respectively, were authorized to provide for the construction of a canal connecting the waters of the Atlantic and Pacific Oceans. An act of 1910 provided that any depositor in a postal savings depository may surrender his deposit and receive in lieu thereof the amount of the surrendered deposits in United States bonds. On June 30, 1913, there were outstanding two issues of these postal savings bonds, amounting to \$1,314,140 and \$1,074,980.

Debt bearing no interest.—On June 30, 1913, the non-interest bearing debt of the United States was composed of the following items: Old demand notes,

United States notes, fractional currency, and the national bank-note redemption account.

The "old demand notes" are part of an issue of \$60,000,000 of Treasury notes, in denominations of \$5 to \$50, made during the Civil War. On June 30, 1913, \$53,153 of these old notes were outstanding.

The United States notes were known as "legal tender notes" in 1862 and 1863, when they were authorized. After the close of the Civil War a large number of these notes were redeemed and retired, but the act of Congress approved May 31, 1878, forbade the retirement of any of these notes after that date and provided that when any of them were received into the Treasury they should be reissued. Under this law the amount of United States notes in circulation has remained at \$346,681,016. The reserve fund of the Treasury is held for the redemption of these notes.

Of the large amount of fractional currency authorized and issued during the Civil War, \$6,854,610 was reported as outstanding on June 30, 1913. This sum does not include \$8,375,934 of fractional currency estimated as lost or destroyed and omitted from the Treasury debt statement under authority of the act of June 21, 1879.

The national bank-note redemption account, amounting to \$22,092,806 in 1913, consists of balances in the United States Treasury to the credit of national banks for deposits made to redeem the circulating notes of such banks. An act of July 14, 1890, provided that all such deposits should be covered into the Treasury and that the Treasurer should redeem from the general cash all circulating notes which should come into his possession subject to redemption. This act also provided that the amount of these deposits held in the Treasury should be reported as debt in the statements of the Treasury Department.

Certificates and notes issued on deposit of coin, legal tender notes, and bullion.—Under this heading are reported certain obligations which are offset by funds held exclusively for their redemption. These consist of gold certificates amounting to \$1,086,947,169; silver certificates, \$483,550,000; and Treasury notes of 1890, \$2,660,000.

Cash in the Treasury available for payment of debt.—The total cash in the Treasury available for the payment of debt amounted on June 30, 1913, to \$1,887,640,859, and was made up of the amounts in the reserve fund, funds for the redemption of certificates, and the General Treasury fund.

The reserve fund is held for the redemption of United States or "legal tender" notes. An act of March 14,

1900, provided that a reserve fund of \$150,000,000 in gold coin and bullion should be maintained, and that if the fund falls below \$100,000,000 the Secretary of the Treasury may restore the same to the maximum amount of \$150,000,000 by the sale of bonds.

The funds for the redemption of certificates are held for the payment of gold and silver certificates and Treasury notes of 1890, and are equivalent to the amount of these obligations outstanding. These funds are referred to as "currency trust funds" in the reports of the Treasury Department. On June 30, 1913, they consisted of gold coin, gold bullion, and silver dollars, aggregating \$1,573,157,169.

The net balance in the general fund, which is the amount available for the payment of debt, amounted to \$164,483,690 on June 30, 1913. In addition to this

amount there were also large amounts of money held in the Treasury for specific purposes.

Historical summary: 1870 to 1913.—Table 3 gives a summary of the indebtedness of the United States for 1870, 1880, and also for each year from 1891 to 1913, under three general headings: Bonds, debt bearing no interest, and certificates and notes issued on deposits of coin and gold and silver bullion. Cash in the Treasury available for the payment of debt is also shown.

In each year the total debt and the classes thereof are given, as well as the cash, the total debt minus this cash, and the per capita debt. In computing the per capita figures estimates of population based on the average percentage of increase from census to census have been used, except 1870, 1880, and 1890-91.

¹ Consists of currency trust funds, gold reserve fund, and General Treasury cash.

An inspection of the table shows that the issues of bonds by the National Government were greatest in the year 1870, when the amount outstanding was \$2,050,164,363. This sum decreased until 1893 when the bonded indebtedness was \$587,131,160; then increased more or less irregularly until 1913, when it was \$967,366,160. The debt bearing no interest remained nearly the same for the entire period. Certificates and notes issued on deposits of coin and bullion indicate an increase in 1891 over that for 1870 by \$505,642,911. In the following years, however, the increase is not quite so noticeable, the amounts varying but little until 1900—from which time there is a decided increase, the maximum of \$1,573,157,169 being reached in 1913.

Cash available in the Treasury for the payment of debt, consisting of currency trust funds, gold reserve fund, and General Treasury cash, indicates a decided increase with the exception of the years 1898, 1909,

and 1910, which years report a slight reduction. The maximum amount shown is for 1913, \$1,887,640,859.

The per capita debt fluctuated, being the highest in 1870 and the lowest in 1907. In 1870 it amounted to \$60.46 per capita; within 20 years, as a result of reduction in debt and increase in population, it was reduced to \$13.60; by 1900 it had advanced to \$14.55, since which time there has been some reduction. In 1907 it amounted to only \$10.05, while the last year reported (1913) shows a per capita debt of \$10.59. The decrease from 1900 is to be attributed largely to increase of population rather than to decrease of debt.

Debt of the National Government: 1894 to 1913.—Table 4 shows the indebtedness of the National Government for each year from June 30, 1894, to June 30, 1913, thus covering a 20-year period. For each year there are given details with reference to outstanding bonds, debt bearing no interest, and other items of

indebtedness, such as certificates and notes issued on deposits of coin and bullion; also the cash in Treasury available for the payment of debt, and the various classes thereof, together with the total indebtedness less cash available for its payment.

An inspection of Table 4 shows that on June 30, 1894, the outstanding bonds amounted to only \$636,893,130. By June 30, 1899, five years later, this had increased to \$1,047,267,050. This amount decreased again more or less gradually until June 30, 1907, when it amounted to \$895,921,095, since which time the issuing of Panama Canal bonds and postal savings bonds has brought the total again to \$967,366,160 on June 30, 1913. The outstanding bonds referred to in this paragraph are interest-bearing obligations, except in the case of small amounts of bonds which remain in the hands of the Treasurer after the year of maturity, in which case the interest ceases and the bonds are held until claimed. On June 30, 1894, this class of bonds on which interest had ceased amounted to \$1,851,240. This decreased gradually until June 30, 1900, when it amounted to \$1,176,320, at which time an important loan which matured at the option of the Government was taken up so far as called for, and the debt on which interest had ceased was increased by the unclaimed amounts, bringing the total in this class again up to \$1,415,620. This amount has increased and decreased according to circumstances since that date until June 30, 1913, when it amounted to \$1,659,550. The highest amount at any time in the 20-year period covered was \$4,130,015 on June 30, 1908. The appearance of new series of bonds and the disappearance of old series during the 20-year period are shown in detail in Table 4.

In addition to the outstanding bonds, the Government recognizes debt bearing no interest to the amount of \$375,681,585, June 30, 1913. On June 30, 1894, 20 years earlier, this amounted to \$380,004,687. The largest amount recorded at any one time was on June 30, 1908, when the amount was \$426,056,398. The debt bearing no interest is made up of a considerable number of classes of debt. On June 30, 1913, these were as follows:

88488°—15—3

Old demand notes issued in 1861 and 1862, amounting to \$53,153. Most of these probably never will be presented for payment, since the amount has remained almost constant for the last 20 years, bears no interest, and probably represents largely lost documents or those held as souvenirs. The most important item in this general class are the legal tender notes, issued in 1862 and 1863. On June 30, 1913, these amounted to \$346,681,016, an amount which has remained constant during the last 20 years. Only two other items need to be mentioned here; these are fractional currency and national bank-note redemption account, which amounted to \$6,854,610 and \$22,092,806, respectively, on June 30, 1913.

The third main class into which the total debt has been divided consists of certificates and notes issued on deposit of coin, legal tender notes, and bullion. On June 30, 1894, these items amounted to \$615,355,820. Although there have been more or less changes during the 20-year period, the tendency has been a gradual increase until June 30, 1913, when the highest point was reached, amounting to \$1,573,157,169, an amount considerably more than twice as great as that 20 years earlier. During this period of 20 years, certificates of deposit issued in 1872 disappeared entirely; Treasury notes of 1890 were reduced from \$152,584,417 to \$2,660,000; silver certificates increased from \$337,148,504 to \$483,550,000; and gold certificates increased from \$66,387,899 to \$1,086,947,169.

Offsetting the outstanding indebtedness of the National Government there are three classes of cash in the Treasury available for the payment of debt. These are the reserve fund, amounting to \$150,000,000 on June 30, 1913; funds for the redemption of certificates, amounting to \$1,573,157,169; and General Treasury cash, amounting to \$164,483,690.

The total debt and the total cash in the Treasury available for its payment, as well as the amount of debt remaining after the subtraction has been made, have already been shown for each year of the 20-year period in connection with Table 3.

An important feature of the table is the year of issue of debt obligations, the year of maturity, and the nominal rate of interest.

WEALTH, DEBT, AND TAXATION.

⁴ Option.

Distribution of population and debt of National Government among states, June 30, 1913.—Table 5 shows the estimated population of the United States, by states, for June 30, 1913. The table also presents the percentage distribution of this population, thus showing what proportion of the total population is to be found in each state of the United States. While the debt of the National Government does not necessarily rest with equal weight upon all citizens of the United States and may probably rest more nearly in proportion to the value of all property in the United States, the table has been constructed in order to show the burden of taxation on the people of the different states if the debt of the National Government were distributed in proportion to population.

It appears in Table 1 that the debt of the National Government less cash available for its payment amounted to \$10.59 per capita on June 30, 1913. An inspection of Table 6 shows that Arizona and Massachusetts are the only two states where the state debt less sinking fund assets amounts to more than \$10.59 per capita. The debt of the National Government, therefore, is a greater weight upon the people of every state in the Union (excluding these two) than is the debt of the state in which they live. Further than this, it should be noted that (as explained in detail in another place in this bulletin) the large per capita debt in Arizona and in Massachusetts is due principally not to the state debt but to the contingent debt assumed by the state in the name of counties and municipalities in Arizona and metropolitan districts in Massachusetts.

The next highest per capita debt for any state is \$10.46 in Virginia, but (as noted in another part of this bulletin) this includes a very large sum properly chargeable to West Virginia, which has not yet been assumed by that state because of temporarily unsettled technicalities. In only a very small number of states does the per capita state debt amount to one-half the per capita debt of the National Government. The states falling in this class are Tennessee, with a per capita state debt of \$5.32; Rhode Island, with a per capita state debt of \$9.02, part of which is the contingent debt of the state due to the metropolitan park districts of that state; New York, with a per capita state debt of \$9.05, due largely to the cost of the Erie Canal; Nevada, with a per capita state debt of \$6.70; Maryland, with a per capita state debt of \$5.56; Louisiana, with a per capita state debt of \$7.89; Idaho, with a per capita state debt of \$5.92; Connecticut, with a per capita state debt of \$6.12; and Alabama, with a per capita state debt of \$5.95.

If the figures shown in column 3 of Table 5, which represent a distribution of the debt of the National

Government less cash available for its payment on June 30, 1913, on the basis of population in the individual states, are compared in detail with the debt less sinking fund assets for each state, as shown in Table 6, it will be seen that the burden of the national debt upon the various states is much greater, except in the cases previously noted, than is the state debt. Thus while the per capita debt for the debt of the National Government amounts to \$10.59, that for the debt of the state of Oregon is only \$0.04; for the debt of the state of Kansas \$0.14; for the debt of the state of Iowa \$0.16; and for the debt of the state of New Jersey \$0.24; while for the debt of the state of Pennsylvania it is zero, since in that state the sinking fund assets exceed the total debt.

Table 5

INDEBTEDNESS OF THE STATES: SUMMARY BY STATES.

General summary by states, June 30, 1913.—Table 6 presents, by states, for June 30, 1913, or the nearest date thereto for which figures are available, a summary of the debt and productive funds and investments for each state in the United States, as well as the total for the 48 states. In the case of indebtedness, funded and floating debt are shown separately, and under funded debt, outstanding bonds are separated from special debt obligations to public trust funds. Under funds

and investments, cash and securities are shown separately. Sinking fund assets are included under productive funds and investments, and in addition are shown separately, and also subtracted from the total debt for each state, thus leaving an item which is as nearly comparable for the 48 states as any item which can readily be segregated. The total and the per capita debt less sinking fund assets, and the fiscal year for which the report was secured, are shown for each state.

Table 6	DEBT.					FUNDS AND INVESTMENTS.			Sinking fund assets.	DEBT LESS SINKING FUND ASSETS.		Close of fiscal year.

¹ Per capita based upon population estimated as of July 1, 1912, for those states in which the fiscal years closed in that year.

² Included with municipal debt.

³ Sinking fund exceeds total debt by \$126,351.

⁴ No debt reported in West Virginia (see text statement).

The total indebtedness of the 48 state governments on June 30, 1913, or the nearest date thereto, together with other items shown in Table 6, are presented in Table 1 in connection with the indebtedness of the National Government. In Table 6 the details by states bring out the extent to which states differ from each other in their indebtedness.

The item which is most nearly comparable is that designated "per capita debt less sinking fund assets." The large per capita debt in Arizona, Massachusetts, and Virginia has already been explained and is further referred to in detail in the text pertaining to these three states, respectively.

The following states show a per capita debt less sinking fund assets of less than \$1: Arkansas, \$0.76; Florida, \$0.77; Illinois, \$0.39; Indiana, \$0.49; Iowa, \$0.16; Kansas, \$0.14; Minnesota, \$0.63; Ne-

braska, \$0.31; New Jersey, \$0.24; Oregon, \$0.04; South Dakota, \$0.58; Wisconsin, \$0.93; and Wyoming, \$0.77.

West Virginia is shown as being without debt, but reference to the special text on West Virginia and Virginia will show that ultimately West Virginia will be called upon to assume a considerable proportion of the indebtedness of Virginia, thus more nearly equalizing the reports for these two states. In the case of Pennsylvania the sinking fund assets exceed the total debt by \$126,351.

Historical summary for the 48 states: 1870 to 1913.—The following statement (Table 7) gives for 1870 and 1880—and also for each year from 1890–91 to 1912–13—the same data as shown in Table 6 for the year 1913. (Table 7 gives only the total for the 48 states, the details for each state being given separately in the following pages.)

• INDEBTEDNESS OF THE INDIVIDUAL STATES.

Classes of indebtedness.—Detailed exhibits of the indebtedness of states are shown for the 20 years 1893-94 to 1912-13, inclusive. In the tables presenting these state exhibits the debt obligations of the states are classified as funded and floating. In the text accompanying the tables there is shown an analysis of the indebtedness of each state for the fiscal year 1913 or that ending during the 12 months preceding June 30, 1913. A general idea is given of the classes of obligations reported, the various amounts, and the purposes for which the debt was incurred.

Under *funded debt* are included all those permanent and long-term debt obligations issued or assumed by the state, which bear a fixed rate of interest, and for the payment of whose principal or interest—one or both—the credit of the state is specifically pledged. The funded debt is subdivided into two classes—bonds and special debt obligations to public trust funds. Under “Bonds” are reported all long-term debt obligations, except such as are issued under conditions or for purposes requiring them to be classed as “Special debt obligations to public trust funds.” Obligations of the latter class arise when a state having received in trust a gift of money or other property, and having converted the whole or a part of the gift so received to general public uses, assumes the annual payment of interest on the amount so converted. These special obligations of certain states to the public trust funds, though constituting a portion of the funded debt, are nonnegotiable and nontransferable debt obligations, and a statement of commercial obligations of the states to be correct should omit this class of obligations.

The *floating debt* is made up of all those debt obligations for the payment of which the credit of the state is not specifically pledged by general law. These include outstanding warrants, temporary loans, short-term certificates, and private trust funds.

The figures up to June 30, 1902, are taken from the last printed report on Wealth, Debt, and Taxation, issued by the Bureau of the Census in 1907. In some instances, from 1902 on, the method of reporting differs from the former report. For all such changes an appropriate note will be found in connection with the state so affected. In a few cases the figures given in the tables differ from those found in the published reports of state authorities, which are prepared on a great many different bases. In the majority of states special obligations to public trust funds and all obligations to private trust funds are included as debt obligations. In other states these trust obligations are not included in statements of debt. To make the

tables of state debt comparable, all tables of such debt are made to include an exhibit of all special obligations to public trust funds and all obligations to private trust funds. However, in no state are deposits required by the state from insurance companies, etc., doing business in the state reported either as a debt or as an asset.

In some states the reported state indebtedness includes also obligations of counties, cities, and other minor civil divisions which have been assumed by the state. In Massachusetts and in Rhode Island the debt termed “contingent” has been incurred for the purpose of making improvements in cities and towns. These obligations, though included with the state debt proper, are met at the dates of maturity by funds maintained by the cities and towns benefited, through annual assessments. Both enabling acts admitting Arizona and New Mexico as states contained provisions for the assumption by the states of the obligations of counties and municipalities. In Arizona such obligations were actually assumed, being refunded as state bonds and sold as such. In New Mexico bonds refunding the county debts were authorized, but none were issued at the close of the year reported.

General treasury cash and assets of productive funds.—Immediately following the debt statement of each state there is presented a table exhibiting the general treasury cash and the assets of all productive funds of such state. These tables show for the 20 years (1893 to 1913, inclusive) detailed exhibits of sinking funds for all states which have established such a fund, all other funds reporting securities, cash balances in general and special funds, and any productive assets which may be held by the state treasurer for the use and benefit of the general treasury. A great number of states include all their public trust funds among their assets, a few omitting some of them. In the tables here given all known productive assets, or assets of a known value, have been included, although not shown in the published statements of the several states.

In the text which follows are presented brief summary statements descriptive of the purpose of these funds, their manner of establishment, sources of income, and the investments held by the funds. In the text relating to Maryland mention is made of unproductive assets held by the state.

Under “Sinking funds” are tabulated the cash and productive assets of all funds which are provided for meeting the interest payments of states and for the redemption of state debts.

All other funds holding productive securities as investments are tabulated separately. In no case, however, do the tables showing the assets held by funds include any statement of the value of the public lands dedicated to the purpose of the funds, but which had not been converted into cash or invested securities. In some states the value of this omitted land greatly exceeds the value of all the assets reported.

Under "Private trust funds" are included all funds of the state consisting of money or other property belong-

ing to private individuals or corporations, or to other civil divisions, held temporarily by the state as trustee for the owner and for his benefit and not for meeting state expenses. No effort has been made to secure an exhibit of these funds for all states, only those which were shown by the published state reports having been tabulated. No deposits required by the state from insurance companies, etc., doing business in the state are reported, although some state reports include these amounts.

ALABAMA.

Funded debt.—On September 30, 1912, the funded debt of Alabama consisted of bonds and special debt obligations to public trust funds. The bonds outstanding on that date were issued for refunding or exchanging earlier bonds, or for funding floating indebtedness. The special debt obligations to public trust funds are the obligations of the state to the various educational funds, the principal of which has been used for meeting the general expenditures of the state.

Floating debt.—The floating debt of the state on September 30, 1912, consisted of outstanding warrants and a temporary loan of \$100,000.

Sixteenth section fund.—The constitution of Ala-

bama provides that the income arising from the sale of sixteenth section lands shall be applied to the maintenance of the public schools. The state has used the principal of this fund, but pays interest at the rate of 6 per cent.

Surplus revenue fund.—This fund consists of Alabama's share of the "unavailable funds" of the United States Treasury, which, in 1836, by act of Congress, were placed on deposit with the various states. The principal of the fund has been used by the state, but an amount equal to 4 per cent interest upon the same is, according to law, devoted to the maintenance of the public schools.

School indemnity land fund.—This fund represents the proceeds of the sale of land certified to the state by the United States Government for the use and benefit of the townships in which the amount of land originally certified to the state for school purposes was inadequate. This fund is held by the state, but no interest is allowed thereon.

University fund.—This fund was derived from sales of land originally granted by Congress, and of 46,080 acres of state lands; the state has used the principal and pays 8 per cent interest thereon. After the erection of certain buildings this fund is to be applied to the endowment of the university.

Agricultural and mechanical college fund.—This fund

was derived from the sale of land scrip given in trust to the state by an act of Congress approved July 2, 1862. The state has absorbed the principal of this fund, but has forever pledged its faith and credit to pay 8 per cent interest thereon for the benefit of the college.

General and special funds.—The reports of the state auditor and treasurer make mention of a number of special administrative funds whose only assets were cash on hand. All these are consolidated under the designation "General and special funds."

Table 8 gives a summary of the debt, funds and investments, and sinking fund assets for each year from 1890 to 1912, inclusive, and also data for 1880. In each year the total debt is shown together with the principal general classes thereof. The same is true in the case of funds and investments. The table also shows for each year indicated the total and per capita debt less sinking fund assets. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows that both bonds and special debt obligations to public trust funds have remained nearly constant throughout the period covered. Slight fluctuations in floating debt are to be noted.

In the case of funds and investments it will also be noted that the securities have remained nearly constant in amount throughout the period, a very slight increase being noted. The cash item naturally has fluctuated more or less from year to year.

No sinking fund assets, as such, are recorded in any year, thus leaving the debt less sinking fund assets the same as the total debt. On the other hand, the population of the state has been increasing gradually, resulting in a very material decrease in the per capita debt for the state. In the 10-year period prior to 1890 the per capita debt was reduced from \$9.80 to \$8.22; during the next decade, in 1900, it was further reduced to \$6.91; by 1910 it was only \$5.88. A slight increase is noted for 1912 because of the corresponding increase in the floating debt.

ARIZONA.

Funded debt.—On June 30, 1913, the funded debt of Arizona consisted wholly of bonds, of which the greater portion were issued for funding purposes. Of such bonds, \$2,098,303 were issued to fund county and city indebtedness held at a very high rate of interest. As the credit of the territory was higher than the counties and cities holding these bonds, it obtained a much lower rate of interest and refunded them for a longer period, at the same time guaranteeing the payment of

the bonds. To provide for the payment of the principal and interest, the state board of equalization determines the tax levies of the several counties and cities.

Five series of bonds were issued for purposes other than funding, as follows: Capitol building, \$100,000; university, \$25,000; St. Louis Exposition, \$30,000; insane asylum, \$20,000; and university experiment station, \$11,000.

¹ Not reported.

Floating debt.—The only floating debt consists of outstanding warrants, the amount of which was \$66,096 for the year ending June 30, 1913.

Sinking fund.—In Arizona the sinking fund is an administrative fund for paying outstanding indebtedness and the interest thereon. Its only assets are unexpended cash balances.

General and special funds.—Under this heading are included all administrative funds whose only assets are unexpended cash balances.

Table 9 gives a biennial summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1902, and also summaries for 1903, 1904, 1908, 1912, and 1913.

In each year the total debt is shown, together with the general classes thereof. Corresponding data are shown for funds and investments including the years 1906, 1907, and 1911, for which years no reports on debt were obtained.

The table also shows for each year indicated the total and per capita debt less sinking fund assets and the total and per capita debt less sinking fund assets less county and city debt guaranteed by state. In arriving at the per capita debt, estimates of popu-

lation based on the average percentage of increase have been used.

An inspection of the table shows that there were new bond issues for a majority of the years reported. The greatest increase in the indebtedness was between the years 1892 and 1894. This is due to a large extent to the refunding by the state of the debts of counties and cities. The floating debt has been decreased until there is only a small amount in outstanding warrants.

No investments are reported, and it will be noted that for the period covered the cash increased very materially.

The sinking fund assets fluctuated, never being very large until the year 1913, when nearly \$530,000 was on hand. This is due to the fact that \$500,000 in bonds were not presented when due, the money being held for their payment at the close of the fiscal year. The per capita debt of the state has decreased from \$25.24 in 1898 to \$13.28 in 1913, due largely to the continued increase of population. For the same period, for the debt less sinking fund assets less county and city debt, the per capita debt was reduced from \$11.19 to \$4.19.

ARKANSAS.

Funded debt.—On September 30, 1912, the funded debt of Arkansas consisted of only one series of bonds, issued in 1899, at which time the total debt of the state was refunded. These bonds are all held by the permanent school fund.

Floating debt.—There is no floating debt reported.

Sinking fund.—This fund consists of a cash balance, raised by taxation and held for the reduction of the principal of the state debt and for payment of interest thereon.

¹ Not reported.

Permanent school fund.—The principal of the permanent school fund consists of the proceeds from sales of sixteenth section lands and of all other lands or property belonging to any fund for purposes of education; the proceeds from sales of property that may escheat to the state; and all grants, gifts, or devises that may be made to the state and not otherwise appropriated. Arkansas bonds are the only investments of the fund. The income from these bonds, together with the annual taxes assessed and the annual revenues of the state set apart for such purpose, is devoted to the maintenance of the public schools.

University permanent endowment fund.—This fund consists of the proceeds from the sale of county and municipal bonds held in trust by the state for the University of Arkansas, and is invested in Arkansas bonds.

General and special funds.—In the general and special administrative funds the treasurer carries besides cash balances some county scrip.

Table 10 gives a biennial summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912, and also a summary for 1880.

In each year the total debt is shown, together with the general classes thereof. Corresponding data are shown for the funds and investments.

The table also shows for each year indicated the total and per capita debt less sinking fund assets. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows a steady decrease in the bonded indebtedness from 1880 to 1898. In 1900 there was an additional issue of \$447,000, while in 1902 the total was reduced by \$73,000. During the remainder of the period the funded debt is approximately the same. The floating debt decreased steadily from 1880 to 1900, increased slightly in 1902, and disappeared altogether after 1906.

The cash has naturally fluctuated more or less from year to year; the securities were increased by \$109,457 in 1902, since which time there has been no material change.

In the case of sinking fund assets they have never been very large and do not appreciably affect the debt. However, the natural increase in the population of the state has resulted in a material decrease in the per capita debt. In the 10-year period prior to 1890 the per capita debt was reduced from \$8.46 to \$4.82; during the balance of the period it was still further reduced, and in 1912 was only \$0.76.

CALIFORNIA.

Funded debt.—On June 30, 1913, the funded debt of California consisted of bonds and special debt obligations to the permanent fund of the state university. One of the five series of bonds is an old issue, presumed to be lost, and the interest has ceased. Refunding bonds, amounting to \$2,277,500, are held by the school and university funds, and, though these bonds were due in 1893, interest is paid on them at the rate of 6 per cent. There are three series of bonds issued for purposes other than funding—San Francisco sea wall bonds, \$2,000,000; San Francisco Harbor improvement, \$1,858,000; and state highway, \$3,959,000. State highway bonds to the amount of \$100,000 are held by the state school fund, and San Francisco sea wall bonds, amounting to \$12,000, by the sea wall sinking fund.

Floating debt.—The floating debt of the state consists of outstanding warrants, payable at the pleasure of the state, and of private trust liabilities.

Sinking funds.—California has four sinking funds, which consist of moneys derived from taxation, and the assets are held to meet the interest on the outstanding bonds of the state, and to redeem the principal thereof. The San Francisco sea wall fund is the only sinking fund holding assets other than cash balances. The principal of this fund is invested in California state, county, and municipal bonds.

State school fund.—The principal of the state school fund is made up of the proceeds of sales of school lands belonging to the state and is invested in bonds

of the state, counties, cities, and school districts of California. This fund also receives the income from the estates of deceased persons fund, the principal of which is invested in city and school district bonds and held in trust by the state for the school fund.

University fund.—The permanent endowment fund of the state university is derived from the sale of 202,480 acres of land granted by acts of Congress, and certain real estate in Oakland. In this fund are included also \$100,000 paid into the state treasury by a private individual for the use of the university, on which the state guaranteed to pay to the university interest at 7 per cent. The investments of this fund consist of state bonds and a special obligation of the state in the sum of \$79,750, upon which the state treasurer is directed to pay 6 per cent annual interest until the state elects to return the amount to the endowment fund of the university.

Dissolved savings bank fund.—This fund is made up of any funds of savings banks, trust companies, or banks of deposit which may be held by any person or corporation at the end of five years after such bank has ceased to receive deposits or do business. The principal of this fund is invested in county bonds.

General and special funds.—All the cash carried in the several administrative funds of the state is reported under the designation "General and special funds."

Table 11 gives a summary of the debt, funds and investments, and sinking fund assets, from 1892 to 1913, and also for 1880.

In each year the total debt is shown, together with the general classes thereof. Corresponding data are shown for funds and investments and the total and per capita debt less sinking fund assets. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

¹ Not reported.

An inspection of the table shows the bonds to have remained practically the same until the last three years, in which years there were large increases. The special debt obligation remained the same for the entire period, and the floating debt shows a material increase.

In the funds and investments it will be noted that securities and cash increased steadily.

The sinking fund assets show a gradual increase from 1892 to 1913 and materially reduce the actual indebtedness. The per capita debt shows an increase for the period covered, due to the increase in the debt. From 1880 to 1908 it fell from \$3.62 to \$1.47, the lowest figure reached. Beginning with 1910 it has steadily increased and is \$3.83 in 1913.

COLORADO.

Funded debt.—On November 30, 1912, the funded debt of Colorado consisted of two series of bonds, both issued for funding purposes—one to fund indebtedness of the state incurred in suppressing the Leadville riots and protecting the state during the years 1896 and 1897, the other for the purpose of redeeming the outstanding certificates and other evidence of indebtedness emanating from the insurrection of 1903 and 1904. The school fund holds these bonds to the amount of \$645,300.

Floating debt.—In 1912 the floating debt was made up of outstanding warrants and outstanding certificates of indebtedness. The several state funds hold warrants amounting to \$1,560,838.

Sinking fund.—All cash held by the sinking fund has been used for the redemption of bonds.

School fund.—The school fund of the state consists of the proceeds from the sale of the sixteenth and thirty-sixth sections of each township, granted by Congress in the enabling act of 1875; the proceeds from

the sale of estates that may escheat to the state; and all grants, gifts, or devises that may be made for educational purposes. Only the interest on this fund is to be expended in the maintenance of public schools of the state, the principal being preserved inviolate. The constitution provides that the state shall supply all losses that may in any manner be sustained by this fund.

University fund.—The university fund consists of the proceeds from the sale of 72 sections of land donated by Congress, in the enabling act of 1875, for the use and support of a state university. Only the income of this fund is used for the general purposes of the university, the principal being held inviolate.

Agricultural college fund.—The principal of this fund was derived from the sale of land donated by an act of Congress approved July 2, 1862, and acts supplemental thereto, which granted the several states land or its equivalent in scrip to an amount equal to 30,000 acres for each Senator and Representative in Congress.

Internal improvement fund.—The principal of this fund is derived from the operation of certain provisions of the enabling act of Congress, March 3, 1875. That act provided that 5 per cent of the net proceeds of the sale of agricultural public lands lying within the state of Colorado, which are sold by the United States Government subsequent to the admission of the state to the Union, are to be paid to the state for the purpose of making such internal improvements as the legislature may direct.

Internal improvement land income fund.—The assets of this fund are derived from the proceeds of the sale of land granted by the United States to the state of

Colorado for specific purposes; they can not be transferred to any other fund, or appropriated to any purpose other than that for which granted.

General and special funds.—The state treasurer reports a large number of general and special funds holding cash balances as their only asset. These funds are all consolidated under the heading of "General and special funds."

Table 12 gives a biennial summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912, and also the same data for 1880.

In each year the total debt and the general classes thereof are shown.

¹Not reported.

Corresponding data are shown for funds and investments, and for each year indicated the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows that the bonded indebtedness is approximately the same until 1908, when it is reduced almost one-half, while in 1910 there was a material increase. There is no appreciable change in the amount of the floating debt during the 20-year period.

In the funds and investments the cash fluctuated between \$489,370 and \$998,145 from 1892 to 1904; during the other years it was more than \$1,000,000, reaching \$2,000,000 in 1912. The securities show little variation during the two decennial periods.

From 1900 to 1910 the state had a sinking fund, which reached its maximum, \$443,761, in 1904; during the other years the total debt was unchanged. In 1880 the per capita debt was only \$0.75, increasing to \$6.94 in 1898, but subsequently decreasing to \$3.70 in 1912, these fluctuations being due largely to the changes in population.

CONNECTICUT.

Funded debt.—On September 30, 1912, the funded debt of Connecticut consisted of one bond of an old issue upon which the interest has ceased, and two series of bonds bearing interest; one, amounting to \$3,064,000, for public buildings and highways, and the other, \$4,000,000, for miscellaneous purposes.

Floating debt.—The floating debt of the state is made up of outstanding warrants and of a number of obligations in the nature of private trusts on account of moneys received for sundry purposes and carried on the state treasurer's books as "Special funds and accounts."

School fund.—The constitution of Connecticut requires that the school fund shall be a perpetual fund, the income of which shall be used for the support of the common schools throughout the state. The income of this fund, after deducting all expenses attending its management, is annually divided and distributed by the state comptroller among the several towns in proportion to their school population. Bank stock, bonds, notes and mortgages, and real estate constitute the investments of the fund.

Agricultural college fund.—The income of this fund is paid to the Storrs Agricultural College. The principal is invested in bonds and mortgages.

Private trust funds.—These consist of small amounts of money temporarily deposited with the state treasurer—as (1) balances paid in by receivers of defunct banks, insurance companies, and other corporations; (2) special deposits required by state

statutes; and (3) certain moneys belonging to the towns and counties. The cash belonging to these accounts is merged by the treasurer with any state cash on hand.

General and special funds.—The cash balances of the general fund and of several special administrative funds are consolidated under the title "General and special funds."

Table 13 gives a summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912, and also the same data for 1880.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based upon the average percentage of increase have been used.

¹ Not reported.

An inspection of the table shows that there is no appreciable change in the bonded indebtedness until 1902, when it declined steadily until 1908. Beginning with 1909 there was an annual increase, and in 1912 the bonds outstanding amounted to \$7,064,100. The floating debt fluctuated slightly, attaining its largest proportions in 1910 and 1911. In the report of funds and investments the securities show only slight changes, while the fluctuations in cash are more marked.

No sinking fund assets, as such, are recorded in any year, thus leaving the debt less sinking fund assets the same as the total debt. The per capita debt was lowest from 1904 to 1908, due to the reduction in the funded debt and the steadily increasing population. The debt per capita reflected the fluctuations of the debt less sinking fund assets, decreasing regularly from \$7.98 in 1880 to \$0.86 in 1907, and increasing very rapidly to \$6.12 in 1912.

DELAWARE.

Funded debt.—On December 31, 1912, the outstanding funded debt of Delaware consisted of six series of negotiable bonds, a nonnegotiable bond issued to the school fund, and a nonnegotiable certificate issued to the Delaware College fund, the two latter being classed

as special debt obligations to public trust funds. Two of the series, amounting to \$245,000 and \$230,000, were issued to refund old bonds; while a third consists of certificates of indebtedness to the amount of \$20,000, issued to the sinking fund to take the place of refund-

ing bonds of 1907, held by the sinking fund as an investment until canceled in 1909. The remaining issues are for very small amounts and were issued for the following purposes: Hospital improvement, purchase of experimental farm, and buildings and repairs on same. Each of the following funds holds state bonds to the amount of \$5,000: Sinking fund, free school fund, and railroad and railway guaranty deposit fund.

Floating debt.—No floating debt is reported for Delaware for 1912.

Sinking fund.—In Delaware the sinking fund, holding state, county, and municipal bonds as assets, exists for the payment of the interest on state bonds and for the ultimate redemption of the principal thereof.

Free school fund.—The nucleus of the free school fund was Delaware's share of the "unavailable funds" of the General Treasury distributed to the states under act of Congress. In 1912 the investments of the fund consisted of state bonds, bank stock, a small cash balance, and an obligation of the state in the form of a nonnegotiable bond issued to the fund.

Delaware College fund.—This fund was derived from the sale of land scrip, donated by Congress for the establishment of a college of agriculture and the mechanic arts. Its only asset is a certificate of permanent and perpetual indebtedness, issued by the state to the trustees of Delaware College.

Railroad and railway guaranty deposit fund.—This fund consists of amounts which have been deposited with the state treasurer as guaranties of good faith by companies proposing to build railways in the state, but which have been forfeited to the state because of failures on the part of the depositing companies to fulfill the conditions of the law. The greater part of the fund has been invested in state, county, and municipal bonds and in bank stock, leaving but a very small cash balance.

General and special funds.—The cash balances of some special funds are consolidated with the balance in the general fund.

Table 14 gives a summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912, and also the same data for 1880.

¹ Not reported.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows that both bonds and special debt obligations to public trust funds have remained approximately the same throughout the

period covered. It should be noted that there has been no report of the floating debt except for the year 1898.

In the report of funds and investments the amount of securities has remained practically the same, while the cash shows the natural fluctuations.

The sinking fund assets are small, therefore the debt less sinking fund assets does not materially differ from the total debt. There is comparatively little change in the per capita debt from 1891 to 1912.

FLORIDA.

Funded debt.—On December 31, 1912, the funded debt of Florida, amounting to \$601,567, consisted of but two series of bonds, both issued for refunding purposes. All of these bonds are held by the state educational funds, in the following amounts: State school fund, \$368,167; seminary fund, \$97,600; and the agricultural college fund, \$135,800.

Floating debt.—The only floating debt reported for Florida consists of outstanding warrants, amounting to \$17,632.

State school fund.—The principal of this fund, which must forever remain inviolate, has been derived mostly from the sale of sixteenth section land, though there are other sources from which it may be derived, namely: Donations to the state when the purpose is not specified; state appropriations; escheated property or forfeitures; and a percentage from the sales of public land owned by the state. According to law, the fund is invested only in bonds, the present investments being Florida state, county, and municipal bonds, and bonds of other states. The interest from the bonds is distributed annually among the counties.

Seminary fund.—The principal of this fund consists

of the proceeds from sales of lands granted by the United States to the state to create a permanent fund for the use of two seminaries, one to be located east and the other west of the Suwannee River. This fund is invested in Florida bonds and in other state bonds, and the interest from these bonds is equally divided between the University of Florida and the Florida State College for Women.

Agricultural college fund.—This fund was derived from the sales of lands granted to the state by Congress, the proceeds of which are invested in Florida state and city bonds and in bonds of other states. The interest from these bonds is applied to the expenses of the University of Florida, successor to the Florida Agricultural College.

General and special funds.—The cash balances available for meeting the current expenses of the state are carried in a large number of funds, all of which are consolidated under the single heading "General and special funds."

Table 15 gives a summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912, and also the same data for 1880.

(1) Not reported.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows a decrease in the bonded indebtedness in 1901 and 1903; with these

exceptions the bonds were unchanged during the period. The floating debt shows slight changes until 1903, when it was reduced from \$100,000 to \$3,843, and in 1912 was still relatively insignificant.

In the funds and investments the securities show a steady increase, while the usual fluctuations are observed in the cash.

The sinking fund assets remained practically unchanged until 1902, when the entire amount was

used to pay off maturing bonds. The debt less sinking fund assets shows little change between 1890 and

1912, while, owing to increase in population, the per capita debt was reduced from \$2.89 to \$0.77.

GEORGIA.

Funded debt.—On September 30, 1912, the funded debt of Georgia consisted of bonds and special debt obligations to the university fund. Most of the bonded debt of the state was incurred originally to aid in the building of railroads and to redeem railroad bonds indorsed by the state, and nearly all of the bonds are early issues which have been refunded. Three of the earliest series, issued in 1866, 1876, and 1877, and amounting in all to only \$3,500, are long overdue and have never been presented for payment.

Of the four special debt obligations of the state to the university fund, three are in the form of bonds issued in 1881, 1908, and 1909 to the trustees of the University of Georgia in lieu of matured bonds of the state held by the university. The fourth obligation is not bonded, but represents a loan to the state of money received for the university fund from the sale of land scrip granted by the Federal Government for educational purposes. The state pays the trustees of the university 7 per cent interest on this loan.

Floating debt.—The only floating debt reported for the state consists of a temporary loan of \$200,000, outstanding at the close of the fiscal year September 30, 1912. The purpose of issue of this debt was not ascertained, but it was incurred probably to make up a deficiency in revenues.

School fund.—The only reported investment of the school fund is a part interest in the Western & Atlantic Railroad, which is owned by the state of Georgia and

leased to the Nashville, Chattanooga & St. Louis Railroad at a monthly rental of \$35,001. By the terms of the law one-half of this income accrues to the benefit of the school fund and the other half to the general fund; the estimated value is \$20,000,000 according to the estimate made by state authorities in 1912. This item, however, is not shown in the table, since it is strictly an estimate.

In its published reports the state has not in the past fixed the value of this railroad investment. The value assigned by the Census Bureau in the past has been an estimate based upon the annual rental received by the state, and the average rate of interest on state loans as determined by the market value of state bonds at the close of the year.

University fund.—The permanent fund of the state university is invested in three special state debt obligations to that fund, issued under acts of 1881, 1908, and 1909, and bearing interest, the first at the rate of 7 per cent and the other two at 3.5 per cent; and in a state loan of \$90,202, which is a balance due the university fund from the sale of land scrip granted by the General Government under an act of 1862, for the benefit of agricultural and mechanical education.

General and special funds.—The state includes with the cash of its general revenue fund stock in the Georgia Railroad & Banking Co., in the Northeastern Railroad Co., and in the Southern & Atlantic Telegraph Co.

Table 16 gives a summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912, and also the same data for 1880.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows a slight but steady decrease in the bonded indebtedness, while the special debt obligations to public trust funds remain practically unchanged. A floating debt is reported for only five years of the period.

In the funds and investments the securities remain approximately the same, if the estimated value of the Western & Atlantic Railroad property is not included.

No estimate was made by state authorities showing probable value of the Western & Atlantic Railroad property during the last 20 years until 1912, when an estimate of \$20,000,000 was made, and this estimate is included in the state reports. This item, however, is not shown in the table, since it is strictly an estimate. Between the years 1890 and 1901, inclusive, an estimate was made by the Bureau of the Census based upon the annual revenue-producing capacity of this property. The estimates made for that period are included in the tables, since the data are entirely copied from the last report compiled by the Census Bureau on this subject. No similar estimates were made, however, for the years from 1902 to 1912, inclusive.

Sinking fund assets were reported for 1895 and 1901, having been used during the remainder of the period to reduce the bonded indebtedness. The per capita debt declined steadily from \$5.69 in 1890 to \$2.57 in 1912.

IDAHO.

Funded debt.—The funded debt of Idaho is made up of a great many small issues of bonds. In nearly every case these were issued for public improvements, either for roads, bridges, or for improvements or buildings of state institutions. On September 30, 1912, the two larger issues, dated 1905 and 1911, were both for the new capitol building, and amounted to \$100,000 and \$750,000, respectively. The various state funds hold a considerable amount of state bonds.

Floating debt.—The floating debt reported outstanding warrants and a private trust obligation, in the form of the insane patients' fund.

Sinking funds.—There are three sinking funds in Idaho, each reporting a cash balance as its only asset. The public building sinking fund is derived from the sale of land granted to the state for the construction of the capitol building, while the capitol building sinking fund and the general interest and sinking fund are maintained by taxes levied for the purpose of paying interest coupons and bonds as they become due.

General school fund.—This fund consists of the following: Proceeds of school lands granted by the Federal Government; lands acquired by gift or grant from any person or corporation under any law; grants of land or money made to the state for general educational purposes; and moneys accruing to the state from the estates of deceased persons. The principal of this fund, which is permanent and can not be appropriated, is invested in real estate mortgages and state and school bonds, the interest being used for the support of the public schools.

Normal school endowment fund.—This fund is derived from the sale of land granted by the United States Government for the support of the normal schools and is invested in state and school bonds and real estate mortgages.

The principal of each of the following funds is derived in the same manner and is invested in the same kind of securities as that of the normal school endowment fund: University endowment fund, university school of science endowment fund, charitable institutions endowment fund, insane asylum endowment fund, penitentiary endowment fund, public buildings endowment fund, Academy of Idaho endowment fund, reform school endowment fund, soldiers' home land endowment fund, agricultural college endowment fund, and North Idaho Insane Asylum endowment fund.

Carey Act trust fund.—This fund consists of the surplus moneys derived from the sale of reclaimed desert lands in excess of the cost of their reclamation. The principal is invested in state and school bonds, the interest from which is applied to the reclamation of other desert lands in the state.

Insane patients' trust fund.—This fund consists of moneys taken from insane patients when they are committed to the insane asylum, and held in trust by the state treasurer until such time as the patients are discharged.

General and special funds.—The state maintains a large number of administrative funds with cash balances, all of which are reported under the heading "General and special funds."

Table 17 gives a biennial summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912, and also the same data for 1880.

In each case the total debt and the general classes thereof is shown. Corresponding data are shown for funds and investments. For each year indicated the total and per capita debt less sinking fund assets, are included in the table.

In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows a steady though approximately small increase in the bond issues throughout the period, except between 1896 and 1898, when there was a decrease of \$2,000 in this indebtedness. The total increase for the years shown is only

\$2,294,982. The floating debt fluctuated greatly, the minimum reported for the entire period being \$4,188 in 1904, and the maximum, \$285,433 in 1906.

The amount of cash varied in each biennial report, showing \$33,864 in 1890 and \$1,282,188 in 1912. The data for securities are incomplete; however, a remarkable increase is shown—\$60 in 1896 and \$3,915,916 in 1912.

¹ Not reported.

The sinking fund assets fluctuated, being as low as \$13,222 in 1898 and reaching \$431,396 in 1902. The effect of these variations in the sinking funds on the

total debt is easily apparent, while the effect on the per capita debt is somewhat modified by the changes in population and the increase in the bonded debt.

ILLINOIS.

Funded debt.—The funded debt of Illinois on September 30, 1912, consisted of a small amount of bonds due and called but not presented for redemption, and obligations to the state educational funds, classified under the designation "Special debt obligations to public trust funds."

Floating debt.—In 1912 the floating debt of the state consisted of outstanding warrants and of obligations in the nature of two private trust funds, known as the local bond fund and the unknown and minor heirs' fund.

Common school fund.—The Illinois permanent or common school fund, only the income of which can be expended for school purposes, consists of 2.5 per cent of the net proceeds from the sale of public lands in the state, together with that portion of the so-called "surplus revenue" received by the state from the General Government. With the exception of a cash balance, the only asset of this fund is an obligation on the part of the state toward the fund,

amounting to \$948,955, on account of the principal used by the state.

College fund.—The college fund is one of those funds which the state has established for the benefit and use of the state university, the others being seminary and university endowment funds. The college fund was established from 5 per cent of the net proceeds from the sale of public lands originally set apart by an act of Congress for the establishment and maintenance of a state college or university. The principal of the fund, amounting to \$156,613, has been used by the state, which annually pays 6 per cent interest thereon to the state university.

Seminary fund.—The seminary fund represents the proceeds from the sale of seminary lands originally donated to the state by the General Government for the benefit and support of an agricultural and mechanical college. The state has used the principal of this trust fund to the amount of \$59,839, and annually pays 6 per cent interest thereon.

University endowment fund.—The endowment fund of Illinois University arose from the sale of lands granted to the state by the General Government. The state has charged itself with liability for this fund to the amount of \$648,323 in 1912, and it pays the university interest upon this amount at the rate of 5 per cent.

Local bond fund.—This fund consists of moneys collected and held by the state treasurer as a sinking fund for the payment of interest on (and for the ultimate liquidation of the principal of) the bonds of coun-

ties and municipalities, under the provisions of a law authorizing the registration of such bonds with the state treasurer and the guaranty by the state of their payment.

Unknown and minor heirs' fund.—This fund is, as its name indicates, a private trust fund to be held by the state until the settlement of certain estates.

General and special funds.—All cash balances carried by the state treasurer in the general and special administrative funds are grouped under the title "General and special funds."

¹ Not reported.

Table 18 gives a biennial summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912, and also the same data for 1880.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year indicated the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows that bonds, special

debt to public trust funds, and the floating debt have remained practically unchanged throughout the period.

In the funds and investments the only securities held are those belonging to the special debt to public trust funds, while the cash shows a general increase during the period covered.

No sinking fund assets, as such, are recorded in any year, thus making the debt less sinking fund assets the same as the total debt. The changes in population are not marked, hence the per capita debt remains approximately the same.

INDIANA.

Funded debt.—On September 30, 1912, the funded debt of Indiana consisted of two classes of obligations—negotiable bonds and nonnegotiable instruments. The latter, classed as special debt obligations to public trust funds, are amounts due to Purdue University, Indiana University, and Vincennes University, as provided by the acts of 1881, 1883, and 1907, respectively. The bonded debt shows an old issue of state stock certificates, upon which the interest has ceased, and

two series of refunding bonds, amounting to \$300,000 and \$350,000; issued, the first, for the purpose of refunding the temporary refunding loan of 1885, and the second, for refunding the new statehouse loan of 1885.

Floating debt.—The floating debt is made up of outstanding warrants and of private trust obligations on account of the unclaimed estates fund and the escheated estates fund. These funds consist of small amounts of cash held by the state treasurer and, ac-

cording to constitutional provision, these moneys if not claimed will eventually become a part of the school fund.

Sinking fund.—In Indiana the sinking fund consists of a small unexpended balance of money raised for sinking fund purposes.

Common school fund.—The common school fund consists of surplus revenue, saline and bank tax funds, funds derived from sale of county seminaries and property or money held by such, and all funds appropriated to common schools; of taxes assessed for school purposes, fines assessed for breaches of penal laws, forfeitures which may accrue, escheated estates, proceeds from sale of swamp lands granted by Congress, and all other lands granted to the state for no special object.

The principal of the common school fund, with the exception of a very small cash balance which has never been apportioned, is deposited with the various counties of the state to be invested by them in real estate. They are required by law to make good any losses in the amount intrusted to their keeping and to pay the state 6 per cent interest thereon, whether invested or not invested.

Congressional township school fund.—This fund, which consists of money derived from the sale of congressional school lands, is deposited with the counties.

Indiana University endowment fund.—This fund consists of a small cash balance and an obligation of the state in the form of a nonnegotiable bond, amounting to

\$144,000, issued by the state to the fund in return for the loan of that amount. The income of this fund is applied to the expenses of the University of Indiana.

College fund.—The college fund is derived from the sale of lands located in Monroe and Gibson Counties, given Purdue University as an endowment fund. The fund holds real estate mortgages to the amount of \$1,118, but the greater portion of the principal is deposited with the counties.

Purdue University endowment fund.—This fund was derived from the sale of land scrip granted by acts of Congress. The state has used the entire principal of the fund, but has issued to the fund in lieu thereof a nonnegotiable bond to the amount of \$340,000, the interest of which is to be used for Purdue University.

Vincennes University bonds fund.—The principal of this fund, consisting of the proceeds from the sale of lands granted by Congress, has been used by the state, but the fund holds in lieu thereof state bonds amounting to \$120,548, the interest of which is devoted to the maintenance of Vincennes University.

Private trust funds.—The assets of the funds included under this heading—the unclaimed estates fund and the escheated estates fund—consist of cash held to their credit in the state treasury.

General and special funds.—Under "General and special funds" are reported all cash balances of general and special administrative funds.

Table 19 gives a summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912, and also the same data for 1880.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year indicated the

total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows a steady decline in outstanding bonds, amounting to more than \$7,000,000

during the period. The special debt to public trust funds remained unchanged until 1907, when the amount was slightly increased. The floating debt fluctuated constantly, although the general tendency was to increase.

In the funds and investments the securities show a steady increase, and amounted to \$12,654,685 on September 30, 1912. The most marked change in the items of cash occurred in 1907, when there was an

increase of nearly \$500,000 over the amount reported for 1906.

No sinking fund assets, as such, are recorded for 11 years of the period covered by this report, and at no time is the fund sufficiently large to have any appreciable effect upon the total funded debt. The per capita debt decreased from \$3.91 in 1890 to \$0.49 in 1912, due almost wholly to the great reduction in the bonded indebtedness.

IOWA.

Funded debt.—The only funded debt in Iowa on June 30, 1913, is the state obligation to the school fund, amounting to \$10,937. The state pays interest at the rate of 6 per cent upon this obligation, which was issued to reimburse the school fund for losses sustained through the action of state officials.

Floating debt.—Outstanding warrants, to the amount of \$345,733, constitute the only floating debt.

Permanent school fund.—The permanent school fund of Iowa is derived from 5 per cent of the net proceeds of the sale of public lands; the proceeds of the sale of 500,000 acres of land granted under an act of Congress in 1841; the proceeds of the sale of in-

testate estates which escheats to the state; and the sale of the sixteenth section of each township, or land granted in lieu thereof. The greater portion of this fund is deposited with the counties for investment. The fund also holds a special debt obligation of the state.

Agricultural college endowment fund.—This fund was derived from the sale of land granted by an act of Congress passed July 2, 1862. It is invested in mortgage securities.

General and special funds.—On June 30, 1913, these funds consisted of real estate and notes to the amount of \$978 and of cash to the amount of \$1,693,431.

¹ Not reported.

Table 20 gives a biennial summary of the debt, funds and investments, and sinking fund assets, from the years 1891 to 1913, and also the same data for the year 1880.

An inspection of the table shows the state to be without any bonded indebtedness after 1880. The special debt to public trust funds was decreased from

\$245,435 in 1880 to \$10,937 in 1893, and remained unchanged during the rest of the period. The floating debt varied with each year reported, reaching the maximum amount, \$447,636, in 1897.

In the funds and investments the securities show slight change. The cash fluctuated between \$74,187 in 1880 and \$1,693,449 in 1913.

No sinking fund assets, as such, are recorded in any year, thus leaving the debt less sinking fund assets the same as the total debt. The general tendency of

the total debt was a decrease from \$545,435 in 1880 to \$356,670 in 1913. The per capita debt decreased from \$0.34 in 1880 to \$0.16 in 1913.

KANSAS.

Funded debt.—The only funded debt reported for Kansas on June 30, 1913, consisted of two series of refunding bonds. All of these bonds, to the amount of \$370,000, are held by the common school fund.

Floating debt.—Kansas did not report any floating debt in 1913.

Sinking fund.—In 1913 the greater part of the sinking fund consisted of a cash balance derived from taxation for meeting the interest and for the redemption of maturing debt obligations. This fund also holds United States consols of 1895 to the amount of \$23,000.

Common school fund.—The school fund, which is permanent and can not be diminished, is made up of the sixteenth and thirty-sixth sections in each township; 5 per cent of the net proceeds from the sale of public lands within the state; and the estates of persons dying without heir or will. The principal is invested in Kansas state, county, municipal, and school district bonds. The income from these bonds, together with all rents and interest on the sales of school lands, and such other revenues as the legislature may provide by taxation or otherwise, constitute the annual fund for distribution to the common schools.

University fund.—This fund consists of the proceeds derived from the sale of lands granted by Congress in the "act of admission," approved in 1861. The only investments are county and school district bonds.

Agricultural college fund.—This fund, which was

derived from the sale of lands granted by Congress, is invested in county, municipal, and school district bonds.

State normal school fund.—By the act of the state legislature establishing the state normal school, all the salt lands granted by Congress to the state were set apart to form a perpetual endowment fund for the normal school. The principal of this fund, consisting of the proceeds from the sale of these lands, is invested in county, municipal, and school district bonds.

Stormont Medical Library fund.—This fund of \$5,000 was presented to the state of Kansas by Mrs. Jane C. Stormont for the purpose of establishing and maintaining a medical library for the use and benefit of the people of the state, and particularly of the medical profession. The gift was made upon the condition that said sum should remain a perpetual fund and the interest and accumulations thereof be expended in the purchase of books, charts, magazines, etc., relating to the science of medicine and surgery. The fund is invested in township and school district bonds.

General and special funds.—The cash balances of all administrative funds are reported under the common designation "General and special funds."

Table 21 gives a summary of the debt, funds and investments, and sinking fund assets, from 1892 to 1913, and also the same data for 1880 and 1892. There is no report for 1893.

¹ Not reported.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year indicated the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows a steady though small reduction in the bonded indebtedness. The

floating debt was small and decreased each year until it disappeared altogether in 1901.

In the funds and investments both cash and securities show a general increase throughout the period.

The sinking fund assets are comparatively small, hence the debt less sinking fund assets does not materially differ from the total debt. The per capita debt declined steadily from \$0.73 in 1892 to \$0.14 in 1913, due to the reduction in bonded indebtedness.

KENTUCKY.

Funded debt.—On June 30, 1913, the funded debt of Kentucky was made up of four issues of nonnegotiable bonds and one small issue of negotiable bonds, long overdue but never presented for redemption. Of the series of nonnegotiable bonds, classed as "Special debt obligations to public trust funds," three are held by the school fund and the fourth by the state university fund. Of the obligations to the school fund, one, issued in 1870 and amounting to \$1,327,000, is perpetual; the second, for \$381,986, represents the state's obligation by reason of the surplus school revenue due the counties; and the third, amounting to \$606,641 and issued to the state board of education under an act of the legislature, is equal to the amount of the direct tax refunded to the state by the United States Government. Interest is paid on these bonds at the rate of 6 per cent, and this income is devoted to the public schools. The fourth bond, amounting to \$165,000, was issued to take up maturing state bonds held by the agricultural college and normal school funds, and the interest thereon is paid to the state university.

Floating debt.—The floating debt of Kentucky June 30, 1913, consists of outstanding warrants amounting to \$1,965,153.

Sinking fund.—The income of the sinking fund from taxation is fixed by statutory law and can not be diminished until the debt of the state is paid. The only asset of this fund June 30, 1913, was a cash balance of \$10,307.

School fund.—The largest investment of the school fund, amounting to \$2,315,627, consists of obligations of the state to the school fund on account of moneys borrowed or state bonds canceled. The amount made up by the interest from these obligations, the income from bank stock having a par value of \$73,500, together with an annual tax levy for school purposes, is annually apportioned among the counties and school districts according to their school population.

State university fund.—This fund, derived from the proceeds of the sale of land scrip granted as an endowment fund by an act of Congress, is invested in a state obligation to the fund in the form of a perpetual non-negotiable bond, bearing interest at the rate of 6 per cent. The income from this fund and an annual assessment upon all taxable property in the state are applied to the support of the state university.

General and special funds.—The cash in the general fund amounted to \$66,047 on June 30, 1913.

¹ Not reported.

Table 22 gives a summary of the debt, funds and investments, and sinking fund assets, from 1891 to 1913, and also the same data for 1880.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year indicated the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows a marked reduction in the bonded indebtedness during the period covered, although the amount was considerably increased from 1898 to 1902. The special debt to public trust funds

remains practically unchanged, while the floating debt shows material increase.

In the funds and investments the cash shows a slight general increase. The securities fluctuated until 1903, when there was a reduction of nearly \$1,000,000, after which the amount remains unchanged.

The sinking fund assets varied with each year, increasing to \$1,157,777 in 1902 and decreasing to \$10,307 in 1913. The total debt less sinking fund assets shows a general increase from \$1,094,424 in 1880 to \$4,441,867 in 1913. The per capita debt increased from \$0.66 in 1880 to \$1.90 in 1913, due to the small percentage of increase in population and the material increase in the total debt.

LOUISIANA.

Funded debt.—On December 31, 1912, the funded debt reported two series of bonds issued to refund prior indebtedness, and commonly designated as follows: "Consolidated bonds," amounting to \$11,006,600; and "constitutional bonds," amounting to \$101,700; also certificates of indebtedness to the amount of \$910,728. The state is also under obligation to the free school fund, the seminary fund, and the agricultural and mechanical college fund. These obligations, classed as "Special debt obligations to public trust funds," were incurred on account of the appropriation by the state of the proceeds of sales of lands granted by the United States for the use and support of free public schools, of a seminary of learning, and of a college for the benefit of the agricultural and mechanical arts. These three amounts, held by the state as loans, are to remain perpetual funds, on which the state pays interest at the rate of 4 per cent.

Floating debt.—Outstanding warrants to the amount of \$76,324 and a small private trust fund of \$1,617 constituted the floating debt of Louisiana in 1912.

Free school fund.—The free school fund was established from the sale of lands granted by the United States for the support of schools, from 10 per cent of the net proceeds from the sale of state public lands, and from escheated estates. On December 31, 1912, the fund was invested in Louisiana bonds and levee district bonds, and in a perpetual loan to the state amounting to \$1,130,868, bearing interest at the rate of 4 per cent. The fund is increased frequently by the sale of lands originally granted to the state, the proceeds from such sales being invested in state or levee district bonds in accordance with the provisions of a number of state statutes. The income from this fund, together with the state school tax and certain other revenues, are distributed annually among the townships on the basis of school population.

Seminary fund.—The debt due by the state to the seminary fund is \$136,000, being the proceeds from

the sale of lands heretofore granted by the United States for the use of a seminary of learning; on this debt the state pays an annual interest of 4 per cent. This state obligation is the only asset of the fund.

Agricultural and mechanical college fund.—The debt due by the state to the agricultural and mechanical college fund amounts to \$182,313, being the proceeds from the sale of lands and land scrip heretofore granted by the United States to the state for the use of a college of agriculture and the mechanic arts. The amount is placed to the credit of said fund on the books of the auditor and treasurer of the state as a perpetual loan, the state paying an annual interest of 4 per cent thereon. The debt due from the state is the only asset of this fund.

General and special funds.—Under this heading are included the cash balances of the large number of state administrative funds which are carried on the books of the fiscal officers of the state.

Table 23 gives a biennial summary of the debt, and debt less sinking fund assets from 1892 to 1912; an annual summary of the funds and investments, from 1890 to 1901, with a biennial report from 1901 to 1912; and also a report of the debt, funds and investments, and debt less sinking fund assets for 1880.

In each year indicated the general classes of the total debt, funds and investments, and the per capita debt less sinking fund assets are also shown. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows that both bonds and special debt obligations to public trust funds have remained practically unchanged throughout the period covered. A slight decrease is observed in the floating debt.

In the funds and investments the securities show a general increase, though the maximum of \$2,683,129 was reached in 1912. The cash fluctuated between \$245,833 in 1880 and \$1,419,322 in 1907.

¹ Data pertaining to debt are for the fiscal year ending March 1 except last year reported.

No sinking fund assets, as such, are recorded in any year, hence the debt less sinking fund assets is the same as the total debt. The per capita debt decreased

steadily from \$13.52 in 1892 to \$7.89 in 1912, due to the decrease in the amount of funded debt and an increase of about 600,000 in population.

MAINE.

Funded debt.—On December 31, 1912, the funded debt of Maine consisted of but one series of negotiable bonds and of several special debt obligations to public trust funds. The negotiable bond issue, amounting to \$700, is for old bonds due but not presented for payment. Of the nonnegotiable obligations of the state, three exist by virtue of acts of the legislature approved March 7, 1889. The state received from the Maine Insane Hospital the sum of \$50,000, bequeathed to it by the Hon. Abner Coburn, which was applied to the payment of the state debt, and a nonnegotiable registered bond for a like sum, bearing interest at 4 per cent per annum, was issued to the hospital. The state also received from the Maine State College of Agricultural and Mechanical Arts, situated in Orono, \$100,000, bequeathed to it by the Hon. Abner Coburn. This was applied to the payment of the state debt, and a nonnegotiable registered bond for a like sum, bearing interest at 4 per cent per annum, was issued to the college. Authority was given to issue a nonnegotiable registered bond in favor of the state college of agricultural and mechanical arts for \$118,300, bearing interest at 5 per cent, for which a like amount of war and other debt held by the college was retired. The special debt obligations to trust funds, other than the three above described, represent moneys received as public trusts and converted to state uses. These obligations are shown on the accounts of the state officials as balances due the several funds, but no certificates or bonds have been issued therefor. The aggregate of all

obligations to trust funds on December 31, 1912, is \$1,254,298.

Floating debt.—No floating debt is reported for Maine in 1912.

Permanent school fund.—This fund consists of the moneys received from the sale of lands set apart for the support of schools, or from notes taken therefor, and of any moneys appropriated for the same purpose. A sum equal to 6 per cent of the amount of this permanent school fund, and one-half the sum received by the state from the tax on the franchises of savings banks, and one-half the sum assessed upon the deposits of trust and banking companies, are required by statute to be annually appropriated to the support of the common schools. This income from the permanent school fund and the appropriations from the sources above mentioned are annually apportioned by the state treasurer among the towns in proportion to the number of children therein between 5 and 21 years of age.

Madawaska territory fund.—As provided by law, there is held in trust by the state the sum of \$5,000 for the benefit of the inhabitants of the Madawaska territory, as their share of the surplus revenue distributed to the inhabitants of the state in 1837, said sum to constitute a permanent fund, on which 6 per cent is paid annually for the support of the schools in the territory.

Madison school district fund.—This fund of \$1,000 was derived from a state bond, which the treasurer was directed to receive in trust for school district No. 2 in

the town of Madison. Interest at the rate of 5 per cent is to be paid to the district for all time to come.

Agricultural college fund.—This fund consists of two nonnegotiable bonds, amounting to \$118,300 and \$100,000, bearing interest at the rates of 5 and 4 per cent, issued by the state to the agricultural college in return for moneys used in payment of the state debt.

Foxcroft Academy fund.—By act of legislature, there is held in trust for the use and benefit of Foxcroft Academy the sum of \$1,000, upon which interest at the rate of 6 per cent is payable annually to the trustees.

Hebron Academy fund.—This fund was created by act of legislature when the sum of \$1,000 was appropriated to be held in trust by the treasurer for the use and benefit of Hebron Academy. Annual interest at the rate of 6 per cent is to be paid to the trustees of the academy.

Houlton Academy fund.—This fund of \$2,000 is held in trust for the use and benefit of Houlton Academy from funds arising from the sale of timber and lumber, the legislature appropriating same for educational purposes. Interest at the rate of 6 per cent is payable annually to the trustees.

Reform school fund.—This fund was established by a gift reported as the "Sanford legacy." The principal, amounting to \$700, was diverted to general purposes by the state, which pays 6 per cent interest thereon annually to the "state school for boys."

Insane hospital fund.—The assets of this fund consist of a nonnegotiable state bond for \$50,000 and state obligations on account of two amounts of \$1,000 each, bequeathed to the fund by the Hon. Abner Coburn and Joseph H. Williams, but used by the state for other purposes. The state pays interest at the rate of 4 per cent annually on these obligations.

Public land fund.—This fund of \$379,800 has been received from the land agent, being the amount collected by him from time to time on account of sales of timber and grass on reserved lots in unincorporated townships. The principal has been used, but the interest paid annually by the state is devoted to the support of schools in said townships.

Maine Industrial School for Girls fund.—This fund is made up of four gifts or legacies bequeathed by individuals to be held in trust for the Maine Industrial School for Girls, the income to be turned over to the school.

Education of deaf, dumb, and blind fund.—This fund was established by a gift known as the "Sanford legacy." The principal, amounting to \$600, has been used for other purposes, but 6 per cent interest on said legacy is devoted toward the education of the deaf, dumb, and blind natives of Maine.

Jordan forestry fund.—This fund of \$1,000 was accepted by the legislature for the purpose of encouraging the cultivation of forest trees. The income is utilized for prizes to be offered once every 18 years for the best lots of young forest growth in the state.

Robie trust fund.—This fund of \$4,000, all of which is invested in bank stock, was accepted as a gift from ex-Governor Robie, the same to be held in trust for the benefit of the Eastern Maine Insane Hospital as a permanent amusement and library fund, the annual income thereof to be paid to the treasurer of the hospital.

Carleton orcharding trust fund.—This fund, comprising a \$1,000 railroad bond and \$152 in cash, was received as a gift and is held in trust by the state. Every fifth year the accrued interest is to be used as a prize for the promotion of scientific orcharding in Maine.

Penobscot and Passamaquoddy Indian funds.—These funds were originally derived from sales by the land agent of timber and grass from Indian Township and sales of land purchased by the state from the Penobscot tribe. To the proceeds of these sales there have since been added receipts from leases of the shores of islands in Penobscot River now occupied by the tribe. The principals of these funds, to the amount of \$109,535, have been diverted by the state to general purposes.

General and special funds.—The cash balances of all administrative funds are consolidated and reported under this heading.

Table 24 gives a summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912, and also the same data for 1880. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows a steady decrease in the bonded indebtedness from \$5,850,500 in 1880 to \$700 in 1912. The special debt to public trust funds show a gradual increase from \$702,184 in 1880 to \$1,254,298 in 1912, while the floating debt indicates quite a fluctuation for the same period.

In the funds and investments the securities show a small general increase. The cash fluctuated naturally, the largest amount reported being \$637,678 for 1903.

No sinking fund assets, as such, are recorded in any year indicated, with the exception of an amount of \$1,166,159, reported in 1880. Hence the debt less sinking fund assets is the same as the total debt from 1890 to 1912. The per capita debt shows a marked decrease, from \$8.49 in 1880 to \$1.67 in 1912, due wholly to the decrease in the total debt.

MARYLAND.

Funded debt.—On September 30, 1912, Maryland's funded debt, which consisted wholly of bonds, amounted to \$13,035,750. Of these bonds the largest issue, amounting to \$3,191,095, is a refunding series, commonly known as the "consolidated loan of 1899." All the remaining bonds, with the exception of a very small series long overdue but never presented for payment, were issued at different times between 1900 and 1912, either for public buildings or for public roads and highways. The sinking fund and the school fund hold as investments state bonds to the amount of \$5,596,889.

Floating debt.—There is no floating debt for the state of Maryland.

Sinking funds.—The laws authorizing the several issues of bonds contained provisions for the payment

of the same by sinking funds, for the establishment of which special tax levies were made. State bonds aggregating \$5,305,129 constitute the greater portion of the investments of these funds, though county and municipal bonds in very much smaller amounts are also held as such.

School fund.—All donations or bequests of money or personal property and all grants or legacies of lands for the benefit of state schools are held in trust for the several counties by the state board of education. The fund thus created amounted on September 30, 1912, to \$520,520, and is invested largely in state bonds and in stock of the Baltimore & Ohio Railroad. The income is distributed to the counties in proportion to the amount held to the credit of those counties.

General and special funds.—In 1912 the general and special administrative funds aggregated \$3,326,230, of which \$1,500,000 represents a mortgage of the Northern Central Railway Co. The income from this investment is applied to the general expenditures of the state.

Unproductive assets.—In addition to the productive assets shown, the Maryland treasury holds a large amount of unproductive securities which have been acquired from time to time in aid of internal improvements. These consist of a \$1,000,000 mortgage of the Susquehanna & Tidewater Company, and small amounts of turnpike, bridge, and canal stock.

Table 25 gives a summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912, and also the same data for 1880.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, esti-

mates of population based on the average percentage of increase have been used.

An inspection of the table shows that the funded debt consists wholly of outstanding bonds. The amount shows a general decrease until 1907, after which there were new issues each year, until in 1912 the total bonds amounted to \$13,035,750.

In the funds and investments the securities fluctuated throughout the period, though the general tendency was to increase. The same conditions obtained in regard to the cash, hence the total funds and investments in 1912 show an increase of more than \$5,000,000 over the amount in 1880.

The sinking fund assets show a general increase, and, being unusually large, the debt less sinking fund assets is materially less than the total debt. The per capita debt shows a general decrease from \$11.89 in 1880 to \$1.54 in 1908, increasing again to \$5.56 in 1912. These fluctuations are due largely to the changes in the funded debt.

MASSACHUSETTS.

Funded debt.—On November 30, 1912, the funded debt of Massachusetts, consisting of negotiable bonds of numerous issues, amounted to \$117,134,662. For convenience, this debt has been divided into (1) the direct debt, which is an obligation incurred for the benefit of the entire state, and (2) the contingent debt, which, while a direct debt of the state, has been incurred for the benefit of 41 cities and towns in the vicinity of and including Boston, called the metropolitan district.

This debt, termed "contingent," was incurred by the state to aid in the administration of certain improvements, such as the construction of water, sewer, and park systems, etc. The various cities and towns benefited refund this amount to the state, by means of sinking fund assessments levied by state boards of commissioners and paid at the same time and in the same manner as state taxes, the annual payments being sufficient to accumulate at the maturity of the bonds a fund equal to their face value. The annual interest charges on these loans are borne by the municipalities and are paid in the same manner as the sinking fund installments.

In 1893 it became necessary to realize on the Fitchburg Railroad securities held by the sinking funds, in order to retire bond issues then due and payable. An issue of state bonds, known as the "Fitchburg Railroad securities bond issue," was sold for the purpose of purchasing these railroad bonds, and the proceeds were placed to the credit of the various sinking funds.

The total direct debt, the amounts of the bond issues, and the purposes for which issued, are given in the following statement.

Total direct debt.....	\$42,791,583
Purchase of Fitchburg Railroad securities.....	5,000,000
Abolition of grade crossings.....	11,249,000
State highways.....	6,965,000
Medfield Insane Asylum.....	1,469,800
Metropolitan parks (series 2).....	2,567,500
Statehouse purposes—construction, grounds, etc.....	2,285,000
Massachusetts Hospital for Consumptives.....	765,500
Massachusetts Hospital for Epileptics.....	666,450
Harbor improvement.....	500,000
Equipment of volunteers for Spanish-American War..	1,240,000
Prisons and hospitals.....	6,240,500
Suffolk County courthouse.....	262,333
Armory buildings.....	3,580,500

Bonds were issued for the abolition of grade crossings under two acts: One, providing for such cities and towns as might wish to comply with said act; and the other, for the abolition of certain crossings of the Boston & Providence Railroad in the city of Boston. The first act stipulated that the railroads should pay 65 per cent of the cost of such alterations, the remaining 35 per cent being divided between the state and the city or town. Under the second act the state was to repay the railroad 45 per cent of the cost of the work and the city was to repay the state 30 per cent of the amount paid the railroad.

Twenty-five per cent of the amount realized by the sale of the highway bonds is to be repaid to the state by the counties wherein the highway is located, but this loan is not classed as a contingent debt of the state, as the money repaid the state is a small part of the total loan and is not applied to its payment.

The metropolitan parks loan (series 2) is partly direct and partly contingent debt of the state, and is discussed under the latter heading.

The proceeds of those issues of bonds commonly known as "war loans" were used in defraying the expenses of equipping the state's quota of volunteers for military and naval service in the war with Spain and in providing pensions for the families of those enlisted men who lost their lives while in the service of the United States.

The state loaned its credit to provide funds for an addition to the Suffolk County courthouse in Boston, although it is to pay but one-third of the loan, collecting the other two-thirds from the city of Boston, and is to turn over its ownership in the building, when completed, to the county of Suffolk.

The loans providing for the building of armories for the Massachusetts Volunteer Militia were originally classed as contingent debt, for, though the state built the armory, the city in which it was located paid the state annual installments sufficient to meet the interest charges on the bonds and to establish a sinking fund for their redemption. When the state assumed the burden of the armories on December 2, 1907, taking them from the cities where they were located, the bonds issued for armory purposes were transferred from the contingent to the direct debt.

The total contingent debt, the amounts of the bond issues, and the purposes for which issued are given in the following statement:

Total contingent debt.....	\$74,343,079
Metropolitan sewerage system.....	15,502,912
Metropolitan parks.....	9,548,000
Metropolitan parks (series 2).....	2,567,500
Metropolitan water system.....	41,783,000
Charles River basin.....	4,417,000
Suffolk County courthouse.....	524,667

State bonds providing for metropolitan parks were issued for the acquisition and maintenance of park places in certain cities and towns, which constitute the metropolitan park district, for the purpose of creating open spaces for exercise and recreation. An act of 1894 provided for the construction of roadways and boulevards by the state park commission, and authorized the issue of state bonds known as the metropolitan parks loan (series 2) to defray the cost thereof. One-half the expense of construction, care, and maintenance was to be borne by the state, and one-half by the cities and towns of the metropolitan park district. The metropolitan water and sewerage system bonds were issued for the purpose of providing for a water supply and for the construction of main sewers for certain cities and towns. The Charles River basin loan provided for the construction of a dam across the Charles River, between the cities of Boston and Cambridge. Two-thirds of the bonds issued to provide for an addition to the Suffolk County courthouse are classified as contingent debt, and the remaining ones are treated as a direct debt.

On November 30, 1912, the various state funds held as investments state bonds to the amount of

\$15,566,662. The sinking funds, for the redemption of direct and contingent debt, held \$14,787,662 of these bonds, and the remainder were investments of the trust and the loan funds.

Floating debt.—Private trust obligations, in the nature of several funds amounting to \$322,329, held in trust by the state for various purposes, and temporary loans, aggregating \$346,000, borrowed in anticipation of the issue of state bonds, constitute the floating debt of the state.

Sinking funds.—Massachusetts reports many sinking funds. For each act authorizing an issue or issues of bonds to secure funds for some new purpose there is provided also a new sinking fund to pay the interest on and to redeem at maturity all bonds issued for such a purpose. The sinking funds for the redemption of the direct debt are made up of the premiums on the bonds sold and annual appropriations from the state treasury, which together with the earnings of the funds will be sufficient to extinguish the debt as it matures. The sinking funds established for the payment of the contingent debt are composed of the premiums received on bonds sold, transfers from other funds, etc., and the annual assessments on the metropolitan district. Amounts, sufficient with their accumulations to redeem the contingent debt at maturity, are apportioned to the cities and towns benefited, these amounts to be paid into the treasury at the same time and in the same manner as the state tax.

On November 30, 1912, the various sinking funds were invested separately, but the securities and cash balances held by them are grouped under one heading and aggregate \$38,251,901.

School fund.—This fund was created in 1834 by appropriations to aid in the support of public schools, and from time to time further appropriations from the state and from the United States have been added until, according to law, they ceased when the principal equaled \$5,000,000. The principal is invested in county and municipal bonds and notes and in railroad bonds.

Trust funds.—The treasurer of the state has been empowered to receive and hold in trust a great many funds for various purposes. The largest of these is the harbor compensation fund, created for the protection and development of certain flats and lands in the harbors of the state. The principal of \$634,028 is composed of money paid for wharfage rights, and the income is used to improve the several harbors.

In 1878 the commonwealth flats improvement fund, amounting to \$466,014, was created for the purpose of filling in Back Bay lands in South Boston for railroad and commercial purposes. The receipts of the fund consist of rents from and sales of reclaimed lands, appropriations by the legislature, and income from investments; payments are made for dredging, filling, and such expenses as are incidental to the reclamation of overflowed lands.

The land registration fund provides that parties desiring to register land under the provisions of this act shall deposit with the recorder an amount equal to one-tenth of the assessed valuation of the land. This money is paid to the treasurer and by him invested and held as an assurance fund, the income of which is to be used to augment the principal until it shall amount to \$200,000. After this sum has been accumulated the income shall be used to defray the expenses of the administration of the act. The principal is held for the benefit of any person who may have been unlawfully deprived of his interest in land by the registration, and the fund is liable for a share of the damages awarded by the courts for such deprivation. In 1912 the fund had reached the sum of \$191,922.

The Millicent Library fund consists of \$100,000, given to the state by Henry H. Rogers for the support of a public library in Fairhaven, and is invested in a Massachusetts bond.

The technical educational funds, representing the "United States grant" and the "commonwealth grant," amount to \$219,000 and \$142,000, respectively. These were made in 1863 for the purpose of improving and aiding technical education.

Other trust funds, whose principals amount to \$100,000 or more, are as follows: Larz Anderson bridge, motor vehicle fees, reformatory for women industries, state prison industries, unclaimed savings bank deposits, school fund income, and Salem State

Normal School. There are many funds smaller than these. The aggregate of all trust funds on November 30, 1912, is \$4,080,019, and the greater part of this amount is invested in state, county, and municipal bonds and notes, and in railroad bonds and stock.

Loan funds.—These funds represent the unexpended balances of moneys received from the sales of bonds, issued either directly for state purposes or for the immediate benefit of the metropolitan district. As a part of the money received from the bond sales was not needed immediately, the state invested it in short-term securities, and thus secured a higher rate of interest than could be obtained on cash deposits. The loan funds derived from direct debt amounted in 1912 to \$1,703,419, a small portion of which is invested in state, county, and municipal securities. The contingent debt loan funds aggregates \$359,534, all of which is in cash.

Private trust funds.—These consist of various amounts deposited with the state treasurer to be held to the credit of the funds to which they belong. Some of the funds have been invested in state, county, and city securities. The two largest funds are the insolvent corporations fund, \$39,586, and the escheated estates fund, \$245,253; the total of all funds—cash and securities—is \$322,329.

General and special funds.—Under this heading are reported the cash balances of all funds dealing with ordinary running expenses, which funds amounted to \$2,767,965 in 1912.

Table 26 gives a summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912, and also the same data for 1880.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year the total

and per capita debt less sinking fund assets are included in the table. Additional figures show the direct state and per capita debt, with the deduction of the metropolitan district debt, which is a contingent debt contracted by 41 cities and towns adjacent to Boston for the construction of parks, and one-half of the expense of constructing the boulevards, for the improvement and extension of the sewerage and water systems, for the deepening of the Charles River basin, and two-thirds of the expenses of building the Suffolk County courthouse. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows a general increase in the bonded indebtedness from \$33,020,464 in 1880 to \$117,134,662 in 1912. No floating debt is re-

corded until 1901; the figures changed greatly from year to year, and in 1912 amounted to \$668,329, consisting of private trust funds and temporary loans.

In the funds and investments the securities show a general increase amounting to \$31,904,575, while the cash fluctuated greatly.

The sinking fund assets are comparatively large, increasing \$26,016,653 during the period; the debt less sinking fund assets is in consequence much less than the total debt. The per capita debt, which was \$11.66 in 1880, shows a remarkable increase from \$4.38 in 1890 to \$22.78 in 1912. The debt less sinking fund assets less the metropolitan districts, however, shows a decrease from \$5,942,198 in 1890 to \$5,208,011 in 1912. The per capita debt derived from these amounts decreased from \$2.65 to \$1.49 during the period.

MICHIGAN.

Funded debt.—On June 30, 1913, the funded debt of Michigan consisted only of special debt obligations to public trust funds, these funds being derived from the sale of all lands given by the United States to the state for educational purposes. The state has used these moneys for expenses of the government, and pays interest to the various funds for the use of same. On June 30, 1913, this debt amounted to \$6,896,212.

Floating debt.—On June 30, 1913, the floating debt is \$192,880, composed of private trust funds in the form of various deposits.

Educational funds.—The state constitution provides that the proceeds from the sale of all lands that have been or hereafter may be granted by the United States to the state for educational purposes, and the proceeds of all lands or other property given by individuals or appropriated by the state for like purposes, shall be and remain a perpetual fund, the interest and income of which, together with the rents of all such lands as may remain unsold, shall be inviolably appropriated and annually applied to the specific objects of the original grant, gift, or appropriation. The primary school, university, agricultural college, and normal school funds have been created under this act, and the figures given for these funds are those reported by the state treasurer for the fiscal year ending June 30, 1913.

Primary school fund.—The primary school fund consists of amounts derived from the sale of school lands, the proceeds from the sale of swamp lands, escheats to the state, and the proceeds from the lease of certain mineral lands. The state has used these moneys for defraying the expenses of government, and pays the public schools, through the primary school interest fund, 5 per cent annually on the amount received from swamp land sales and 7 per cent on the remainder. On June 30, 1913, the fund amounted to \$5,288,313.

University, agricultural college, and normal school funds.—These funds are composed of proceeds from

the sale of certain lands. The state has used the principal and pays 7 per cent interest thereon for the university and agricultural college funds and 6 per cent for the normal school fund. On June 30, 1913, the credit balances were \$546,219, \$990,314, and \$69,366, respectively.

University deposit fund.—Act 140, session laws 1895 (approved May 11, 1895), provides that whenever any money, or other property of whatever nature and kind with directions or with power to convert the same into money, is or shall be given to the regents of the university upon trust to expend the income thereof in furtherance of any of the objects of the university, the regents shall pay such money to the state treasurer, and the auditor-general shall be required to credit to the university interest fund interest, not to exceed the rate of 4 per cent per annum, upon all such moneys, said interest not to be paid from the specific tax fund.

Under authority of this act \$2,000 was received during the fiscal year 1900 as a legacy from Adah Z. Treadwell, the interest on the same to be expended annually for the support of a free bed in the university hospital. According to the provisions of the act, \$50 interest is credited annually to the university interest fund to carry out the terms of the trust.

Sundry deposit funds.—The assets of the funds included under this heading, amounting to \$192,880, consist of cash accredited to the following: Sundry deposit accounts, \$74,567; auditor-general deposit, \$53,796; land office deposit, \$17,025; secretary of state deposit, \$22,224; quartermaster-general (military) deposit, \$13,676; quartermaster-general (navy) deposit, \$4,533; quartermaster-general (armory) deposit, \$6,976; and state board of health deposit, \$83.

General and special funds.—Under this title are consolidated all cash balances of the general and special administrative funds. On June 30, 1913, these funds amounted to \$9,174,842.

Table 27 gives a summary of the debt, funds and

investments, and sinking fund assets, from 1891 to 1913, and also the same data for 1880.

The total debt, also funds and investments are shown, and for each year indicated the total and per

capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

¹ Not reported.

An inspection of the table shows a fluctuating bonded indebtedness, which varied from \$905,150 in 1880 to \$16,100 in 1904, after which year it disappeared entirely. The special debt to public trust funds increased steadily during the whole period. The floating debt, first recorded in 1903, fluctuated greatly, reaching the maximum amount of \$452,991 in 1908.

In the funds and investments the securities show

relatively small change. The cash, subject to natural change from year to year, shows a general increase during the period.

No sinking fund assets, as such, are recorded after 1905. The amounts shown for the prior years were small with the exception of that for 1880 and do not materially affect the total debt. The per capita debt remains approximately the same.

MINNESOTA.

Funded debt.—On July 31, 1912, the funded debt of Minnesota consisted of \$900,000 in certificates of indebtedness held largely by the school fund.

Floating debt.—The floating debt consists of outstanding warrants amounting to \$445,290.

Internal improvement land fund.—This fund was created, as the name implies, for internal improvements, roads, bridges, etc., and is invested in prison building certificates of indebtedness, and real estate mortgages.

Permanent school fund.—The principal of the school fund is derived from the sale of the sixteenth and thirty-sixth sections of land in each township, a total of 3,000,000 acres. In addition, one-half the proceeds of the sale of swamp lands remaining to the state after the various grants to railroad companies and state institutions have been made shall revert to this fund. The funds are invested in Minnesota certifi-

cates of indebtedness, other state bonds, real estate mortgages, and city, county, township, and school district bonds. The income from these investments is apportioned for the support of the common schools of the state.

Permanent university fund.—This fund is derived from the sale of 186,569 acres of land, donated by Congress. It is invested in real estate mortgages, other state bonds, and city, county, township, and school district bonds.

Swamp lands fund.—This fund was derived from the sale of swamp lands—more than 1,500,000 acres—set apart by Congress to be divided between the school fund and the educational and charitable institutions of the state. Its investments are real estate mortgages, other state bonds, and city, county, township, and school district bonds. The state institution land fund was merged into this fund in 1907.

General and special funds.—The cash balances of the administrative funds, and all others having no investments, are reported under this heading.

Table 28 gives a biennial summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912, and also the same data for 1880.

¹ Not reported.

² Not recognized as valid in 1880 ("accumulated interest on railroad bonds of 1858.")

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year indicated the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows a general reduction in the bonded indebtedness from \$4,480,000 in 1890 to \$900,000 in 1912. The floating debt, which amounted to \$3,575,000 in 1880, shows a decided decrease to \$71,896 in 1890, fluctuating considerably

until it reached the maximum in 1912. In the funds and investments the securities show a general increase from \$5,616,375 in 1880 to \$27,272,671 in 1912. The cash fluctuates throughout the period, reaching the maximum amount of \$4,261,232 in 1910.

The sinking fund assets show variations until 1910, when the entire fund was used to pay off the bonded indebtedness. The debt less sinking fund assets does not differ materially from the total debt. A steady decrease is noticeable in the per capita debt, due partly to the decreased funded indebtedness and partly to the increase in population.

MISSISSIPPI.

Funded debt.—The funded debt of Mississippi on September 30, 1912, consisted of several series of bonds and of special debt obligations to public trust funds. The sum of \$2,899 remains of an old bond issue past due. The other issues, amounting to \$1,504,000, were for revenue deficit and refunding purposes and for the purpose of defraying the expenses of state government. The special debt obligations to public trust funds represent obligations to several educational funds, the principal (\$2,344,674) of which has been used by the state, for which it pays an annual interest of 6 per cent in perpetuity.

Floating debt.—The floating debt consists of outstanding warrants and a temporary loan of \$600,000.

Common school fund.—The common schools are supported entirely by state appropriations, a poll tax

being levied for that purpose, there being no invested funds for their maintenance.

Public trust funds.—On September 30, 1912, there were in the possession or control of the state six trust funds held for various institutions of learning. The Chickasaw school fund, derived from the sale of lands of the Chickasaw concession, amounts to \$1,034,403. The university fund, of \$701,047, was received from the sale of university lands donated to the state by Congress. The seminary fund, provided in the same manner, has been transferred to this fund. The industrial institute and college fund, the proceeds from the sale of lands donated by Congress, amounts to \$159,565. The agricultural and mechanical college fund, of \$141,213, received as proceeds of the sales of land donated by Congress. The Alcorn Agricultural and Mechanical College fund, amounting in

1912 to \$96,296, represents the proceeds of sales of land donated by Congress. The agricultural college fund, growing out of the sale of land scrip allotted to the state by the United States, amounted in 1912 to \$212,150.

General and special funds.—Under this heading are grouped the cash balances of all funds having no investments.

Table 29 shows a summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912,

no reports being received for 1892, 1893, 1896, 1897, and 1906. The same data are also shown for 1880.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year indicated the total and per capita debt less sinking fund assets are included in the table.

In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

¹ Not reported.

An inspection of the table shows a fluctuating bonded indebtedness, reaching more than \$1,000,000 during the first decade, and varying from \$530,615 in 1880 to \$1,506,899 in 1912. There is little change in the special debt obligations to public trust funds, while the floating debt shows a marked variation.

In the funds and investments the securities re-

main approximately the same throughout the period covered, while the cash shows decided changes.

No sinking fund assets, as such, are recorded in any year, therefore the debt less sinking funds is the same as the total debt. The per capita debt shows no material changes, being only slightly affected by the fluctuating indebtedness.

MISSOURI.

Funded debt.—The funded debt of Missouri on December 31, 1912, consisted of capitol building bonds and school and seminary certificates of indebtedness, amounting to \$4,683,839. Capitol building bonds of \$285,000, bearing interest of 3.5 per cent, were issued for the purpose of building a new state capitol. The certificates of indebtedness for the state school fund amount to \$3,159,000, and consists of one 6 per cent certificate of indebtedness for \$2,909,000, and six 5 per cent certificates of indebtedness amounting to \$250,000. The certificates of indebtedness issued for the purpose of the seminary fund, consist of one 6 per cent certificate of indebtedness for \$122,000, and thirteen 5 per cent certificates of indebtedness of \$1,117,839. Under the provisions of the state laws, whenever one of

these certificates of indebtedness matures it shall be canceled by the board of education and a new certificate for a like amount in renewal thereof shall be executed by the governor for a period of 20 years, bearing the same rate of interest.

Floating debt.—The floating debt is made up of private trust obligations in the form of unclaimed estates, money paid into the treasury by executors and administrators, assignees for the benefit of creditors, and various other sums that have escheated to the state; this fund in 1912 amounted to \$91,688.

Sinking fund.—This fund was created as a sinking fund for the purpose of crediting a tax of two cents on the one-hundred dollar valuation of all taxable property in the state, said receipts to be used in the pay-

ment of capitol bonds and the interest accruing thereon until same is paid and canceled. The assets of this fund in 1912 consist of a cash balance of \$104,309.

School fund.—Congress granted to Missouri for school purposes all salt springs not exceeding 12 in number, with six sections of land adjoining each, which grant formed the nucleus for this fund. The proceeds thus arising were invested. It was further provided that the interest and profits accruing from the "surplus revenue" of the United States deposited with this state should be held for the use and support of schools. Interest and dividends upon these amounts were to be applied to increasing the capital. This fund was increased later by the proceeds from the sales of lands, dividends on investments, and premiums on securities sold, as well as from various other sources. In 1881 the general assembly authorized the fund commissioners to issue a consolidated certificate of indebtedness, and on December 31, 1912, these certificates of indebtedness amounted to \$3,159,000, as stated elsewhere. This does not include, however, a cash balance of \$281.

Seminary fund.—Congress provided that 46,080 acres of public lands should be reserved solely for the use of a seminary. Later, Congress authorized the legislature to sell these lands and invest the money, the proceeds to be applied forever to the use of a seminary. From various sources the fund was augmented until 1881, when the board of fund commissioners issued in lieu of the renewal funding bonds a consolidated certificate of indebtedness of the state for \$122,000, payable 30 years after date, with interest at the rate of 6 per cent. In 1883 the fund commission-

ers were further authorized to borrow any moneys paid into the state for the seminary fund and to issue certificates of indebtedness, similar to those issued to the common school fund. This total in 1912 amounted to \$1,239,839, which does not include other securities and a cash balance of \$3,720 held by the fund.

Escheats fund.—This fund, amounting to \$91,688 on December 31, 1912, is made up of moneys paid into the treasury by executors and administrators; by sheriffs from the sale of land in partition, and proceeds of sales of real estate escheated to the state; unclaimed allowances against estates; unclaimed dividends in insolvent insurance companies and various other sources. These moneys are paid out on certified orders of the courts to those entitled thereto, provided they are claimed within 21 years from date of deposit in the treasury; after this period all moneys escheat to the state and are then transferred to the public school fund.

General and special funds.—Under this heading are included all special and administrative funds having as assets a cash balance. On December 31, 1912, this amount was \$2,781,832.

Table 30 gives a summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912, and also the same data for 1880.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year indicated the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

¹ Not reported.

An inspection of the table shows a decreasing bonded indebtedness from 1880 to 1902, after which it disappeared entirely until 1912, when there was an issue of \$285,000. The special debt to public trust funds remains practically unchanged.

In the funds and investments the securities are approximately the same throughout the period, while the cash shows a general increase.

The sinking funds varied greatly, disappearing from 1907 until 1912, which year shows a fund amounting to \$104,309. This fund was at no time sufficiently large to make a material difference between the debt less sinking fund assets and the total debt. The per capita debt declined steadily from \$9.00 in 1880 to \$1.40 in 1912, due to the increase in population and the decrease in the funded debt.

MONTANA.

Funded debt.—On November 30, 1912, the funded debt of Montana was \$1,200,000, and consisted of bonds of which there were four series outstanding. Three of these issues were for the erection of the state capitol. One is an old issue—that of \$350,000—the remaining two, however, being of more recent date, namely, \$500,000 issued in 1909 and \$150,000 issued in 1911. Capitol building bonds are not a direct obligation of the state of Montana, but are secured by 182,000 acres of land on which the timber is valued at more than \$3,000,000. The fourth issue outstanding is that of state bonds to the amount of \$200,000, issued in 1909, bearing interest at the rate of 4 per cent and redeemable at the option of the state; \$75,000 of these will be redeemed on January 1, 1913. These bonds were “issued by the state board of land commissioners, for the use and benefit of various state educational institutions, and also to make whole the permanent funds of the various state educational institutions.”

Floating debt.—The floating debt of the state is made up of outstanding warrants, amounting to \$547,910.

Sinking fund.—The sinking fund of Montana for 1912 amounts to \$235,036, and holds as assets school district bonds (\$103,000), capitol building bonds (\$105,000), and cash (\$27,036). This fund is known as the “capitol building and interest sinking fund,” and provides for the paying off of principal and interest on bonds issued for the purposes of erecting additions to the state capitol.

School fund.—The school fund consists of the proceeds of such lands as have been or may be granted by the General Government, known as school lands; all other lands or property belonging to any fund for purposes of education; estates that have escheated to the state; and all other grants, gifts, devises, or bequests made to the state for general educational purposes. The fund in 1912 amounted to \$3,072,564, and is invested in state and county securities and state warrants, and includes \$613,875 cash. The income only is used, being turned into the school income fund.

University fund.—The permanent fund of the university is derived from the sales of land granted to the state for university purposes. The fund in 1912 is invested in state and county securities and amounted to \$246,951, including \$7,271 cash. The income from this fund goes to the support of the university.

Agricultural college fund.—This fund is derived from the proceeds of the sale of lands granted by the United States to Montana for the purpose of establishing and maintaining a college of agriculture. The fund is to be invested and the income used for its support. This fund will undoubtedly increase at a rapid rate, as the lands held to its credit are very valuable. The total on November 30, 1912, is \$349,725, invested in state and county securities, with a cash balance of \$17,355.

Deaf and blind school fund.—For the establishment and maintenance of this school 50,000 acres of land were granted to the state by the United States, and the proceeds of the sales of this land constitute this fund, the interest of which only shall be expended for its support. The fund in 1912 amounted to \$125,395, consisting of cash, \$326, and the remainder invested in state and county securities.

Normal school fund.—The permanent normal school fund is derived from the proceeds of the sale of lands granted the state by the United States, 100,000 acres having been granted for this purpose. The interest alone from the sale of this land goes to the support of said school. In 1912 the fund is \$345,524, with a cash balance of \$9,409.

Reform school and school of mines funds.—The funds of both of these schools consist of the proceeds of the sale of lands granted for this purpose—the former being granted 50,000 acres and the latter 100,000 acres. Like the other school funds, the interest only is to be used in their support. The total amount of the reform school fund on November 30, 1912, is \$73,587, and that for the school of mines \$267,568.

General and special funds.—The cash balance of the general fund is included with various other funds under this heading, and in 1912 amounted to \$714,038.

Table 31 gives a summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912, and also the same data for 1880.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year indicated the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows that with the exception of 1880 the state was without bonded indebtedness until 1895, when an issue of \$45,000 is

recorded; additional amounts were issued until in 1912 the bonds amounted to \$1,200,000. The floating debt increased from \$175,190 in 1890 to \$547,910 in 1912.

In the funds and investments the securities increased from \$21,500 to \$4,028,747 during the period from 1892 to 1912.

¹ Not reported.

No sinking fund assets, as such, are recorded until 1895, when \$2,499 was held; this amount increased to \$235,036 in 1912, and the debt less sinking fund assets is correspondingly less than the total debt. The population of the state increased gradually and served to lower the per capita debt, but the rate of

increase is not sufficient to offset the very marked increase in the total debt; hence the per capita debt advanced from \$1.79 in 1880 to \$3.73 in 1912. The maximum per capita debt was reached in 1903, when it amounted to \$4.92, while the minimum amount recorded was \$0.78 in 1892.

NEBRASKA.

Floating debt.—On November 30, 1912, a floating debt of \$374,394, outstanding warrants, constituted the only debt of Nebraska.

School fund.—The state constitution directs that the revenue from the following sources be set aside for a perpetual common school fund, the income only being available: First, the percentage granted by Congress on the sale of public lands in the state; second, the proceeds from the sale or lease of sections 16 and 36 in each township; third, the proceeds of all lands granted to the state not otherwise appropriated; fourth, such sums as shall accrue from escheated estates; fifth, all other property, stocks, bonds, etc., belonging to the fund. This fund, amounting in 1912 to \$8,482,143, is invested, exclusive of the cash balance, by the board of education in other state bonds, Nebraska warrants, and in county, municipal, school district, and drainage bonds. The state is responsible for any loss in the principal.

University fund.—This fund was derived from the sale of 45,426 acres of land granted by Congress. In 1912 it amounted to \$218,377, invested in Nebraska

warrants, other state bonds, and in county, municipal, and school district bonds.

Agricultural college fund.—The principal of this fund was derived from the sale of 90,150 acres of land donated by Congress. This fund, amounting in 1912 to \$545,064, is invested in other state bonds, Nebraska warrants, and in county, municipal, and school bonds.

Normal endowment fund.—The principal of this fund was derived from the sale of 12,804 acres of land, appropriated by the state legislature. On November 30, 1912, the fund amounted to \$80,819, and is invested in Nebraska warrants, county and municipal bonds.

General and special funds.—Under this heading are grouped the cash balances of the administrative and several other funds having no investments.

Table 32 gives a biennial summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912, and also the same data for 1880.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year indicated

the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows a small bonded indebtedness, which disappeared in 1900. The floating debt shows marked changes, reaching the maximum amount, \$2,342,980, in 1904.

¹ Not reported.

In the funds and investments the securities increased steadily from \$613,847 in 1880 to \$9,307,988 in 1912. The cash shows a general decrease during the period covered.

The sinking fund assets, as such, disappeared in 1902. The debt less sinking fund assets is approxi-

mately the same as the total debt. The sinking fund assets recorded from 1880 to 1900 were too small to have an appreciable effect upon the total debt. The per capita debt reached the maximum of \$2.18 in 1896; in 1910 it was \$0.20, the extremes being due to the fluctuation in the total debt.

NEVADA.

Funded debt.—The funded debt of Nevada amounted to \$614,000 on December 31, 1912. It consists of \$234,000 in bonds, the several issues being held by various educational institutions, and of \$380,000 in nonnegotiable certificates of indebtedness, tabulated as a special debt obligation to public trust funds.

Floating debt.—The floating debt of Nevada in 1912 consists of outstanding warrants to the amount of \$56,759.

Sinking fund.—The sinking fund is derived from direct taxation, the constitution providing that every law authorizing a loan shall provide for the levying of an annual tax sufficient to pay the debt in full within 20 years. On December 31, 1912, the cash in the sinking fund amounted to \$63,064.

School fund.—At the close of the fiscal year 1912 the permanent school fund amounted to \$2,184,702, and is invested, exclusive of the cash, in Nevada bonds, special certificates of indebtedness, United States bonds, and other state bonds. The income alone is available for expenditure.

University fund.—This fund consists of \$29,000 state of Nevada bonds, \$102,000 Massachusetts bonds, and \$26,334 in cash; the income only is used for the benefit of the state university.

General and special funds.—The cash in the general fund and in the various other funds of the state, having no investments, are tabulated as "General and special funds."

Table 33 gives a summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912, and also the same data for 1880.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year indicated the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows that the bonded indebtedness did not change very greatly, there being an increase of only \$54,000 in a comparison of

figures for 1912 and 1890. The special debt to public trust funds remained the same throughout the entire period.

The floating debt fluctuated from year to year, but was never large enough to make any appreciable difference in the total debt.

In the funds and investments both cash and securities show a slight general increase.

The sinking fund assets, while showing a general increase, are at no time large; hence the debt less

sinking fund assets is only a trifle less than the total funded debt. The per capita debt is high, ranging from \$15.32 in 1898 to \$5.21 in 1911, the decrease being due largely to the increase in population.

NEW HAMPSHIRE.

Funded debt.—On August 31, 1912, the funded debt of New Hampshire consisted of negotiable bonds and nonnegotiable obligations to public trust funds, aggregating \$1,376,100 and \$694,639, respectively. One of the several issues of negotiable bonds is past due, and the interest upon these bonds has ceased. The remaining series were issued for various general purposes—such as the erection of buildings for the state library, agricultural college, state hospital, state sanatorium, and for the construction of state highways. The nonnegotiable obligations represent the principals of various funds which have been absorbed by the state, but upon which the state pays interest. The funds so converted to state purposes are the teachers' institute, agricultural college, Fiske legacy, Kimball legacy, Benjamin Thompson trust, and Hamilton Smith trust funds.

Floating debt.—The floating debt of the state is made up of private trust liabilities on account of moneys held temporarily by the state for Spanish War veterans, railroad corporations, insurance companies, and savings banks.

Teachers' institute fund.—This fund was derived from the sale of state lands and was originally known as the "school fund." The expenses of county teach-

ers' institutes are charged annually to this fund, and any unexpended balance is carried forward to the next year. On August 31, 1912, its only asset consisted of an obligation on the part of the state amounting to \$59,598 for a sum of like amount used by the state for other purposes.

Agricultural college fund.—This fund was derived from the sale of United States land scrip and amounted to \$80,000 in 1912. The state is under obligation to the fund for this whole amount and pays 6 per cent interest upon it to the New Hampshire College of Agriculture and the Mechanic Arts.

Benjamin Thompson trust fund.—This fund was created when the state accepted the provisions of the last will and testament of Benjamin Thompson, who died leaving a large share of his property to the state of New Hampshire in trust for the establishment and maintenance of an agricultural school. A special debt obligation on the part of the state for \$511,910 constitutes the greater part of this perpetual fund of \$797,182, and the Benjamin Thompson estate together with investments make up the remainder.

Hamilton Smith trust fund.—This fund consists of the sum of \$10,000, donated by Hamilton Smith for the benefit of the New Hampshire College of Agricul-

ture and the Mechanic Arts. The state holds the principal in trust and pays interest thereon to the college at the rate of 4 per cent annually.

Fiske and Kimball funds.—These are funds created by bequests for the benefit of the state insane asylum, and in 1912 they amounted to \$26,378 and \$6,753, respectively. The state pays upon these amounts 6 per cent annual interest for the benefit of the asylum.

Private trust funds.—These consist of amounts of money temporarily held in trust by the state treasurer,

as follows: Spanish War gratuity, deposits by railroad corporations for land damages, deposits by People's Fire Insurance Company, and unclaimed savings bank deposits.

General and special funds.—Under this heading are included the cash balances of all administrative funds of the state.

Table 34 shows a summary of the debt, funds and investments, and sinking fund assets, from 1891 to 1912, and also the same data for 1880.

¹ Not reported.

In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows a marked decrease in the bonded indebtedness from 1880 to 1905, after which there is a general increase to \$1,376,100 in 1912. The floating debt, showing a tendency to increase, reaches the maximum of \$139,689 in 1907.

In the funds and investments both cash and securities show a general increase during the period covered.

No sinking fund assets, as such, are recorded until 1910, the fund amounting to \$165,000 in 1912. The debt less sinking fund assets is therefore practically unchanged. The per capita debt shows fluctuation from \$10.46 in 1880 to \$4.50 in 1912, being attributable to similar changes in the funded debt.

NEW JERSEY.

Funded debt.—On October 31, 1912, \$116,000 of nonnegotiable certificates of indebtedness issued to the agricultural college, and tabulated as a special debt obligation to public trust funds, constituted the only funded debt of the state.

Floating debt.—Private trust funds to the amount of \$526,069, deposited by various railroad and traction corporations, constituted the floating debt of the state in 1912.

School fund.—In 1912 the school fund amounted to \$5,592,203, and is invested in municipal bonds, railroad and bank stock, and in real estate and real estate mortgages. The fund is augmented by the proceeds

from the sale or lease of all lands of the state now or formerly lying under water; a special body, the riparian commission, has charge of these transactions.

Agricultural college fund.—This perpetual fund originated from the sale of land scrip, donated by Congress, to the amount of \$116,000, and is secured by nonnegotiable certificates of indebtedness, bearing 5 per cent interest.

Private trust funds.—In 1912 special deposits to the amount of \$526,069, by railroad, street railway, and traction corporations, were tabulated as private trust funds.

General and special funds.—Under this heading are tabulated the administrative funds, which on October 31, 1912, consisted of \$7,534,196 cash and \$188,700 railroad and canal stock.

Table 35 gives a summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912, and also the same data for 1880.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year indicated the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

¹ Sinking fund exceeds debt

An inspection of the table shows a decreasing bonded indebtedness until 1902, when it disappeared altogether. No special debt obligations to public trust funds are recorded until 1895; the fund increasing from \$31,600 in this year to \$116,000 in 1902, and remaining unchanged from 1902 to 1912.

No floating debt is recorded between 1891 and 1902, the amount varying slightly from this latter year to 1912.

In the funds and investments both cash and securities increased steadily throughout the period.

The sinking fund assets decreased until 1903, when the fund disappeared. Between 1897 and 1902 the total funded debt was less than the sinking fund assets. The per capita debt shows a general decrease from \$0.66 in 1890 to \$0.24 in 1912, due to the increase in population and the decrease in the bonded indebtedness.

NEW MEXICO.

Funded debt.—On November 30, 1912, the funded debt of New Mexico consisted of a number of series of bonds, aggregating \$1,148,000. One of the largest issues represents the territorial institutions bonds of 1907, and four issues of refunding bonds make up more than one-third of the total debt. The remainder of the debt was incurred for general purposes, and the issues are all small, with the exception of one issue of certificates of indebtedness, amounting to \$200,000. According to an article of the constitution of New Mexico, the state was to assume the debts and liabilities of the territory of New Mexico and the debts of the counties thereof which were valid and subsisting on June 20, 1910, and was to pledge its faith and credit for the payment thereof. The territorial obligations have been refunded, but state bonds, though

authorized, have never been issued to take over the county liabilities, which aggregated \$3,133,855 on November 30, 1912.

Floating debt.—Warrants outstanding to the amount of \$88,632 constitute the floating debt of New Mexico.

Sinking funds.—There are two sinking funds in New Mexico—the insane asylum bonds and the capitol rebuilding bonds. Their only assets, \$11,362 and \$7,061, respectively, are derived from the sale of lands and from taxation.

General and special funds.—The cash belonging to all administrative and educational funds is given under this heading.

Table 36 gives a biennial summary of the debt and debt less sinking fund assets, and an annual summary of the funds and investments from 1890 to 1912.

In each year the total debt and the general classes thereof are shown.

Corresponding data are shown for funds and investments, and for each year indicated the total and per

capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

1880 ¹

¹ Not reported.

An inspection of the table shows a general increase in the bonded indebtedness from \$720,000 in 1890 to \$1,148,000 in 1912. A small floating debt is recorded for eight years of the period.

The state by an act of the legislature assumed the debts and liabilities of the territory of New Mexico and the debts of the counties thereof, which were valid and subsisting on June 20, 1910, and pledges its faith and credit for the payment thereof. The legislature provided for the payment or refunding thereof by the issue and sale of bonds or otherwise. These bonds,

amounting to \$3,133,855, have been authorized but not issued.

In the funds and investments, securities were recorded for only three years, 1899, 1900, and 1901. The cash shows a general increase throughout the period.

The sinking fund assets show marked changes, though at no time being sufficient to make any appreciable reduction in the total funded debt. The per capita debt decreased from \$5.42 in 1890 to \$3.41 in 1912, due to the increase in population.

NEW YORK.

Funded debt.—On September 30, 1912, the funded debt of New York consisted of negotiable bonds aggregating \$109,702,660 and a nonnegotiable state obligation in the form of a special debt obligation to the college land scrip fund, amounting to \$688,576. Of the negotiable bonds, \$660 are old bonds past due and the interest upon them has ceased. The majority of the remaining bonds were issued for canals and for the improvement of state highways.

Floating debt.—At the close of the fiscal year 1912 the floating debt consisted of private trust funds to the amount of \$1,066,096.

Sinking fund.—In 1912 the sinking fund amounted to \$25,252,085, about 23.02 per cent of the state debt. This sum includes \$21,188,716 securities and \$4,063,369 cash.

Common school fund.—The principal of the school fund, amounting in 1912 to \$4,848,141, was derived from several sources, as follows: In 1789 the legislature directed the survey of 20 townships, and the reservation near the center of each town of a lot for the support of schools; from 1795 to 1800, \$100,000 was appropriated annually; in 1801 the proceeds of four lotteries contributed \$87,500 to the fund, and by an early constitutional provision all lands not otherwise appropriated were pledged to the support of the common schools. From 1892 to 1912 the principal was increased annually by \$25,000 from the United States deposit fund. These various amounts are invested, exclusive of the cash balance, in county, municipal, and school district bonds, Manhattan Company stock, and real estate mortgages.

Literature fund.—This fund was established from the proceeds derived from the sale of lands set apart by the state legislature in 1786 for the promotion of literature. The lotteries of 1801 contributed \$12,500 to the fund, and a transfer from the general fund in 1827 added \$150,000 more. In 1912 the fund amounted to \$284,201 and is invested in municipal bonds and insurance company stock. It is managed by the state comptroller and the income apportioned among the several academies of the state.

College land scrip fund.—This fund was established for the promotion of agricultural and mechanical education, and was derived from the sale of land scrip granted by Congress. The principal of the fund was originally invested in stocks and bonds, but in 1895 these securities were sold and the proceeds transferred to the general fund with the provision that the state should pay Cornell University 5 per cent interest on the amount. This amount of \$688,576 is tabulated as a "Special debt to public trust funds" for 1912.

United States deposit fund.—The principal of this fund was New York's portion of the United States surplus revenue apportioned to the several states by Congress in 1836. From the income of this fund \$25,000 is annually transferred to the principal of the common school fund, and the remainder expended for common schools and academies.

Military record fund.—An act of the legislature in 1865 authorized the construction of a hall of military records, provided \$75,000 should be contributed by the people of the state. The principal of the military

record fund consists of surplus contributions remaining in the hands of the state treasurer after the hall of records had been constructed. In 1912 this fund amounted to \$39,121, and is invested in municipal bonds with a small cash balance remaining. The income defrays the expenses of the bureau of military statistics.

William Vorce fund.—This fund consists of a bequest for the benefit of education in certain towns of the state. The state comptroller has charge of the fund, amounting in 1912 to \$134,247, which is invested in municipal bonds, the income being paid to the state commissioner of education for distribution among the towns stipulated in the bequest.

Canaseraga Creek improvement fund.—The Canaseraga Creek improvement fund had a cash balance of \$145,267 in 1912. The fund is managed by the state comptroller apart from the treasury funds.

Retirement fund for state hospital employees.—A permanent fund for the payment of annuities to the employees of the New York State Hospital for the Insane was created by an act of the legislature in 1912. At the close of the fiscal year the fund had a cash balance of \$25,910, and is managed by the state comptroller apart from the treasury funds.

General and special funds.—Under this heading are grouped the cash balances in the general and special administrative funds of the state.

Table 37 gives a summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912, and also the same data for 1880.

¹ This does not include a "special debt obligation to Indian tribes," of \$122,695, reported as a debt prior to 1902.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year indicated the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows that the bonds amounting to \$4,841,610 in 1890 were reduced to \$660 in 1893. In 1897 there was a new issue of \$5,765,000, and in 1912 the bonded indebtedness amounted to \$109,702,660. The special debt obligations to public trust funds were increased to \$811,271 in 1895, decreasing to \$688,576 in 1902 and remaining unchanged throughout the period. A floating debt is

reported from 1902 to 1912 which showed a general tendency to increase.

In the funds and investments both cash and securities show a marked increase.

The sinking fund assets fluctuated greatly until 1897, after which there was a steady increase until 1912 when the fund amounted to \$25,252,085. The debt less sinking fund assets is markedly less than the total funded debt during the last decennial period, following the increase of the sinking fund assets. Although the increase of population during the period covered was more than three and one-half million, it was not sufficient to offset the great increase in the bond issue, and the per capita debt increased from \$0.30 in 1890 to \$9.05 in 1912.

NORTH CAROLINA.

Funded debt.—On November 30, 1912, the funded debt of North Carolina was made up of bonds, amounting in all to \$7,532,950. Two small issues are overdue but have never been presented for payment, and the interest upon these bonds has ceased. Two series, amounting to \$2,720,000 and \$3,430,000, were issued to refund bonds of an earlier date, and the remaining issues are small and were for general purposes.

Floating debt.—The floating debt reported outstanding warrants amounting to \$225,480 and a temporary loan of \$300,000.

School fund.—This fund is held in trust for the benefit of public education. In 1912 its only asset con-

sisted of loans to counties for the purpose of building schoolhouses; the principal of the fund amounting to \$421,459.

General and special funds.—Under this heading are included the cash balances of all administrative funds. The state holds as an investment stock to the amount of \$4,266,800 in the North Carolina Railroad and in the Atlantic & North Carolina Railroad.

Table 38 gives a summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912, and also the same data for 1880. During the first and last half of the two decades only semiannual reports were obtainable.

¹ Not reported.

In each year the total debt and the general classes thereof are shown.

Corresponding data are shown for funds and investments, and for each year indicated the total and per

capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows that the bonded indebtedness remained practically unchanged after 1880; the floating debt shows a general increase from \$6,193 in 1890 to \$525,480 in 1912.

In the funds and investments the securities remain

approximately the same, while the cash shows natural fluctuations. There being no sinking fund reported, the debt less sinking fund assets remains the same as the total debt. The per capita debt varied little after 1880, being \$4.76 in 1890 and \$3.54 in 1912.

NORTH DAKOTA.

Funded debt.—On October 31, 1912, the funded debt of North Dakota consisted of several series of negotiable bonds, aggregating \$937,300. One issue of \$106,000 represented territorial funding bonds, assumed as North Dakota's portion of the territorial debt of Dakota under the provisions of the joint commission's report, which was adopted by the people of North and South Dakota. A majority of the issues

were for refunding purposes, the original bonds having been issued to cover the university deficiency, to pay off capitol building warrants, and for the construction of the university and other public buildings. The remaining bonds were issued for the capitol building, for the benefit of the university, and other institutions supported by the state.

Floating debt.—No floating debt is reported.

¹ Not reported.

Sinking funds.—Two funds, known as the asylum bond and the state bond sinking funds, were established for the redemption of state debt and amounted in 1912 to \$537 and \$116,339, respectively.

School fund.—The sixteenth and thirty-sixth sections of land in each township, or other lands in lieu thereof, were granted by Congress to form a permanent school fund. The act stipulated that all such lands granted for educational purposes should not be sold for less than \$10 per acre; also that 5 per cent of the net proceeds from the sale of all Government lands sold subsequent to the admission of the state should be paid to said state and credited to the permanent school fund. On October 31, 1912, this fund held a cash balance of \$110,210, and bonds and real estate

mortgages aggregating \$7,958,772, an amount which includes also bonds belonging to each of the state funds reporting investments.

State university fund.—Under the enabling act admitting the state, 86,080 acres of land were to be selected by the state for the state university. The bonds held by this fund are reported with those of the school fund.

School of mines fund.—This fund was derived from the sales of land granted to the state under the enabling act for a school of mines. Its investments are included with those of the school fund.

Agricultural college fund.—As provided in the acts of Congress making grants for agricultural colleges, 130,000 acres of land were to be selected and sold by North

Dakota for the exclusive purpose of forming a permanent endowment fund for an agricultural college. The principal of this fund is invested in bonds, which are reported with those held by the school fund.

Normal school funds.—The principals of the funds for the two state normal schools have been derived from the sale of land set aside for that purpose by grants of the United States Government. The bonds constituting them are included with those reported by the school fund.

Other public trust funds.—The following funds were created from the sale of lands that have been donated by the United States for the purposes indicated by the names of the funds: School for deaf and dumb, hospital for insane, soldiers' home, blind asylum, industrial school, academy of science, and reform school funds. The investments of all these funds are included with those of the school fund.

General and special funds.—The state has a number of administrative funds with cash assets, all of which are reported under this heading.

Table 39 gives a summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912.

From 1890 to 1904 only biennial reports were obtainable.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year indicated the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows a slight general increase in the bonded indebtedness; while the floating debt, at no time large, disappeared altogether in 1904.

In the funds and investments the securities show a marked increase during the period covered. The cash varied from year to year, showing a general increase from 1890 to 1912.

No sinking fund assets, as such, are recorded until 1902; and though the fund increased steadily it shows only \$116,876 in 1912; for this reason the debt less sinking fund assets does not differ materially from the total funded debt. The per capita debt decreased from \$3.73 in 1890 to \$1.29 in 1912, due largely to the increase in population.

OHIO.

Funded debt.—On November 15, 1912, the funded debt of Ohio amounted to \$5,256,636, and was composed principally of nonnegotiable obligations to public trust funds. The only bonded debt of the state is the sum of \$1,665, the remainder of an old issue of harbor improvement bonds on which the interest has ceased. The nonnegotiable obligations are to the various educational institutions of the state and have been in force for many years, the state having absorbed the principal, on which it pays 6 per cent interest.

Floating debt.—At the close of the fiscal year 1912 outstanding warrants to the amount of \$17,981 and private trust funds to the amount of \$25,813 compose the floating debt of the state.

Sinking fund.—This fund, amounting in 1912 to \$158,388, is derived from the following sources: The net proceeds of both income and sale of public works and stock owned by the state; the proceeds of the sale of canal, ministerial, and school lands, not otherwise appropriated; the principal and the income of all surplus revenue; and also such further sum, raised by taxation, as is required by the constitution to reduce the debt.

Common school fund.—The principal of the common school fund was originally derived from the sale of lands granted by Congress for the support of public schools. Other sums have been contributed, and the total amount of \$3,524,528 constitutes an irreducible state debt, which draws 6 per cent interest.

Other public trust funds.—The swamp land indemnity fund, the Virginia military school fund, the United States military school fund, the Western Reserve

school fund, the Ohio University fund, and the Ohio State University fund were derived from grants of land for the benefit of the common schools. The principal has been absorbed by the state and constitutes a nonnegotiable debt obligation drawing 6 per cent interest.

Ohio ministerial relief fund.—This fund was established by the disposal of lands donated by Congress for religious purposes. The principal of the fund having been absorbed for state purposes, it constitutes an irreducible debt on which the state pays 6 per cent interest. The proceeds of the fund are used for religious purposes in the towns located in the region of the original grants.

Private trust funds.—Cash to the amount of \$813 held in trust, by order of the court, for the benefit of unpaid creditors of insolvent companies, and \$25,000 of road improvement bonds, held as security for a claim of the state against the Cincinnati Trust Co., constitute the private trust funds of the state.

General and special funds.—The cash balances of all other funds not mentioned above are tabulated under this title.

Table 40 gives a summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912, and also the same data for 1880.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year indicated the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows a marked decrease in the bonded indebtedness, amounting to \$6,475,140 from 1880 to 1912. The special debt to public trust

funds increased steadily during the period covered. The floating debt fluctuated with each year, though the general tendency was to decrease.

In the funds and investments both cash and securities show a general increase, the two items amounting to \$10,062,111 in 1912.

The sinking fund assets show the most marked change in 1891, when the fund increased from \$198,258 to \$1,065,706, but later decreased from year to year

until 1912, when it amounted to \$158,388. The debt less sinking fund assets is slightly less than the total funded debt, and shows a general decrease during the period. The per capita debt decreased from \$3.13 in 1880 to \$1.05 in 1912, due to the decrease in the bonded indebtedness and the increase in population.

OKLAHOMA.

Funded debt.—On November 30, 1912, the funded debt of Oklahoma was made up of three series of bonds, aggregating \$3,055,000. The largest series consists of funding bonds to the amount of \$1,460,000, and the other two series were for public buildings. In 1912 the state and school lands fund had \$290,000 invested in these bonds.

Floating debt.—Outstanding warrants, amounting to \$3,875,243, constitute the only floating debt.

State and school lands fund.—This fund is composed of the proceeds of the sale of lands granted by the United States for the use of the common schools; proceeds of the sales of public lands; the sum of \$5,000,000 appropriated to the state for the use of schools, in lieu of Indian lands; all property escheating to the state; and all appropriations, gifts, or donations made for the benefit of the common schools. The principal, which is to remain forever inviolate and may not be decreased, amounts to \$5,337,819. Of this amount, \$3,684,680 is invested in real estate mortgages, and the remainder is in state and county bonds. A cash balance of \$268,639 is deposited in the bank. The income

from this fund is used for the maintenance of the schools in the state.

General and special funds.—As a territory, Oklahoma had many funds holding investments, but when it became a state all of these with the exception of the school fund were united under the heading "General and special funds." In 1912 these funds held cash balances aggregating \$1,118,538.

Table 41 gives a summary of the debt, funds and investments, and sinking fund assets, from 1893 to 1912. No reports were received for 1909 and 1911.

In each year the debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year indicated the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows a heavy increase in the bonded indebtedness, \$48,000 being the outstanding amount from 1893 to 1903, increasing to \$3,055,000 in 1912. The floating debt also shows a marked increase—from \$27,321 in 1893 to \$3,875,243 in 1912.

¹ Not reported.

In the funds and investments the securities increased from \$45,516 in 1893 to \$5,069,180 in 1912. The cash also shows marked increase during the period.

No sinking fund assets, as such, are recorded in any

year; hence the debt less sinking fund assets is the same as the total debt. The per capita debt increased from \$0.06 in 1893 to \$3.74 in 1912, due to the heavy increase in the funded debt.

OREGON.

Funded debt.—On September 30, 1912, the funded debt of Oregon, amounting to only \$653, was made up of three small sums which represent soldiers relief, Modoc War, and Indian War bonds, long overdue but never presented for payment.

Floating debt.—The only floating debt consists of warrants, to the amount of \$30,199, drawn on the general and the miscellaneous funds and outstanding on September 30, 1912.

Common school fund.—A permanent irreducible school fund is derived from the sale of the sixteenth and thirty-sixth sections of each township; moneys which may be paid as exemptions from military duty; the clear proceeds of all property which may accrue to the state by escheat or forfeiture; the proceeds of all gifts, devises, and bequests made by any person to the state for common school purposes; the proceeds of all property granted to the state when the purpose of such grant is not stated; the proceeds of the 500,000 acres of land to which the state is entitled by the provisions of an act of Congress approved 1841; and 10 per cent of all moneys received from the sale of swamp, overflowed, and tide lands which have been granted to the state by the United States. On September 30, 1912, this fund amounted to \$6,252,549, of which amount, \$5,550,764 has been loaned on notes secured by real estate mortgages. The remainder of the fund, with the exception of a small cash balance, is invested

in school district bonds and certificates of sale of state land. The income from these investments is distributed among the several counties in proportion to the number of children in each county between the ages of 4 and 20 years.

University fund.—By an act of Congress of 1859, 46,080 acres of land were set apart and reserved for the use and support, in such manner as the legislature might prescribe, of the state university. The proceeds arising therefrom, together with an annual tax upon all taxable property in the state, are invested in first mortgage loans on real property within the state.

Agricultural college fund.—The endowment fund of this college was derived from the sale of 90,000 acres of land granted by Congress under an act of 1862 for the support of institutions of learning for the benefit of agriculture and the mechanic arts. This fund is invested in secured notes, and on September 30, 1912, had real estate mortgages and other assets amounting to \$201,384.

A. R. Burbank trust fund.—This fund is derived from the proceeds of the sale of property bequeathed by A. R. Burbank to the state, to be held in trust by the orphans' homes at Salem and Portland, Oreg. First mortgage loans on real property within the state, to the amount of \$24,350, and a small cash balance make up the principal of the fund.

Thurston monument fund.—This fund represents the amount that was due Samuel R. Thurston, the first delegate in Congress from the territory of Oregon, for pay while serving as a member of the legislature of the provisional government of Oregon territory, during the session of 1848-49. The principal of \$120 is invested in a note secured by a first mortgage on real estate.

General and special funds.—The state has numerous special funds with cash balances to their credit, and these balances are all reported with the cash of the general fund under the common title "General and special funds."

Table 42 gives a biennial summary of the debt, funds and investments, and sinking fund assets.

¹ Not reported.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year indicated the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows an insignificant bonded indebtedness for every year after 1880. The floating debt is also small, increasing from \$670 in 1890 to its highest point, \$279,668, in 1900. It

fluctuates from that year to 1912 when it shows only \$30,199.

In the funds and investments the securities show a steady increase throughout the period covered. The cash items changed from year to year, reaching the maximum amount, \$1,137,576, in 1902.

No sinking fund assets, as such, are recorded in any year; hence the debt less sinking fund assets does not differ from the total debt. The per capita debt with the exception of 1880 is very small, varying from \$0.01 in 1890 to \$0.68 in 1900 and \$0.04 in 1912.

PENNSYLVANIA.

Funded debt.—On November 30, 1912, the funded debt of Pennsylvania consisted of two series of state bonds and two nonnegotiable obligations to the state agricultural college. Of the two series of negotiable bonds, one, amounting to \$8,050, issued in 1881 for refunding purposes, matured on February 1, 1912. The other, also overdue, is made up of small amounts of unfunded debt and debt upon which the interest has ceased. This series, amounting to \$134,110, consists of relief notes issued by banks; unclaimed and outstanding interest certificates issued to the holders of public loans for interest due thereon;

unclaimed certificates issued "to sufferers in Chambersburg," under act of 1871; domestic creditors' certificates; and bonds issued for miscellaneous purposes, upon which the interest has ceased. A non-negotiable bond of \$500,000, maturing in 1922, was issued to the agricultural college to reimburse said college for money derived from the sale of land scrip and used by the commonwealth. An amount of \$17,000, representing the proceeds of the sale of the eastern and western experimental farms, is held in the state treasury to constitute a perpetual fund, the income therefrom to be paid to the agricultural college.

Floating debt.—There is no floating debt reported for Pennsylvania.

Sinking fund.—This fund is by law derived from the proceeds of the sale of public works or any part thereof; from the income or proceeds of the sale of any stocks owned by the commonwealth; and from other sources that may be designated by law. The fund is also from time to time increased by transferring to it a part of the taxes or other revenue of the state not required for current expenses of the government. The only asset of this fund on November 30, 1912, consisted of a cash balance of \$785,511.

Agricultural college fund.—This fund consists of

nonnegotiable obligations of the state, to the amount of \$517,000, granted to the fund to reimburse it for land scrip donated to the state by Congress, and from moneys derived from the sale of the experimental farm.

General and special funds.—Under this heading are reported the cash balances of all administrative funds, aggregating \$8,996,340, and stock held by the state in certain canal and navigation companies, valued at \$414,955.

Table 43 gives a summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912, and also the same data for 1880.

¹ Sinking fund assets exceed debt.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year indicated the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows a great reduction in the bonded indebtedness, amounting to \$20,919,830 from 1880 to 1912. The special debt obligations to public trust funds remain practically unchanged.

In the funds and investments the securities decreased \$6,401,112 during the period. The cash shows the

natural fluctuations from year to year, and an increase of \$7,966,804 in 1912 over 1880.

The sinking fund assets show a steady decrease—from \$8,143,310 in 1890 to \$785,511 in 1912. On account of the unusually large amounts recorded as sinking fund assets, the debt less sinking fund assets is materially less than the total debt, decreasing to 1909, when it disappears as a result of the excess of sinking fund assets over the total debt. The per capita debt is at no time significant, because of the heavy assets in the sinking fund; the decrease from \$0.80 in 1890 to \$0.01 in 1908 being due largely to the decrease of the bonded indebtedness.

RHODE ISLAND.

Funded debt.—On December 31, 1912, the funded debt of Rhode Island consisted of five issues of state-house construction bonds, three issues of highway construction bonds, and one issue each of armory construction, penal and reformatory construction, harbor improvement, and metropolitan park bonds, a grand

total of \$5,580,000. The metropolitan park bonds, while a direct obligation of the state, constitute, nevertheless, a contingent debt incurred for the benefit of the several towns and cities included in the metropolitan park system. Payment must eventually be met by assessment on the towns and cities benefited.

Floating debt.—The floating debt of Rhode Island in 1912 consists of a private trust of \$70,308, and state notes, amounting to \$150,000.

Sinking fund.—This fund, amounting to \$673,493 in 1912, is under the control of the sinking fund commissioners, who have invested the funds in municipal and school district bonds and notes. The fund also receives an additional appropriation each year, sufficient to pay the state debt as it matures.

School fund.—A permanent school fund was provided for in the state constitution. The state treasurer is the custodian of the fund, which is kept securely invested, thus providing a perpetual income for common school purposes. Of this fund in 1912, \$242,300 is invested in state bonds, municipal bonds and notes, and bank stock.

Touro Jewish Synagogue fund.—This private trust

fund resulted from a bequest of Abraham Touro for the support and repair of Jewish synagogues and the walls of Jewish burying grounds, in the city of Newport. The state treasurer has charge of the fund, which is invested in municipal and school district bonds and bank stock.

Land grant fund.—The principal of this fund was derived from the sale of land donated by Congress for the extension of agricultural education. In 1912 the fund consisted of \$50,000 in cash.

General and special funds.—Under this title are consolidated all cash balances of the general and special administrative funds, which amounted in 1912 to \$646,352.

Table 44 gives a summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912, and also the same data for 1880.

¹ Sinking fund assets exceed debt.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year the total and per capita debt less sinking fund assets, as well as the debt less sinking fund assets less the metropolitan districts, and the per capita rate thereof. This latter amount is the real debt of the state, "metropolitan districts" being a debt of the various cities and towns assumed by the state and met by assessments levied upon the cities and towns, for the purpose of maintaining the metropolitan parks. This debt first appeared in 1908. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows the funded debt of the state to consist wholly of bonds. The amount

outstanding varies, showing only \$699,000 in 1893, and reaching \$5,580,000 in 1912.

The floating debt varies, ranging from \$51,218 in 1890 to \$320,135 in 1908.

In the funds and investments the securities for four years, namely, 1880, 1890, 1891, and 1893, reach over a million dollars; but the following years indicate quite a reduction, and the highest amount after 1893 is \$895,660, occurring in 1909. The amount of cash varies in each report, showing \$122,842 in 1890 and \$1,777,646 in 1894.

The sinking fund assets vary, showing quite a reduction between 1893 and 1894, but from that year on the general tendency is to increase. For the year 1893 there is practically no debt, as the sinking fund is in excess of the debt.

The per capita debt shows quite a few changes, varying from \$0.53 in 1892 to \$9.02 in 1912. This difference is due largely to the increase in bonded indebtedness.

The per capita debt, after the metropolitan districts have been withdrawn, shows an increase from \$6.54 in 1908, the year in which this debt first appears, to \$8.58 in 1912.

SOUTH CAROLINA.

Funded debt.—On December 31, 1912, the funded debt of South Carolina consisted of various issues of bonds, to the amount of \$6,694,504, of which \$164,374 are old issues on which the interest has ceased—the rest are for refunding and redemption purposes; also special debt obligations to the agricultural college of \$191,800 and the Clemson fund of \$58,539.

Floating debt.—The floating debt at the close of the fiscal year consists of outstanding warrants, temporary loans, and a private trust fund, aggregating \$417,371.

Sinking fund.—In 1912 the sinking fund, amounting to \$921,839, consists of two funds under the control and supervision of the state sinking fund commission, the first of which was established for the reduction of the bonded indebtedness of the state, and the second to bear the expense of the sinking fund commission. These funds are invested in South Carolina bonds and real estate mortgages.

Permanent school fund.—This fund, amounting to \$65,604 in 1912, was established in 1896 by an act providing that all gifts to the state for schools, and all other gifts where the object of donation was not designated, and all escheated property, together with such other means as the general assembly shall approve, shall form a perpetual school fund to be invested in state bonds bearing 6 per cent interest.

Agricultural college fund.—The principal of this fund was originally derived from the sale of land donated by Congress for the benefit of agricultural and me-

chanical education. The fund, amounting to \$191,800, is equally divided between the Clemson Agricultural College, maintained for white students, and the Colored Normal and Industrial School, maintained for colored students.

Clemson fund.—This fund of \$59,097 was established by a bequest of Thomas G. Clemson to the state of South Carolina for the benefit of agricultural and mechanical education; \$58,539 of this fund is invested in perpetual 6 per cent South Carolina special debt obligations, held by the board of trustees of the Clemson Agricultural College; the balance represents a small uninvested sum.

Escheated estates fund.—This fund, the title of which is self-explanatory, amounted in 1912 to \$576, and is held in trust by the commissioners of the sinking fund.

State insurance fund.—The principal of this fund was derived by an act providing that each county in the state and the state treasurer should pay annually to the commissioners of the sinking fund one-half of all premiums paid for insurance on state and county public buildings. This money was to be invested by them for the purpose of creating an insurance sinking fund. The fund is limited to \$200,000. In 1912 the fund has \$59,546 invested in real estate mortgages.

General and special funds.—The cash in the general fund of the state and in the funds for the several state institutions amounted to \$545,283 at the close of the fiscal year 1912.

Table 45 gives a summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912, and also the same data for 1880.

The total debt, also funds and investments are given, and for each year the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows that the funded debt consists principally of outstanding bonds, the greatest amount being \$7,286,496 in 1880, while the other years vary a little, the general tendency being to decrease. Only one change takes place in the special debt obligations to public trust funds, increasing from \$191,800 in 1893 to \$250,339 the following year.

The floating debt fluctuates, reaching the maximum amount of \$516,514 in 1904.

In the funds and investments the securities show decided changes, increasing from \$191,800 in 1880 to \$1,212,893 in 1911, which is the maximum. The cash fluctuates, and shows a decided tendency to increase.

After 1894 the sinking fund assets materially increase, with the exception of the years 1903, 1904, and 1912, which latter year shows only a slight decrease from that of the year preceding.

The per capita debt was reduced from \$7.51 in 1880 to \$3.98 in 1912, with the exception of a very slight increase in 1902, 1903, and 1904. The decrease in the per capita debt is due chiefly to the steady increase in population.

SOUTH DAKOTA.

Floating debt.—On June 30, 1913, South Dakota had no funded debt, the only debt of the state reported being \$370,000 of revenue warrants.

Common school fund.—The state constitution provides that all proceeds of the sale of public lands granted by the United States, the proceeds of all escheats, forfeitures, gifts, donations, surplus revenue, and all other property acquired for the public schools shall remain a perpetual fund, held in trust by the state, for the maintenance of the public schools. The principal shall forever remain inviolate, and may be increased but not diminished, and the state shall make good any loss that may occur.

Agricultural college fund.—This fund was established by an act of the legislature, under the congressional

provision of 1862, which gave 120,000 acres of public lands for the purpose of founding an agricultural and mechanical college in South Dakota.

Other public trust funds.—Under this title are included the funds of a number of educational, charitable, and reformatory institutions. The principal of each of these various funds was derived from the proceeds of the sale of endowment lands, granted by the state for the purpose of founding and maintaining these state institutions.

General and special funds.—These consist of the cash balances of all administrative funds.

Table 46 gives a summary of the debt, funds and investments, and sinking funds assets, for 1890 and from 1892 to 1913.

¹ Does not include regents' fund, not shown by auditor.

² Not reported.

The total debt, also funds and investments are shown, and for each year indicated the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows a bonded indebtedness amounting in 1890 to \$860,200, but increasing to \$1,040,200 in 1892, and then gradually decreasing, until in 1907 it disappeared. The floating debt fluctuated greatly, reaching the maximum amount of \$835,425 in 1910, and in 1913 it fell to \$370,000.

In the funds and investments the securities show a steady increase, reaching the highest amount, \$10,862,995, in 1913. The cash shows a most decided change in the various years, ranging from \$10,053 in 1890 to \$1,001,835 in 1912.

The sinking fund assets were never very large, and disappeared altogether in 1907, owing to the fact that there was no bonded indebtedness. The per capita debt of the state varies, the maximum being \$4.09 in 1895, when the indebtedness is the greatest, and the minimum \$0.58 in 1913, when the floating debt proved the only indebtedness of the state.

TENNESSEE.

Funded debt.—On December 20, 1912, the funded debt of Tennessee is made up of four series of negotiable bonds. Of the negotiable bonds, one issue, amounting to \$335,666, represents old unfunded bonds held by the United States Government awaiting a settlement of claims between the state and the Federal Government. The state, however, reports claims against the United States Government which will offset these bonds. The two issues of general refunding bonds, known as the "new settlement

bonds" and the "redemption bonds of 1893," amounting to \$9,222,000 and \$1,000,000, respectively, makes up the greater part of the bonded debt. The fourth issue of bonds, for \$600,000, provided for the erection of a state penitentiary.

Certificates of indebtedness are held by charitable and private educational institutions and by the University of Tennessee, and interest is paid to the various institutions holding the certificates at the rates of 5 and 6 per cent.

¹ Not reported.

² Special debt obligation of \$2,512,500 not reported after 1900, either as a debt or an asset.

Floating debt.—State warrants outstanding, to the amount of \$18,060, constitute the floating debt.

Sinking fund.—This fund was created for the purpose of retiring the bonded indebtedness by the setting aside of 10 per cent of the gross receipts of the state, less the penitentiary receipts. Before 1912 this sink-

ing fund act had been suspended, and there remained on December 20 a cash balance of \$86.

University and agricultural college fund.—The principal of this fund was derived from the sale of land scrip donated by Congress under an act passed in 1862 and under subsequent acts which provided for a

permanent endowment fund for an agricultural college. The only assets of the fund are state certificates of indebtedness, amounting to \$405,000.

General and special funds.—The cash balances of all administrative funds, aggregating \$878,223, are consolidated and reported under this heading.

Table 47 gives a biennial summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912, also the same data for 1880.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows the bonded indebtedness in 1880 to have been \$21,445,508, but

from that year on a steady decrease is noted. The special debt obligations to public trust funds vary slightly, being the greatest in 1898 and 1900, but have been dropped as a liability after 1900.

The floating debt was exceedingly heavy in 1880, being \$6,448,660, but shows a fluctuating decrease in the following years, going as low as \$2,972 in 1906.

In the funds and investments it will be noted that the securities remain the same from 1880 to 1900, after which year they drop to \$405,000 and remain the same until 1912. The cash varies, fluctuating from \$31,233 in 1892 to \$1,258,997 in 1906.

The sinking fund assets are extremely small, hence the debt less sinking fund assets shows slight difference from the total debt.

The per capita debt declined steadily from \$19.97 in 1880 to \$5.32 in 1912, due to the decrease in the bonded indebtedness and increase in population.

TEXAS.

Funded debt.—In 1912 the funded debt of Texas, consisting wholly of bonds issued for refunding purposes, amounted to \$3,977,500. The state bonds are owned and held as follows: The state school fund, \$2,772,000; the state university, \$603,600; the state blind asylum, \$134,400; the state deaf and dumb asylum, \$104,300; the state lunatic asylum, \$126,300; the state orphan asylum, \$30,600; the state agricultural and mechanical college, \$205,000; and private individuals, \$1,300.

Floating debt.—At the close of the fiscal year the floating debt consists of a private trust fund of \$599,318 and outstanding warrants to the amount of \$79,681.

Permanent school fund.—The school fund, amounting in 1912 to \$67,749,083, was provided for as follows: The state constitution provides that each alternate section of land reserved by the state out of grants made to railroads or other corporations and one-half the public domain (later legislation has also added all land recovered by the state through suits), shall constitute the permanent school fund. The law further provides that all lands in unorganized counties sold for taxes and not redeemed within two years shall revert to the school fund. The poll tax of \$1 on all male inhabitants between the ages of 21 and 60 years, the interest from the invested funds of the permanent school fund, and such sums from the general revenue as the legislature shall from time to time appropriate, shall constitute the available school fund. In 1912 the fund is invested in state, county, school district, and railroad bonds, and in real estate mortgages.

Permanent university fund.—The principal of this fund was derived from the proceeds of the sale or lease of 2,000,000 acres of land set apart by the state for the benefit of the state university. In addition, all other grants, donations, and appropriations that may be received from any source are added to the fund. In 1912 the fund invested in Texas bonds and real estate mortgages amounts to \$642,622.

Endowment fund.—This endowment of \$5,000 for the benefit of the medical branch of the state university is invested in Texas bonds, with a cash balance of \$772.

Agricultural and mechanical college fund.—This fund was established from the proceeds of the sale of 180,000 acres of land donated by Congress for the purpose of advancing agricultural and mechanical education. It is a perpetual fund, and amounted to \$207,654 in 1912, invested in Texas bonds, with a cash balance of \$2,654.

Asylum funds.—These funds were established by an act of the legislature setting apart 400,000 acres of land for the blind, deaf and dumb, lunatic, and orphan asylums—100,000 acres for each institution. The proceeds from these lands are credited to the fund of the proper asylum and constitute a permanent fund for the endowment of the institution. The total amount of these funds in 1912 was \$590,504, invested in Texas bonds and real estate mortgages, with small cash balances.

Escheated estates fund.—This fund is derived from escheated estates, and the proceeds are subject to the disposition of the state legislature. On August 31, 1912, this fund held treasury notes for \$375, and \$5,549 in cash.

Bank guaranty fund.—This is a private trust fund, the title being self-explanatory. In 1912 the state held \$599,318 in cash for this fund.

General and special funds.—All general and special administrative funds whose only assets are cash on hand are tabulated under this heading.

¹ Not reported.

Table 48 gives an annual summary of the debt, funds and investments, and sinking fund assets, for 1880 and from 1890 to 1902; from this period until 1912 a biennial summary is shown.

In each year the total debt is given, together with the general classes thereof. Corresponding data are shown for funds and investments. The table also shows for the years indicated the total and per capita debt less sinking fund assets. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows that the funded debt consists wholly of outstanding bonds. After 1891 the amount of bonded indebtedness practically remains unchanged. The floating debt fluctuated considerably, varying from \$375 to \$760,496. The years 1902, 1904, 1906, and 1908 do not show any floating debt.

In the funds and investments the securities increased from \$4,086,101 in 1880 to \$69,079,149 in 1912. In 1899 the securities increased in a marked degree, from \$7,545,138 to \$35,867,674 in 1900, decreasing in 1901 to \$10,237,818. From this year a steady increase is noted until the maximum is reached in 1912. The cash fluctuated between \$444,943 in 1894 and \$3,396,312 in 1899. For 1912, \$1,392,735 in cash is reported.

No sinking fund is reported for any year except 1880, and then the amount was only \$6,800, which sum is not sufficient to lessen the debt to any extent. However, the increase in the population of the state has resulted in a steady decrease in the per capita debt, with the exception of the last year, when the per capita debt shows a slight increase over that for the preceding year, owing to the debt being increased by an unusually large floating debt.

UTAH.

Funded debt.—On November 30, 1912, the funded debt of Utah consisted of five series of bonds, outstanding to the amount of \$1,210,000. The bonds issued prior to 1902 were all authorized for refunding purposes, for meeting deficits in revenues for general purposes, for the payment of territorial indebtedness assumed by the state, and for refunding outstanding bonds of the territory. In 1911 the state issued \$300,000 in bonds for the purpose of securing funds with which to erect a central building at the state uni-

versity and \$260,000 additional bonds for the purpose of state road building.

Floating debt.—Utah reports \$219,694 of outstanding warrants as the only floating debt.

School funds.—The school funds of Utah are derived from the sale of lands donated to the state by the United States for educational purposes. Only a small proportion of these lands appears to have been sold. The proceeds of such sales are invested by the state board of land commissioners, in whose custody all

securities belonging to these funds are held. In 1912, these investments amount to \$1,769,535.

University land and other public trust funds.—Land grants have been made to the following funds: University land, agricultural college, normal school, reform school, school of mines, institute for the blind, deaf and dumb asylum, insane asylum, miners' hospital, reservoir, public building, and redemption funds. The proceeds of any land sales are invested in interest bearing securities by the state board of land commissioners, in whose custody all such securities are held. These

funds are invested in county, municipal, school district, and irrigation district bonds and in mortgages, and warrants.

General and special funds.—The special administrative funds of the state, which are quite numerous, are derived generally from taxation; their cash balances are reported with those of the general fund under the common heading, "General and special funds."

Table 49 gives a summary for the years 1890 to 1912. A floating debt for 1880 represents the only indebtedness for that year.

¹ Not reported.

Where it has been possible, the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year reported the total and per capita debt are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows the bonded indebtedness of the state to have materially increased since 1890. Bonds to the amount of \$450,000 were issued in that year, while in 1911 they had increased to \$1,460,000, declining in 1912 to \$1,210,000. Special debt obligations to public trust funds amounting to

\$100,000 in 1900 decreased to \$25,000 in 1906, and disappeared after that year.

The floating debt fluctuated considerably, ranging from \$9,120 in 1880 to \$286,108 in 1910.

In the funds and investments the securities for the years reported show a decided increase from the minimum of \$100,775 in 1897 to \$3,216,318 in 1912. The cash fluctuated, the most noticeable changes being in the years 1908, 1910, and 1912.

No sinking fund assets are recorded in any year, thus leaving the debt less sinking fund assets the same as the total debt. The per capita debt was \$2.13 in 1890, while the maximum of \$4.16 was reached in 1911.

VERMONT.

Funded debt.—On June 30, 1913, the funded debt of Vermont amounted to \$346,631 and consisted wholly of special debt obligations to public trust funds. These obligations were to the Huntington fund (now transferred to the school fund), and a state certificate issued to the agricultural college.

Floating debt.—At the close of the fiscal year June 30, 1913, the floating debt included temporary loans of \$200,000 and outstanding warrants of \$23,275.

Permanent school fund.—This fund was established by an act of the general assembly in 1906, which both created the fund and assigned thereto three historic state funds, namely, the United States deposit money, the Huntington will fund, and the Civil War claims—thus making a disposition of these three great items which insures their definite and honorable use in the educational policy of the state. The management, investment, and distribution of this fund is intrusted to a board of trustees. The investments which may be made are limited to United States bonds, state bonds, and bonds of cities and school districts of over 20,000 population and whose indebtedness does not exceed 5 per cent of their assessed valuation. This fund in

1913 amounted to \$1,171,328, and the assets include bank deposits, United States deposits, municipal and other state bonds, with a large cash balance.

Agricultural college fund.—This fund was derived from the sale of land scrip granted by Congress. In 1913 the only asset of the fund is a state certificate of indebtedness for \$135,500, which is tabulated as a special debt obligation to public trust funds.

The Huntington fund.—The Huntington fund was left to the state by the will of Araunah Huntington. The securities were sold and the money used for state purposes. In 1905 this sum, aggregating \$211,131, was transferred to the permanent school fund as a special debt obligation to public trust funds.

Bennington battle monument fund.—This fund, the title of which is self-explanatory, in 1913 consists of a bank deposit of \$1,065, drawing 4 per cent interest.

General and special funds.—The cash in the general fund of the state and in the funds for the different state institutions on June 30, 1913, amount to \$254,605.

Table 50 gives a summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1913, and also the same data for 1880.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year indicated the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows that all the bonds

were paid off prior to 1890. The floating debt fluctuated, but the close of the period shows an increase over the beginning. The special debt obligations to public trust funds remained unchanged from 1891 to 1913.

In the funds and investments the cash fluctuated from \$62,635 in 1891 to \$591,329 in 1910, decreasing to \$313,003 in 1913. The securities remained stationary

from 1891 to 1902, slightly decreased for two years, then steadily increased until the close of the period.

Vermont has no sinking fund assets; therefore the debt less sinking fund assets remains the same as

the total debt. The per capita debt fluctuated from the beginning to the close of the period, being \$0.45 in 1880 and \$1.58 in 1913. Its highest point, however, was reached in 1899, when it showed \$2.02.

VIRGINIA.¹

Funded debt.—On September 30, 1912, the funded debt of Virginia consisted of state bonds to the amount of \$22,094,944; nonnegotiable certificates amounting to \$1,764,124, issued to state educational institutions and tabulated as special debt obligations to public trust funds; and corresponding certificates to the value of \$703,482, issued to educational institutions not under state control and tabulated as special debt obligations to private schools and colleges. Of the state bonds, \$177,488 are old bonds on which the interest has ceased; the rest are refunding issues of old bonds issued for internal improvements.

Floating debt.—At the close of the fiscal year 1912 the floating debt consists of \$92,301 outstanding warrants.

Sinking fund.—The sinking fund commissioners hold the following securities: Railroad stock, \$584,900; state bonds, \$189; and unproductive West Virginia certificates, \$2,026,439.

Literary fund.—This fund, which is under the control of the board of education, the income of which is used for the support of public schools, is derived from the proceeds of the sale of lands granted by Congress

for school purposes, from escheats, waste and unappropriated state lands, forfeits, fines, donations, and sums appropriated by the state legislature. On September 30, 1912, the assets of the fund amounted to \$3,289,256. These assets include Virginia bonds, school district and municipal bonds, West Virginia and school certificates, and a large cash balance. The West Virginia certificates are of uncertain value.

Dawson fund.—The principal of this fund originated from a gift, by the will of Martin Dawson, of \$35,588 of invested funds, of which \$1,400 is in state bonds, and \$34,188 in school and college certificates, the interest on which is paid to the treasurers of Albemarle and Nelson Counties, to be expended for common school purposes.

University of Virginia fund.—The principal of this fund, which constitutes a perpetual endowment of \$148,600, is secured by registered state certificates of indebtedness, and tabulated as a special debt obligation to public trust funds.

Virginia Military Institute fund.—This fund of \$20,000 is a perpetual endowment, and is secured (and tabulated) similarly to the state university fund.

Virginia Agricultural and Mechanical College fund, and Hampton Normal and Agricultural Institute fund.—These funds originated in a grant from Congress of scrip for the benefit of agricultural and mechanical

education. In Virginia the proceeds of this grant have been divided between two institutions—two-thirds to the agricultural and mechanical college (now Virginia Polytechnic Institute) and one-third to the Hampton

¹See also statement for West Virginia.

Normal and Agricultural Institute. The assets in 1912 consisted of state registered certificates, \$344,312 of which are credited to the first-named institution and \$172,156 credited to the second.

Miller Manual Labor School fund.—This fund is the result of a bequest by Samuel Miller for the purpose of establishing a manual training school for destitute white children in Albemarle County. The assets of this fund include \$1,044,868 of state registered certificates, tabulated as a special debt obligation to public trust funds; \$70,000 in institute bonds, \$331,300 in municipal bonds, and \$16,423 in cash.

Retired teachers' fund.—This fund was established for the purpose of providing a pension for retired teachers. The income is derived by an assessment of 1 per cent on the salary of all public school teachers, from appropriations, and from interest on its investments. In 1912 this fund held \$50,000 of state bonds, \$700 of municipal bonds, and \$13,073 in cash.

General and special funds.—These consist of the cash balances of all administrative funds.

Table 51 gives a summary of the debt, funds and investments, and sinking fund assets, from 1890 to

1912, and also the same data for 1880. In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year indicated the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows a slightly decreasing bonded indebtedness. The special debt obligations to public trust funds have remained practically stationary since 1892, which year shows a marked increase over the two previous years. The floating debt has rapidly decreased from \$9,387,221 in 1891 to \$92,301 in 1912.

In the funds and investments both cash and securities fluctuate considerably, the period closing with a decided decrease in the cash and with a lesser decrease in the securities.

The sinking fund assets decreased steadily. The debt less sinking fund assets is in no year markedly less than the funded debt. The per capita debt decreased from \$21.66 in 1880 to \$10.46 in 1912.

WASHINGTON.

Funded debt.—On September 30, 1912, the funded debt of Washington consisted of \$125,000 of state highway bonds, issued for the purpose of purchasing the Wenatchee Bridge; and \$206,024 of normal school series bonds, for the purpose of erecting and equipping two state normal schools.

Floating debt.—At the close of the fiscal year 1912 the floating debt included \$227,600 of general fund warrants, \$534,646 of capitol building warrants, and \$462,742 of Alaska-Yukon-Pacific Exposition warrants.

Permanent school fund.—The principal of this fund is derived from the proceeds of school and state lands, appropriations, donations, escheats, forfeitures, and surplus revenue, 5 per cent of the proceeds of state lands sold by the United States, and such other funds as the legislature may provide. The assets of the fund in 1912 are \$537,000 of county bonds, \$4,811,840 of school district bonds, \$3,137,466 of municipal bonds, and \$478,361 cash.

Agricultural college fund.—The principal of this fund was originally derived from grants by Congress. It amounted in 1912 to \$173,529, and is invested in school district and municipal bonds, with a small cash balance.

Charitable, educational, penal, and reformatory institutions fund.—This fund of \$270,826 represents the endowment of the charitable, educational, penal, and reformatory institutions, and the revenue from this permanent fund is apportioned among these several

institutions as the legislature provides. In 1912 this fund is invested in county, school district, and municipal bonds.

Normal school fund, scientific school fund, and the University of Washington fund.—These permanent funds of the state were derived principally from the sale of granted lands and hold the following investments: The normal school fund, \$164,607 of school district and municipal bonds; the scientific school fund, \$251,579 of school district and municipal bonds; and the University of Washington fund, \$94,811 of school district bonds. The above figures include the cash balances.

Accident fund.—This fund, created in 1911 under the workingmen's compensation act, is self-explanatory. All the resources of the fund are to be devoted exclusively to compensating injured workingmen. The assets of this fund in 1912 include \$151,500 school district bonds, \$87,500 municipal bonds, and \$350,184 in cash.

General and special funds.—All administrative funds with only cash assets are reported under this title.

Table 52 gives a biennial summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year indicated the total and per capita debt less sinking fund assets are included in the table.

In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows that the bonded indebtedness remained stationary from 1890 to 1896;

then decreased steadily; disappearing altogether in 1904; reappearing in 1910; and increasing to \$331,024 in 1912. No special debt obligations appear until 1900; the amount fluctuated until 1910, and disappeared in 1912.

¹ Not reported.

The floating debt fluctuated greatly throughout the period, reaching the maximum amount in 1896; then decreased until 1904, when a steady increase began until the close of the period, when it amounted to \$1,224,988. In the funds and investments the cash

varied throughout the period, with an increasing tendency, while the securities show a steady increase, with the exception of the year 1898. No sinking fund assets are reported. The per capita debt decreased, due to the large increase in the population.

WEST VIRGINIA.

This state is not charged with any specific debt at the time this was written. In the settlement of the Virginia debt one-third was set apart as the share belonging to West Virginia, but the latter refused to assume the same. In March, 1911, the United States Supreme Court held the state liable for a principal debt of \$7,182,507 and left the question of interest for adjustment between the parties. However, no settlement of the question has been made.

School fund.—The constitution of the state provides that the school fund of the state shall be derived from the following sources: All moneys accruing to the state from forfeited, delinquent, waste, and unappropriated lands; all grants, devises, or bequests made to the state for the purpose of education, or in the cases where the purposes are not specified; the state's share of the literary fund of Virginia, and any sums of money, stocks, or property which the state may have the right to claim from the state of Virginia for educational purposes; the proceeds of all escheated estates

and those of persons dying without an heir; taxes levied upon the revenues of corporations; moneys paid as an equivalent for exemptions from military duty; and such sums as may be appropriated by the legislature for the purpose. On September 30, 1912, this fund amounted to \$1,000,000, and is invested in county, municipal, and school district bonds and in loans, together with a small cash balance of \$26,800. According to an act of the legislature of 1901 the principal of this fund has reached its limit when it equals \$1,000,000, and all money to the credit of the fund over that sum, together with the interest on said sum, shall be used for the support of the free schools of the state.

General and special funds.—Under this heading are tabulated the cash balances of two administrative funds—the state fund and the general school fund.

Table 53 gives a summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1912, and also the same data for 1880.

¹ Less than one-half of 1 cent.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year indicated the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows no debt of any kind in 1912—the floating debt, the only debt that appears

during the period, having all been paid in 1894. In the funds and investments the cash fluctuated throughout the period with an increasing tendency. The securities are also fluctuating, reaching the maximum amount, \$1,030,300, in 1904; then gradually decreasing to \$973,200 in 1912.

No sinking fund assets are reported. The per capita debt varied from \$0.24 in 1890 to less than one-half of 1 cent in 1894.

WISCONSIN.

Funded debt.—On June 30, 1913, the funded debt of Wisconsin consisted of nonnegotiable and nontransferable certificates of indebtedness, amounting in all to \$2,251,000, issued to the various educational funds for moneys borrowed for general state purposes and for the redemption of negotiable state bonds held by these funds.

Floating debt.—There is no floating debt for Wisconsin in 1913.

School fund.—The permanent common school fund was derived chiefly from the sale of school lands granted by the United States to aid in the establishment of a system of common schools. Besides the proceeds from the sale of such lands, the principal of this fund is composed also of proceeds from the following sources: Moneys or property accruing to the state by forfeiture or escheat, fines collected for breach of penal laws, a percentage of the proceeds of public lands, and all moneys arising from grants where purposes are not specified. In 1912 this fund held an obligation of the state in the form of certificates of indebtedness, amounting to \$1,563,700. A cash balance of \$64,159 and loans to counties, cities, etc., and

real estate mortgages, go to make up the remainder of the principal of this fund, which totals \$4,182,406. The interest from these investments together with all other revenues derived from the school lands are apportioned among the various counties for the support and maintenance of the common schools.

University fund.—The proceeds from grants of land by the United States to the state for the support of a university go to make up the principal of the university fund, the interest of which is appropriated to the support of the state university. On June 30, 1913, this fund, like the school fund, held state certificates of indebtedness for the amount of the fund diverted to general uses (\$111,000). A part of the fund is loaned out to counties, cities, etc., and the remainder consists of real estate mortgages and cash.

Agricultural college fund.—This fund is derived from the sales of land granted by Congress for the support of an institution of learning in which the principles of agricultural and mechanical arts should be taught, and the income of this fund is devoted to such a purpose. The principal of the fund amounts to \$303,595, of

which \$215,523 is loaned to counties, cities, etc., \$60,600 has been used by the state, but is secured by certificates of indebtedness, and the remainder is in real estate mortgages and cash.

Normal school fund.—This fund consists of one-half of the proceeds from the sales of all swamp and overflowed lands received by the state from the United States and all land granted to the state to reimburse it for swamp lands sold by the General Government. The principal of the fund amounts to \$1,957,954, and like the other school funds is invested, all except a small cash balance, in state certificates, loans to counties, cities, etc., and real estate mortgages.

University trust fund.—This fund is derived from

bequests, donations, and securities, given to the regents of the university, the income to be expended as stipulated by the donors. The principal amounts to \$142,104, the greater part of which is invested in real estate mortgages and notes.

General and special funds.—The purely administrative funds, with only cash assets on hand, are all reported under this heading, as are also several funds tabulated as "private trust funds" in the previous reports.

Table 54 gives an annual summary of debt, funds and investments, and sinking fund assets, from 1890 to 1902; a biennial summary of the same items, from 1902 to 1912; and also the same data for 1913 and for 1880.

¹ Not reported.

In each year the debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year indicated the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows no bonded debt since 1880. The special debt obligations to public trust

funds remained stationary throughout the period. The floating debt fluctuated from year to year, and disappeared after 1902.

In the funds and investments the cash fluctuated with an increasing tendency; the securities steadily increased from \$4,166,866 in 1880 to \$6,652,065 in 1913.

No sinking fund assets are reported. The per capita debt decreased from \$1.87 in 1880 to \$0.93 in 1913.

WYOMING.

Funded debt.—On September 30, 1912, the funded debt of Wyoming amounted to \$117,000, and consists of insane asylum bonds for \$27,000, issued in 1886, and public building bonds of 1888 for \$90,000.

Floating debt.—The floating debt of Wyoming on September 30, 1912, consisted of outstanding warrants to the amount of \$5,375.

Common school permanent land fund.—The following perpetual funds for school purposes go to make up this fund: Such per cent of sale of lands as have been or may hereafter be granted by the United States; all moneys arising from the sale or lease of sections 16 and 36 in each township; the net proceeds of lands and other property and effects that may come

to the state by escheat or forfeiture, or unclaimed dividends or distributive shares of the estates of deceased persons; and all moneys, stocks, bonds, land, and other property belonging to the common school fund. To these sources of revenue must be added all other grants, gifts, and devises that may have been or may hereafter be made to the state. On September 30, 1912, this fund amounted to \$590,952, invested in school district and county bonds, and had a cash balance of \$184,142.

Agricultural college permanent fund of 1903.—In 1903 the moneys then in the agricultural college land income fund were transferred to what was afterwards known as the "agricultural college permanent fund of 1903." All moneys thereafter arising from the rentals of lands, known as "agricultural college lands," the interest and profits derived from the investment of the "agricultural college permanent land fund," and the interest and profits derived from the investment of the "agricultural college permanent fund of 1903" are to be appropriated for the support and maintenance of the agricultural college. The agricultural college permanent fund of 1903 on September 30, 1912, amounted to \$20,364, including cash to the extent of \$364, the remainder being invested

in municipal bonds. The agricultural college permanent land fund, which is derived from the sale of lands, amounts to \$9,797—invested in county, municipal, and school district bonds—and includes a cash balance of \$4,297.

Permanent land funds.—The various funds included under this heading, such as university permanent land fund, deaf, dumb, and blind asylum permanent land fund, and others, are derived from the proceeds of sale of lands and are devoted to the various purposes for which established.

General and special funds.—The state has a large number of general and special administrative funds, which are tabulated under this heading. Included also are the trust funds (\$188,023) and the various land income funds, which are derived from the rentals of leased lands, set apart for the benefit of the common school, university, etc. On September 30, 1912, the cash balance in this fund amounted to \$618,893.

Table 55 gives an annual summary of the debt, funds and investments, and sinking fund assets, from 1890 to 1902; the report then becomes biennial, closing with the year 1912; and the same data are also given for 1880. No report is made for the year 1899, and only the bonded indebtedness for 1890 is shown.

¹ Not reported.

In each year the total debt and the general classes thereof are shown. Corresponding data are shown for funds and investments, and for each year indicated the total and per capita debt less sinking fund assets are included in the table. In arriving at the per capita debt, estimates of population based on the average percentage of increase have been used.

An inspection of the table shows that the bonded indebtedness remained stationary until 1901, then decreased steadily, amounting in 1912 to only \$117,000.

No special debt obligations to public trust funds are reported during the period. The floating debt fluctuated greatly, showing a slightly smaller amount at the close than at the beginning of the period.

In the funds and investments the cash increased steadily. No securities were reported until 1900, after which date a steady advance is shown until 1912. No sinking fund assets are given; the per capita debt, however, decreased steadily owing to the increase in population.

PART III

COUNTY AND MUNICIPAL INDEBTEDNESS:
1913, 1902, AND 1890;
AND SINKING FUND ASSETS: 1913

PART III.

COUNTY AND MUNICIPAL INDEBTEDNESS: 1913, 1902, AND 1890; AND SINKING FUND ASSETS: 1913.

INTRODUCTION.

Scope of Part III.—Part III of this report presents the statistics of indebtedness of counties or parishes, and minor civil divisions; the latter including cities, villages, towns, townships, boroughs, precincts, fire districts, irrigation districts, poor districts, school districts, etc. The aggregate given in Part III is believed to include the indebtedness of every political division and subdivision of the United States, other than that of the United States Government and the 48 states whose indebtedness is set forth in Part II of this report.

Territory included in the investigation.—The tables of Part III of this report contain statistics of public

indebtedness of the counties or parishes, and minor civil divisions of the United States, exclusive of Alaska, Hawaii, Porto Rico, and the Philippines. The figures presented are, therefore, comparable with those for former census periods.

Dates for which statistics are presented.—The indebtedness shown in the tables is that reported as outstanding at the close of the fiscal year 1913; that is, the fiscal year closing between July 1, 1912, and June 30, 1913, inclusive. For purposes of comparison the tables also show the indebtedness less sinking fund assets for the years 1902 and 1890.

ACCOUNTING TERMINOLOGY.

Terms employed.—In order that the statistics contained in the tables of Part III of this report may be properly interpreted, the classification employed in their compilation and the significance of the terms used in the tabulation of the data are pointed out in the paragraphs which follow.

Indebtedness.—By the indebtedness of a civil division is meant the total amount of its debts or debt liabilities; that is, the aggregate amount of money, property, or services expressed in terms of money, which a civil division is under obligation to pay, deliver, or render.

Classes of indebtedness.—The debts or debt liabilities of a civil division may be classified in many ways and the resulting classes given many specific designations. Classified with reference to creditor, they are called actual and nominal debts or debt liabilities; classified according to the time when due and payable, they are called due and demand debt liabilities, debt liabilities not due, and unadjusted debt liabilities and claims; classified according to character of the provision made for meeting them, they fall into two principal classes: (1) funded or fixed, and (2)

floating and current, the latter being subdivided into three classes—(a) special assessment loans, (b) floating debt and revenue loans, and (c) warrants. It is this last-named classification which forms the basis of the tabulation of the data herein contained.

Funded or fixed indebtedness.—Under the designation “funded or fixed indebtedness” are included those debts evidenced by formal instruments which have a number of years to run and for the amortization of which no assets other than those of sinking funds have as yet been specifically set apart or appropriated. This class of debt obligations includes bonds, corporation stock, certificates, and other long-term debt obligations receiving various local designations.

Floating and current indebtedness.—The floating debts or floating debt liabilities of a civil division are those debts or debt obligations for the payment of which there is no cash in the treasury, or other assets specifically provided and available for meeting them when due.

The current debts or current debt liabilities of a civil division are the debts or debt liabilities for the payment or redemption of which provision is fully

made by cash on hand, by revenues (including special assessments) levied but uncollected, or by other current assets provided and appropriated for the specific purpose of their payment and redemption.

Special assessment loans.—This is the designation applied to those obligations payable from special assessments levied in proportional amounts against certain lands and collected from their owners or occupants to defray the costs of specified public improvements made, or of specified public services undertaken, in the interest of the general public where the owners or occupants of the properties receive or are assumed to receive from the improvements or services exceptional and plainly perceived benefits in excess of those accruing to the general public.

Revenue loans.—Under this designation are included all interest bearing short-term obligations, other than serial bonds, that have a fixed date of redemption not to exceed one year later than the date of their issue, or that are made payable at a date in the discretion of the authority issuing them from the proceeds of a tax levy made, or to be made, in the year of their issue; also, all judgments rendered, which remain unpaid at the close of the fiscal year. In this class are included the great mass of interest bearing obligations popularly or legally known as "revenue bonds," "revenue loans," "anticipation tax loans," "anticipation tax warrants," "temporary loans," "interest bearing warrants," and similar obligations.

Warrants.—The designation "warrants" is applied to all noninterest bearing obligations, such as warrants, orders, vouchers, and audits, due but unpaid at the close of the fiscal year.

Assets.—The term "assets" as used by the Bureau of the Census has the same meaning in governmental as in private or commercial accounts, that is, property liable for meeting the debts of or claims against the owner. It is the designation of the cash, investments, uncollected revenues, and other resources of a civil division provided and available for meeting its debts and other liabilities, exclusive of "public properties" and "public improvements."

Sinking funds.—This designation is applied to the aggregate of sums of money, including the interest accumulations on such funds, invested in securities or deposited in banks, set apart for the extinguishment of the debt of a government. In many of the states the laws require that at the time of the issue of long-term debt obligations provision shall be made for the establishment of sinking funds by annual appropriations which, together with their interest accumulations, shall become sufficient for the payment of the debt obligations at their maturity.

Civil divisions having authority to incur debt.—The authority to incur indebtedness is conferred on counties, cities, and other civil divisions by legislative acts. These acts vary widely in the different states. The following statement presents a list of the divisions em-

powered to incur indebtedness as stipulated in the laws of the several states and the District of Columbia:

ALABAMA.....	Counties, cities, towns, villages, townships, other political subdivisions.
ARIZONA.....	Counties, cities, towns, villages, townships, school districts, other political subdivisions.
ARKANSAS.....	Counties, cities, towns, school districts, drainage districts, levee districts.
CALIFORNIA.....	Counties, cities, towns, townships, boards of education, school districts, road districts, sanitary districts, sewer construction districts, irrigation districts, reclamation districts, levee districts, drainage districts, lighting districts, boulevard districts, fire protection districts, library districts.
COLORADO.....	Counties, cities, towns, townships, school districts, irrigation districts.
CONNECTICUT.....	Counties, cities, towns, boroughs, fire districts, other political subdivisions.
DELAWARE.....	Counties, cities, towns, other political subdivisions.
DISTRICT OF COLUMBIA..	The District.
FLORIDA.....	Counties, cities, towns, boroughs, townships, school districts.
GEORGIA.....	Counties, cities, towns, villages, other political subdivisions.
IDAHO.....	Counties, cities, towns, villages, townships, boards of education, school districts, road and highway districts, irrigation districts, other political subdivisions.
ILLINOIS.....	Counties, cities, towns, townships, school districts, drainage and levee districts, road districts, other political subdivisions.
INDIANA.....	Counties, cities, towns, villages, townships, other political subdivisions.
IOWA.....	Counties, cities, towns, villages, townships, school districts, other political subdivisions.
KANSAS.....	Counties, cities, townships, school districts, drainage districts.
KENTUCKY.....	Counties, cities, towns, school districts, subschool districts, other political subdivisions.
LOUISIANA.....	Parishes, cities, towns, villages, jury wards, school districts, drainage districts, sub-drainage districts, road districts, sub-road districts, navigation districts, levee districts, sewerage districts.
MAINE.....	Counties, cities, towns, plantations, water districts.
MARYLAND.....	Counties, cities, towns, villages.
MASSACHUSETTS.....	Counties, cities, towns, fire districts, other political subdivisions.
MICHIGAN.....	Counties, cities, villages, townships, school districts, road districts, other political subdivisions.
MINNESOTA.....	Counties, cities, towns, villages, townships, ditch districts, other political subdivisions.
MISSISSIPPI.....	Counties, municipalities, levee districts, drainage districts, other political subdivisions.
MISSOURI.....	Counties, cities, towns, villages, townships, school districts, drainage districts, levee districts, special road districts, other political subdivisions.

MONTANA.....	Counties, cities, towns, townships, school districts, other political subdivisions.
NEBRASKA.....	Counties, cities, towns, villages, townships and precincts, school districts, road districts, drainage districts, other political subdivisions.
NEVADA.....	Counties, cities, towns, school districts, other political subdivisions.
NEW HAMPSHIRE.....	Counties, cities, towns, fire districts, other political subdivisions.
NEW JERSEY.....	Counties, cities, towns, villages, townships, boroughs.
NEW MEXICO.....	Counties, cities, towns, irrigation districts, other political subdivisions.
NEW YORK.....	Counties, cities, villages, towns, school districts.
NORTH CAROLINA.....	Counties, cities, towns, townships, other political subdivisions.
NORTH DAKOTA.....	Counties, cities, towns, townships, school districts, drainage districts, other political subdivisions.
OHIO.....	Counties, cities, towns, townships, villages, school districts, road districts.
OKLAHOMA.....	Counties, cities, towns, townships, school districts, drainage districts.
OREGON.....	Counties, cities, towns, precincts, school districts, irrigation districts, port districts, dike districts, road districts.
PENNSYLVANIA.....	Counties, cities, boroughs, townships, school districts, poor districts, other political subdivisions.
RHODE ISLAND.....	Cities, towns, school districts, fire districts.
SOUTH CAROLINA.....	Counties, cities, towns, villages, townships, school districts, other political subdivisions.
SOUTH DAKOTA.....	Counties, cities, towns, townships, school districts, other political subdivisions.
TENNESSEE.....	Counties, cities, towns.
TEXAS.....	Counties, cities, towns, common school districts, independent school districts, irrigation districts, drainage districts, navigation districts, road districts, other political subdivisions.
UTAH.....	Counties, cities, towns, precincts, school districts, high school districts, drainage districts, irrigation districts, road districts.
VERMONT.....	Counties, cities, towns, fire districts, other political subdivisions.
VIRGINIA.....	Counties, cities, towns.
WASHINGTON.....	Counties, cities, towns, school districts, drainage districts, dike districts, slough districts, other political subdivisions.
WEST VIRGINIA.....	Counties, cities, towns, school districts, magisterial districts, other political subdivisions.
WISCONSIN.....	Counties, cities, villages, towns, school districts, drainage districts, other political subdivisions.
WYOMING.....	Counties, cities, towns, villages, townships, school districts, irrigation districts, other political subdivisions.

Total public indebtedness.—The data comprised in Part III complete that part of the inquiry into wealth, debt, and taxation that pertains to public

indebtedness. The data pertaining to national and state indebtedness are presented in Part II of this volume.

Table I, which follows, presents a summary of the indebtedness of the Nation, less cash in the Treasury available for the payment of debt, and the debt less sinking fund assets of the 48 state governments and of all minor civil divisions in continental United States.

Table I DIVISION OF GOVERNMENT.	TOTAL NET INDEBTEDNESS.			PER CAPITA NET INDEBTEDNESS.		
	1913	1902	1890	1913	1902	1890
Total.....	\$4,850,460,713	\$2,838,896,122	\$1,989,112,842	\$49.97	\$35.99	\$31.76
Nation.....	1,028,564,055	969,457,241	¹ 851,912,752	10.59	12.22	13.60
State.....	345,942,305	239,369,271	¹ 211,210,487	3.57	3.03	3.37
Minor divisions..	3,475,954,353	1,630,069,610	925,989,603	35.81	20.74	14.79

¹ Indebtedness of 1891; that of 1890 not available.

The public indebtedness less sinking fund assets of the Nation, the states, and all minor civil divisions of government in the United States amounted to \$4,850,460,713 in 1913. This is an increase of \$2,011,564,591, or 70.9 per cent, over the amount reported for 1902. During the period from 1890 to 1902 the total indebtedness increased \$849,783,280, or 42.7 per cent. The per capita indebtedness increased \$13.98, or 38.8 per cent, and \$4.23, or 13.3 per cent, respectively, during the two periods mentioned.

The net indebtedness of the National Government increased \$59,106,814, or 6.1 per cent, from 1902 to 1913, and \$117,544,489, or 13.8 per cent, from 1890 to 1902. Owing to the rapid growth in the population, the per capita debt decreased \$1.63, or 13.3 per cent, from 1902 to 1913, and \$1.38, or 10.1 per cent, from 1890 to 1902.

The debt incurred by the 48 state governments increased \$106,573,034, or 44.5 per cent, and the per capita debt increased \$0.54, or 17.8 per cent, during the period 1902 to 1913. From 1890 to 1902 the net indebtedness of the states increased \$28,158,784, or 10.1 per cent, and the per capita debt decreased \$0.34, or 10.1 per cent.

The cities, villages, towns, townships, school districts, drainage, irrigation, and levee districts, fire districts, poor districts, road districts, and all other minor divisions of government in the United States having power to incur debt reported a net indebtedness of \$3,475,954,353 in 1913. This is an increase of \$1,845,884,743, or 113.2 per cent, over the amount reported for 1902. A small part of this increase is doubtless due to a more complete canvass in the later year. During the period 1890 to 1902 the indebtedness of the minor divisions increased \$704,080,007, or 76 per cent. The per capita debt increased \$15.07, or 72.7 per cent, from 1902 to 1913, and \$5.95, or 40.2 per cent, from 1890 to 1902.

DESCRIPTION OF GENERAL TABLES.

Tables 1 to 7, inclusive, present the indebtedness of counties, cities, villages, townships, precincts, and school districts, together with that of special districts created for such purposes as road and levee construction, drainage, irrigation, fire protection, etc. These tables show the total indebtedness by kind of obligation in 1913, and the total and per capita indebtedness less sinking fund assets in 1913, 1902, and 1890.

The sinking fund assets are almost universally offsets to funded or fixed debt; special assessment loans being usually offset by uncollected special assessments; and revenue loans and outstanding warrants, by cash in the treasury and uncollected revenues. For this reason the net indebtedness corresponds closely to the funded or fixed debt less the sinking fund assets. As here used, however, the term "net debt" signifies the total debt less the sinking fund assets.

The brief statements of the character of the data presented in the several tables are followed by a discussion, by states, of the various classes of indebtedness, and the indebtedness of the different governmental divisions for which debt was reported. This form of presentation gives a better view of the entire subject than can be furnished by presenting the analysis by tables, since the functions and debt-incurring powers of the governmental divisions differ so widely in the different states.

TABLES 1 AND 2.

Indebtedness less sinking fund assets.—Tables 1 and 2 show, by states and by counties, the indebtedness less sinking fund assets of counties, of cities, villages, townships, precincts, etc., and of school districts, at the close of the fiscal year 1913. They also show the total and per capita of the aggregate of such indebtedness at the close of the fiscal years 1913, 1902, and 1890.

The indebtedness of school districts as shown in Tables 1 and 2 does not represent the total indebtedness on account of schools. It comprises only the debt of independent school districts outside of cities, towns, and villages having over 2,500 inhabitants. A complete statement of indebtedness on account of schools would include all obligations incurred for school purposes by counties, cities, towns, and villages, in addition to those incurred by school districts. Because of the difficulties involved, this investigation, however, did not include a classification of indebtedness by purpose of issue, and for this reason it has not been possible to show the entire indebtedness on account of schools. For cities having over 30,000 inhabitants the Bureau of the Census issues an annual report showing in considerable detail their receipts, payments, resources, and liabilities. This report for the year 1912 shows that the 195 cities of the United States, which in that year had a population of over 30,000 each, had a gross indebtedness on account of

school lots and buildings to the amount of \$287,602,110. The bulletin for the year 1913 contains statistics of 199 cities of over 30,000 population, but does not classify their indebtedness by purpose of issue. Their indebtedness on account of schools was doubtless somewhat in excess of the amount quoted above for the 195 cities reported in 1912, and all such indebtedness is included in the column headed "Cities, villages, townships, precincts, etc.," of Tables 1 and 2. No data are at hand on which to base an estimate of the indebtedness on account of schools that was incurred by counties, or by cities, towns, and villages having less than 30,000 inhabitants, but such amounts as were incurred for this purpose are included with other indebtedness of those divisions in the columns headed "Of counties," and "Cities, villages, townships, precincts, etc."

Increase in net indebtedness, total and per capita, and distribution of indebtedness by class of civil division.—Table II, presented on pages 16 and 17, is based upon the data shown in Table 1, and presents, in addition to the data there shown, the amount and per cent of increase of net debt, total and per capita, for each state and geographic division for the years 1913, 1902, and 1890. The information, practically all of which has been shown in the text for the individual states, is presented in tabular form for convenience in making comparisons.

Perhaps the most interesting feature of this table is the per cent of increase in the net indebtedness of all civil divisions, which is shown to have been 113.2 per cent, during the period 1902 to 1913, as compared with an increase of 76 per cent during the period 1890 to 1902. The smallest per cent of increase is shown for the New England division, which reported an actual increase of \$68,874,282, or 30.4 per cent. The largest increase is shown for the Pacific division, which reported an actual increase of \$220,446,527, or 406 per cent. The East North Central and West North Central divisions show an increase of 94.8 and 62.9 per cent, respectively. The South Atlantic division shows an increase of 89 per cent. All other divisions show an increase in excess of 100 per cent, the West South Central division showing an increase of 231.3 per cent, and in this respect ranking second only to the Pacific division.

New Hampshire is the only state which shows a decrease in the amount of the net debt reported, although the District of Columbia, which, however, is classed as a municipality, also shows a decrease. Rhode Island shows an increase of only 0.2 per cent, and from this amount the increases range up to 1,231.6 per cent, shown for Oklahoma. The unusual increase in the latter state is attributable to the fact that but a comparatively few of the civil divisions reported any debt in 1902, and that since that date the state has experienced a phenomenal growth.

PER CAPITA INDEBTEDNESS LESS SINKING FUND ASSETS OF COUNTIES AND OTHER CIVIL DIVISIONS,
BY STATES: 1913, 1902, AND 1890.

The per cent of increase which most nearly approaches the maximum is that shown for California, 813.7. Seven of the nine grand divisions of the United States show a larger per cent of increase from 1902 to 1913 than from 1890 to 1902, and the same condition is true for 33 of the 48 states.

Under the heading "Indebtedness less sinking fund assets classified by divisions by which incurred" in this table is shown that proportion of the total indebtedness of each state which was contracted by each of the three classes of civil divisions: Counties; cities, towns, villages, etc.; and school districts. As shown by the table, the counties of the United States were obligated for 10.7 per cent of the net debt reported; the cities, towns, villages, etc., for 85.9 per cent; and the independent school districts, for 3.4 per cent. While it has been deemed impractical to show comparable figures for this part of the table for each of the states for prior years, similar calculations have been made for the United States as a whole for each year for which such data are available. Beginning with the year 1880, the first year in which similar data were collected, it is found that the county debt was 14.6 per cent of the total; the cities, towns, villages, townships, etc., reported 83.3 per cent; and the school districts, 2.1 per cent. In 1890 the proportion was: Counties, 15.7; cities, towns, villages, etc., 80.4; and independent school districts, 3.9. In 1902 the proportion was 12.1 for counties; 85.1 for cities, towns, villages, etc.; and 2.8 for independent school districts.

Per capita indebtedness.—The diagram on page 13 presents graphically the per capita indebtedness less sinking fund assets of counties and other civil divisions, by states, for the years 1913, 1902, and 1890.

TABLES 3 AND 4.

Total indebtedness of counties.—Tables 3 and 4 present, by states and by counties, the total indebtedness of counties at the close of the fiscal year 1913, classified according to the character of the debt obligations outstanding at that time, the principal classes being (1) funded or fixed and (2) floating and current, the latter being subdivided into three classes: (a) special assessment loans, (b) revenue loans, and (c) warrants.

Sinking fund assets of counties.—The presentation of the total indebtedness shown in the first group of columns of Tables 3 to 7 would be misleading unless accompanied by a statement of the aggregate of the sums of money set apart for the extinguishment of such indebtedness. For this reason the column headed "Sinking fund assets" is presented. These funds, individually, consisted of amounts varying from a

few dollars in cash to large amounts invested in securities.

Indebtedness less sinking fund assets of counties.—The most significant figures relating to indebtedness are those which show the net debt; that is, the total debt less the assets of sinking funds set aside for the extinguishment of debt. Tables 3 and 4 present the indebtedness of counties less their sinking fund assets at the close of the fiscal years 1913, 1902, and 1890.

Total debt of counties, summarized by class of obligation, and sinking fund assets, 1913; and increase in net debt, 1902-1913 and 1890-1902.—Table III, presented on pages 18 and 19, summarizes the indebtedness of the counties of the United States, by states and geographic divisions, and is supplemental to Table 3. The totals for the various classes of debt obligations at the close of 1913 are shown, and in addition to this are shown the net amounts reported by these divisions in the years 1913, 1902, and 1890, and the amount and per cent of increase of the net indebtedness, total and per capita, for these years. The indebtedness of the counties has been discussed at some length in the text for the individual states, and is shown here in a more convenient form for comparison.

While the increase in the indebtedness of the counties during the period 1902 to 1913 has not been so great as the increase in the indebtedness of the cities, towns, villages, etc., they have during the periods 1890-1902, and 1902-1913 maintained their relative proportion of the total indebtedness of all divisions. This table is interesting in that it shows to some extent the varying importance of the county as a civil unit in the different states, and in some cases even where those states are contiguous.

TABLES 5 AND 6.

Indebtedness and sinking fund assets of incorporated places.—Tables 5 and 6 present the total indebtedness and sinking fund assets of incorporated places at the close of the fiscal year 1913, and the total and per capita indebtedness less sinking fund assets at the close of the fiscal years 1913, 1902, and 1890, the classification of debt obligations being the same as in Tables 3 and 4 for county indebtedness as described in the text discussion of those tables.

Total debt of cities, towns, villages, etc., summarized by class of obligation, and sinking fund assets, 1913; and increase in net debt, 1902-1913 and 1890-1902.—Table IV, presented on pages 20 and 21, is a summary, by states and geographic divisions, of the indebtedness of the cities, towns, villages etc., the details of which are shown in Tables 6 and 7. It was prepared for the purpose of affording a means of ready comparison of the debt of such places by states.

The divisions, the debt of which is summarized in this table, reported 87.5 per cent of the indebtedness of all civil divisions.

TABLE 7.

Indebtedness and sinking fund assets of specified civil divisions.—Table 7 presents the total indebted-

ness, sinking fund assets, and indebtedness less sinking fund assets of towns, townships, precincts, and other minor civil divisions for which indebtedness was reported. The data presented are for the year 1913 only, as comparable data for the prior years are not available.

TABLE II.—INCREASE IN NET INDEBTEDNESS OF COUNTIES, CITIES, TOWNS, VILLAGES, TOWNSHIPS, SCHOOL
BY CLASS OF CIVIL

GEOGRAPHIC DIVISION AND STATE.		INDEBTEDNESS LESS SINKING FUND ASSETS.					
		1913			1902		
		Amount.	Increase, 1902-1913.	Per cent of increase, 1902-1913.	Amount.	Increase, 1890-1902.	Per cent of increase, 1890-1902.
1	Total.....	\$3,475,954,353	\$1,845,884,743	113.2	\$1,630,069,610	\$704,080,007	76.0

CLASSES OF INDEBTEDNESS AND GOVERNMENTAL DIVISIONS BY WHICH
INDEBTEDNESS WAS INCURRED.

The following pages present an analysis of the indebtedness of counties, cities, and other civil divisions shown in the tables. The first section, under the caption "Aggregate indebtedness of civil divisions," treats of certain data presented in Tables 1, 3, and 5, while the sections devoted to the different states treat of data shown in Tables 2, 4, 6, and 7.

AGGREGATE INDEBTEDNESS OF CIVIL DIVISIONS.

Table 1 of Part III is an exhibit, by states and geographic divisions, of the aggregate net indebtedness reported by the different classes of civil divisions for the year 1913, and the total for all classes of divisions for the years 1902 and 1890, with the per capita debt for each of the three years 1913, 1902, and 1890. The population is shown for the United States, for the geographic divisions, and for each state. With the exception of the population shown for Kansas, which is the result of a state enumeration made March 1, 1913, the population given is the result of an estimate made as of July 1, 1913.

The aggregate net indebtedness of all civil divisions reporting was \$3,475,954,353. Of this sum, \$371,528,268, or 10.7 per cent, represented obligations for which the counties were liable; the cities, villages, townships, precincts, etc., were obligated for \$2,985,555,484, or 85.9 per cent; and the independent school districts, for \$118,870,601, or 3.4 per cent of the total debt. The net debt reported in 1913 represents an increase of \$1,845,884,743, or 113.2 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net indebtedness of all civil divisions increased \$704,080,007, or 76 per cent. The per capita debt was \$35.81 in 1913, an increase of \$15.07, or 72.7 per cent, since 1902, while during the period 1890 to 1902 the per capita debt increased \$5.95, or 40.2 per cent. Thus, while the net debt increased 113.2 per cent from 1902 to 1913, the per capita debt increased at about two-thirds this rate.

As an indication of the general tendency toward an increased indebtedness it may be remarked that every state, with the exception of New Hampshire and the District of Columbia, showed an increase in the net debt since 1902. The states of New Hampshire, Rhode Island, and New Mexico, and the District of Columbia reported a decrease in the per capita debt, although in Rhode Island and New Mexico this decrease was due to an increase in population rather than to a reduction of the net debt. The state of New York alone reported nearly one-third of the total increase, and also reported the largest per capita debt, \$107.71, no other state having reported a per capita debt in excess of \$100. The per capita debt most nearly approaching this figure, \$70.21, was reported by the state of Washington. New Jersey was third,

with a per capita debt of \$61.66, with Oregon and Massachusetts following in order, with a per capita debt of \$57.86 and \$52.86, respectively. The smallest per capita debt, \$7.58, was reported by Arkansas. Of the geographic divisions the Middle Atlantic division reported both the largest debt and the largest per capita debt. The Mountain division reported the smallest debt, while the smallest per capita debt was reported by the East South Central division.

The gross indebtedness of the counties, not including the indebtedness of any other civil division, as shown in Table 3, was \$393,207,409 in 1913. The funded or fixed debt was \$332,236,161, or 84.5 per cent; special assessment loans, \$17,159,907, or 4.4 per cent; revenue loans, \$38,592,944, or 9.8 per cent; and outstanding warrants, \$5,218,397, or 1.3 per cent. As an offset to the gross debt the counties held an aggregate of \$21,679,141 in sinking fund assets, an amount equal to 5.5 per cent of the gross debt.

Rhode Island was the only state not reporting county debt. This is due to the fact that the counties of that state exist in form only and exercise none of the usual functions of a county organization. Neither Vermont nor Oregon reported any funded or fixed debt for the counties. In Vermont this is due to the fact that the county as an organization performs only a very small part of the functions usually assigned to this division of government, while in Oregon it is due probably to a constitutional provision which prohibits any county in the state from incurring an indebtedness in excess of \$5,000.

Special assessment loans were reported by the counties in only 5 of the 48 states. The largest amount of this class of indebtedness was reported by Minnesota, which showed special assessment loans amounting to \$7,576,245, practically all of which was on account of payments for drainage. The amount shown for New York, \$3,550,000, was reported by Westchester County, and was expended in constructing a system of sanitary sewers, as more fully explained in the discussion of the indebtedness of that state. Aside from the last-mentioned instance, practically the whole amount of indebtedness of this class reported by counties was issued for the construction of drainage ditches.

Every state except New Mexico reported revenue loans, varying in amount from \$3,173,802, reported by Washington, to \$19,702, reported by California. This class of indebtedness includes such amounts as were borrowed in anticipation of the receipt of taxes. In all cases such loans are for only a very short period of time, depending largely upon the date of the close of the fiscal year and the proximity of this date to the date of the receipt of taxes, in several states being only a few weeks, and in none more than a few months.

Outstanding warrants were reported by 38 of the 48 states, and varied in amount from \$1,975,089, reported by the counties of Ohio, to \$621, reported by the counties of Vermont. These warrants, in theory at least, were wholly offset by cash on hand at the close of the fiscal year, and represent only such sums as the county was prepared to pay out on presentation of the warrants. This class of indebtedness, as shown above, forms only a very small proportion of the total debt.

The net indebtedness of all counties was \$371,528,268 in 1913, an increase of \$174,963,649, or 89 per cent, over the amount reported in 1902. The indebtedness in the latter year was larger by \$51,516,574, or 35.5 per cent, than the amount reported in 1890. The per capita debt in 1913 was \$4.33, having increased \$1.53, or 54.6 per cent, over that of 1902. During the period 1890 to 1902 the per capita debt increased only \$0.29, or 11.6 per cent.

The largest county debt, \$34,845,120, was reported by Ohio. New Jersey reported the second largest amount, \$33,809,447, followed in order by Pennsylvania, with \$30,796,465; Texas, with \$27,668,304; and New York, with \$23,310,172. No other state reported a county debt in excess of \$20,000,000. The smallest county debt was reported by Vermont, with a total for all counties of only \$25,931. The latter state also reported the smallest per capita debt, \$0.07, while the largest per capita debt, \$15.49, was reported by Montana, which state reported a net debt of \$6,492,127 for all counties.

A reduction in the amount of the net debt of the counties from 1902 to 1913 was reported by 8 of the 48 states, while 19 reported a reduction in the per capita debt during the period 1902 to 1913. New Hampshire and Massachusetts were the only states in the New England division reporting a reduction in the per capita debt of the counties. In the East North Central division the counties of Indiana reported a material reduction in the per capita debt. In the West North Central division reduction in the per capita debt of the counties was reported by Missouri, North Dakota, South Dakota, Nebraska, and Kansas. In the South Atlantic division West Virginia alone reported a reduction, and in the East South Central division Kentucky was the only state reporting a reduction. In the Mountain division every state except Montana showed a reduction, while in the Pacific division Washington and Oregon reported material reductions in the per capita debt.

The indebtedness of the incorporated places in the United States, including certain other civil divisions, as shown in Table 5, amounted to \$3,563,074,894. The funded or fixed debt amounted to \$3,136,734,703, or 88 per cent; special assessment and revenue loans, \$391,747,748, or 11 per cent; and outstanding warrants, \$34,592,443, or 1 per cent. Offsetting the gross debt were sinking fund assets amounting to \$577,519,410, or 16.2 per cent of the gross debt. The

net debt reported by these divisions in 1913 was \$2,985,555,484, an increase of \$1,598,238,508, or 115.2 per cent, over the amount showed in 1902, while the latter year showed an increase of \$643,077,366, or 86.4 per cent, over the amount reported in 1890.

The net debt of these divisions reported in 1913, as shown above, was 85.9 per cent of the total net debt reported for all divisions and indicates the important position of the municipality in the general scheme of government. As an indication that the amount reported is not beyond a reasonable limit, it is suggested that the sinking funds are applicable for the retirement of the bonded debt only, and that these funds represented 18.4 per cent of the total funded or fixed debt of all places shown in this table. The special assessment debt, for which the owner of the abutting property is liable, was incurred on account of expenditures for improvements, which, in theory at least, have added to the value of the property an amount equal to the cost of the improvement. Revenue loans are retired in less than a year and represent an amount expended in anticipation of taxes already levied. The amount reported as outstanding warrants was entirely covered by cash on hand which was not included as a part of the sinking fund assets. The funded or fixed debt, therefore, is the only debt which may be considered, and, as shown above, there appears to have been ample provision made for its eventual retirement.

For convenience in presentation and for the purpose of easy comparison the cities having a population of 2,500 and over are shown in three groups, those having an estimated population of 30,000 and over in 1913; those having an estimated population of 8,000 to 30,000 in 1913; and those having a population of 2,500 to 8,000 in 1910. All incorporated places having a population of less than 2,500 in 1910 are shown in the last group. The specified classes of civil divisions include townships, precincts, jury wards, and similar minor civil divisions, the details for which are shown in Table 7.

That group of cities having a population of 30,000 or more in 1913 reported an aggregate net debt of \$2,258,958,504, an increase of \$1,193,713,513, or 112.1 per cent, over the amount reported in 1902. During the period 1890 to 1902 places in this class increased their net debt \$525,714,627, or 97.4 per cent. The per capita debt for this group was \$74.82 in 1913, more than double that of either of the other groups. No per capita debt was calculated for these places as a group in prior years. In the group having a population of 8,000 to 30,000 the cities reported a net debt of \$296,794,552, an increase of \$140,328,763, or 89.7 per cent, over the amount reported in 1902, the latter year having shown an increase of \$80,064,870, or 104.8 per cent, over the amount reported in 1890. The per capita debt for this group was \$34.39 in 1913.

The next group, those places having a population of 2,500 to 8,000, reported a net debt of \$223,249,439 in 1913, an increase of \$144,314,307, or 182.8 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net debt of these places increased \$48,736,721, or 161.4 per cent. The per capita debt of the group was \$32.43 in 1913. This group shows a larger percentage of increase in indebtedness from 1902 to 1913 than any other group. This increase is to some extent due to a difference in classification of incorporated places, chiefly in the New England states, where all "towns" having a population of 2,500 and over were included as cities. In 1902 only such of these towns as had a population of 8,000 and over were included as cities.

Those incorporated places having a population of less than 2,500 in 1910 reported a net debt in 1913 amounting to \$105,880,231, an increase of \$59,683,076, or 129.2 per cent, over the amount reported in 1902. During the period 1890 to 1902 places in this class reported a decrease in the net debt amounting to \$6,775,799, or 12.8 per cent. The per capita debt of this group was \$14.17 in 1913.

The details of the reports of the various cities have been discussed by states, and certain comparisons have been made. It may be explained here, however, that in the New England states towns having a population in excess of 2,500 have been included with cities of the same population class, for the reason that in their fiscal operations and in their general functions they more nearly approach those of a city than do the townships, precincts, and similar divisions in other states. This plan was adopted because it was possible to show for these towns such transactions as receipts and payments, which was not practicable for similar civil divisions in other states, and for the reason that the population in these places is largely urban.

The "specified civil divisions," shown in Table 7, reported a gross indebtedness of \$103,068,188 in 1913, of which \$91,815,238, or 89.1 per cent, represented funded or fixed debt; \$9,737,626, or 9.4 per cent, special assessment and revenue loans; and \$1,515,324, or 1.5 per cent, outstanding warrants. Sinking fund assets were reported amounting to \$2,395,430, or 2.3 per cent of the gross debt. Although data of a nature similar to those shown in this table were published in 1902 and 1890, it was found that because of the many necessary changes in classification and in the units empowered to incur debt in the various states the data for these years were not comparable with those for 1913. The total indebtedness for divisions of this class, as published for the years 1902 and 1890, is shown, however, by states, in certain tables.

Only 34 of the 48 states appear in Table 7. From the nature of the divisions shown in this table it will be seen that any attempt at comparison would be futile. Many of the divisions shown were organized to meet conditions peculiar to a particular state, as,

for example, the levee districts in Louisiana, the irrigation districts in the arid and semiarid states of the West, and the drainage districts in the lower Mississippi River valley. Fire and water districts are peculiar to the New England states, while road districts appear in only a few of the Middle Western states. All of these special districts were incorporated by general or special legislative acts, and the data here presented for them were secured largely by correspondence, the total shown for any state being, in all probability, much below the actual indebtedness for places in this class, because of the difficulty in securing a complete list of such places.

The indebtedness reported by the townships in those states where divisions of this class had the power to incur debt may be assumed to be correct. While reports for these places were secured largely by correspondence, the fact that the bureau had a knowledge of the townships existing at the date for which the information was secured and that it was possible to obtain the names and addresses of the officials from whom the information might be secured, permitted a systematic and thorough canvass to be made. In those states where the township assumes a part of the functions ordinarily assumed by the county, the reports were entirely satisfactory. The results secured in Indiana, Illinois, Iowa, Michigan, Missouri, Minnesota, Kansas, and Nebraska were especially satisfactory. Indiana, however, was the only state to report any considerable debt for these divisions, the net debt of all the townships of the state aggregating \$31,498,273, an amount in excess of that reported by divisions of this class in any other state. The greater portion of the proceeds of these debt obligations was expended for improved roads throughout the state, and practically all of the indebtedness reported was in the form of general bonds. The amounts reported by the various classes of divisions have been especially mentioned in the text for the individual states.

The independent school districts reported an aggregate net indebtedness amounting to \$118,870,601 in 1913, an increase of \$72,682,586, or 157.4 per cent, over the amount reported in 1902. It should be explained that the data presented are not strictly comparable with those shown for prior years. For 1902 the school debt was shown separately only for those districts outside of cities or towns having a population of less than 8,000, while for 1913 the school debt is shown only for those independent school districts outside of incorporated places having a population of less than 2,500. In both years that part of the indebtedness on account of schools which was chargeable to places of the size mentioned was included with the debt for such places, no attempt having been made in either year to segregate the school debt from that of the city.

A summary of the indebtedness of all civil divisions of the states, exclusive of school districts, shows a gross indebtedness amounting to \$3,956,282,303 in 1913.

Of this amount, \$3,468,970,864, or 87.7 per cent, represents funded or fixed debt; \$447,500,599, or 11.3 per cent, special assessment and revenue loans; and \$39,810,840, or 1 per cent, outstanding warrants. As an offset to the gross debt the civil divisions reported sinking fund assets amounting to \$599,198,551, or 15.1 per cent of the total debt, leaving a net debt of \$3,357,083,752, to which should be added the debt of independent school districts, \$118,870,601, for which no segregation by class of obligation was obtained, giving a grand total of \$3,475,954,353 for the net debt, for all divisions, and a per capita debt of \$35.81.

ALABAMA.

The total indebtedness less sinking fund assets of Alabama, aside from that which may be classed as purely state liabilities, amounted to \$29,930,124. Of this amount, the counties had incurred \$7,938,919, and the cities, towns, and villages, \$21,991,205. The total funded or fixed debt of the counties amounted to \$7,284,311; revenue loans, to \$563,016; and outstanding warrants, to \$93,911; a per capita net debt of \$3.55. The cities, towns, and villages reported a total bonded debt of \$16,827,292, special assessment and revenue loans of \$5,232,861, and outstanding warrants to the amount of \$151,736, a per capita net debt of \$39.87.

The sinking fund assets represented less than 1 per cent of the total debt, and practically all of these funds were held by the cities, towns, and villages. Of the total amount held, \$124,705 was held by cities of 30,000 or more population. The remainder, except \$2,319 held by counties, was held by cities, towns, and villages with a population of less than 30,000.

Alabama presents no peculiar features in its debt transactions worthy of special mention. The constitution is specific in the enumeration of the districts to which the authority to incur debt is delegated, namely, "counties, cities, towns, and villages," and there is apparently no variation from this list. The amount of revenue loans is comparatively large, possibly because of the fact that express authority is given in the constitution for incurring, under certain limitations, indebtedness of this character. Outstanding warrants represent only a very small proportion of the total debt, the cities having issued the greater portion of these.

Practically all of the data presented for the counties and the larger cities of Alabama were secured by agents of the Census Bureau from county and city records. There are 233 incorporated cities, towns, and villages in Alabama having a population of less than 2,500, according to the census of 1910. Reports for these places were secured by correspondence except for such as were county seats. Reports were received from 200 of these places; 74 of this number reported debt amounting to \$1,486,635, with sinking fund assets of \$81,632, leaving a net indebtedness of \$1,405,003, or

a per capita net debt of \$9.98, basing the per capita on the total population of the places reporting.

Considering the fact that the counties, as a unit, bear practically all of the expenses of highways, schools, and other public improvements and enterprises, the per capita debt of the counties was very low. The per capita debt of these civil divisions in Alabama, however, showed a large percentage of increase over that of former years. In 1890 the per capita debt was \$0.95, increasing to \$2 in 1902, and to \$3.55 in 1913. The total debt less sinking fund assets of counties increased from \$1,433,321 in 1890 to \$3,778,199 in 1902 and to \$7,938,919 in 1913.

The indebtedness less sinking fund assets of incorporated places more than doubled during each census period since 1890, when there was a total of \$5,084,350 as against a total of \$10,587,575 in 1902 and \$21,991,205 in 1913. No comparison of the per capita debt of all municipalities in 1913 can be made with that of prior years for the reason that the per capita was not calculated for 1890 and 1902. To be comparable the per capita debt would have to be calculated on the basis of the population of all places reporting. This information for places with a population of less than 2,500 is not now available. Per capita debt is shown, however, for all those places having more than 2,500 inhabitants for the years 1890, 1902, and 1913, and these generally show a net increase during the 20 years. Birmingham, Mobile, and Selma cities show a variation from the general rule, though in each of these cities the reduction, during the last 10 years at least, was due to an increase in population rather than to a decrease in the indebtedness.

It is interesting to note, also, the gradually increasing per capita debt of the incorporated places for 1913, as shown in Table 6, ranging from \$9.98 for places under 2,500 to \$61.49 for those places having a population of 30,000 or more.

The highest per capita debt shown for the incorporated places in the state, \$93.63, was reported for Montgomery city; the lowest, \$0.80, for the town of Lanett.

Birmingham was the only city of importance reporting any considerable amount of outstanding warrants, showing 62.5 per cent of the total of this class of debt reported by municipalities. This city also reported the largest special assessment debt, the amount, \$1,625,777, being more than one-third of that of all the cities in the state.

ARIZONA.

The total indebtedness less sinking fund assets reported by the civil divisions of Arizona amounted to \$7,323,794 in 1913. Of this amount, \$2,478,410, or 33.8 per cent, had been incurred by the counties; \$4,114,427, or 56.2 per cent, by the cities and villages; and \$730,957, or 10 per cent, by the independent school districts. The amount reported in 1913 was

an increase of \$3,831,293, or 109.7 per cent, over the amount reported in 1902. The per capita debt for all divisions was \$31.73, an increase of \$4.84, or 18 per cent, over the per capita of 1902. During the period 1890 to 1902 the net debt of these divisions increased \$1,311,689, or 60.1 per cent, while the per capita debt during the same period decreased \$9.69, or 26.5 per cent.

The total debt reported by the counties of Arizona was \$2,659,625 in 1913. Of this amount, \$2,532,443, or 95.2 per cent, represented funded or fixed debt; \$20,590, or 0.8 per cent, temporary loans; and \$106,592, or 4 per cent, outstanding warrants. Against this indebtedness the counties held sinking fund assets amounting to \$181,215, or 6.8 per cent of the total debt. The net debt reported in 1913 shows an increase of \$134,889, or 5.8 per cent, over the amount reported in 1902, while the per capita debt during this period showed a decrease of \$7.31, or 40.5 per cent. During the period 1890 to 1902 the counties increased their indebtedness \$389,107, or 19.9 per cent, and decreased their per capita debt \$14.73, or 44.9 per cent. Thus during the period covered in this report the counties increased their net indebtedness \$523,996, or 26.8 per cent, while decreasing the per capita debt by \$22.04, or 67.2 per cent.

Pima County reported the largest net debt, \$600,515, with a per capita debt in 1913 of \$23.59. Eight of the 14 counties reported a reduction of net debt from 1902 to 1913, and every county except Greenlee and Santa Cruz reported a decrease in the per capita debt during that period. Mohave County reported a per capita debt of \$29.66 in 1913, the largest shown, while Navajo County reported the smallest per capita, \$3.65. Because of the changes in the boundaries of Graham and Greenlee Counties the per capita debt for these counties was not calculated, it being impracticable to estimate the population in 1913.

The cities and towns of the state reported a gross indebtedness of \$4,214,842 in 1913. Of this amount, \$4,005,262, or 95 per cent, represented funded or fixed debt; \$188,163, or 4.5 per cent, revenue loans; and \$21,417, or 0.5 per cent, outstanding warrants. These cities held sinking fund assets amounting to \$100,415, or 2.4 per cent of the total debt.

The net debt reported by the cities and towns in 1913 shows an increase of \$3,318,284, or 416.8 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net debt increased \$595,978, or 297.7 per cent. The per capita debt in 1913 was \$47.61.

Phoenix, the largest city in the state, with a population of 16,057, reported the largest net debt, \$1,604,191, an increase of \$1,478,848, or 1,179.8 per cent, over the amount reported in 1902. This city also reported the highest per capita debt, \$99.91.

There were six cities in the group having a population of 2,500 to 8,000 in 1910. These cities reported a net

debt of \$1,317,035 in 1913. Prescott is the only city in this group for which comparable data are shown. This city increased its net debt \$141,252, or 39.8 per cent, from 1902 to 1913, while decreasing the per capita debt \$2.31, or 2.3 per cent, during the same period.

In 1910 there were 13 incorporated places in the state with a population of less than 2,500. Each of these places furnished a report, although but 5 of them reported debt. The net amount reported was \$195,034, an increase of \$45,924, or 30.8 per cent, over the amount reported in 1902. The per capita debt for this group was \$11.89, basing the per capita upon the total population of all places reporting.

The independent school districts of the state reported a net indebtedness of \$730,957 in 1913, an increase of \$378,120, or 107.2 per cent, over that of 1902.

Taking the civil divisions of the state, exclusive of school districts, as a single unit, it will be seen that the gross debt in 1913 was \$6,874,467. Of this amount, \$6,537,705, or 95.1 per cent, represented funded or fixed debt; \$208,753, or 3 per cent, revenue loans; and \$128,009, or 1.9 per cent, outstanding warrants. The sinking fund assets amounted to \$281,630, or 4.1 per cent of the total debt, leaving a net debt, including \$730,957, the debt of the independent school districts, of \$7,323,794, a per capita debt of \$31.73.

ARKANSAS.

The civil divisions of Arkansas reported a total debt less sinking fund assets of \$12,577,033 in 1913. Of this amount, the counties had incurred \$2,877,142, or 22.9 per cent; the cities, towns, villages, etc., \$8,990,203, or 71.5 per cent; and the independent school districts, \$709,688, or 5.6 per cent of the total. During the period from 1902 to 1913 the net debt increased \$9,542,700, or 314.4 per cent. The per capita debt during the same period increased \$5.33, or 236.9 per cent. The increase in the net debt during the period 1890 to 1902 amounted to \$877,306, or 40.7 per cent, while the per capita debt during the same period increased \$0.34, or 17.8 per cent. The total debt of the counties in 1913 amounted to \$2,945,981. Of this amount, \$1,331,661, or 45.2 per cent, represented funded or fixed debt, chiefly general bonds; \$1,275,626, or 43.3 per cent, floating debt or temporary loans; and \$338,694, or 11.5 per cent, outstanding warrants. As an offset to the total debt there were sinking fund assets amounting to \$68,839, or 2.3 per cent of the total debt.

The net debt of the counties in 1913 was \$2,877,142, an increase of \$861,102, or 42.7 per cent, over that in 1902. During the period 1890 to 1902 the net debt increased \$456,543, or 29.3 per cent. From 1902 to 1913 the per capita debt of the counties increased from \$1.49 to \$1.73, or 16.1 per cent; and during the period 1890 to 1902 it increased from \$1.38 to \$1.49, or 8 per cent. The increase in population has more than kept pace with the increasing indebtedness, the

per capita debt indicating that in the counties, at least, the burden of debt was unusually light.

The cities, towns, and villages of Arkansas reported a total debt of \$6,591,266 in 1913. The funded or fixed debt amounted to \$3,231,428, or 49 per cent of the total; special assessment debt combined with revenue loans amounted to \$3,229,521, or 49 per cent; and outstanding warrants and orders amounted to \$130,317, or 2 per cent of the total. Offsetting this debt were sinking funds amounting to \$19,863, or 0.3 per cent of the total debt. The net debt of the incorporated places in 1913 was \$6,571,403, an increase of \$5,561,319, or 550.6 per cent, during the period 1902 to 1913. The increase from 1890 to 1902 was \$430,043, or 74.1 per cent. The per capita debt for all incorporated places in 1913 was \$17.10. Per capitas for prior years were not calculated. A large proportion of the increase of indebtedness in the incorporated places was in Little Rock and Fort Smith, the latter city showing an increase of \$2,231,966 during the period 1902 to 1913, with a per capita debt of \$85.61 in the latter year as against \$2.25 in 1902. Practically every city in the state which reported debt showed a material increase during the period 1902 to 1913. For Camden and Eureka Springs inconsiderable decreases are shown.

There were 277 incorporated places in the state in 1913 which had a population of less than 2,500 in 1910. Of this number, reports were received from 253, and of these, only 54 reported debt. The aggregate debt of these places amounted to \$553,337, with sinking fund assets of \$5,485, leaving a net debt of \$547,852, or a per capita debt of \$3.28, based upon the total population of all places reporting.

The independent school districts of the state reported a total debt of \$709,688. This amount does not by any means represent the entire school debt of the state. As is shown by the note on Table 2, and as has been mentioned in the general text for Part III, the indebtedness for schools is included with other indebtedness for all cities where the population is in excess of 2,500. The data shown in Table 2 are for those districts which are classified as "independent," and which in most, if not all, cases are separate taxing districts.

All of the counties in Arkansas are divided into townships, which, however, do not have the power to incur debt. Absence of specific authority in the constitution probably accounts for this fact, though the words "other municipal corporations" might be broadly construed as delegating such authority to townships. There were a number of organized drainage and levee districts in the state, but as each of these was within a single county, such debt is included as a part of the debt shown on the lines for the respective counties in the column headed "Cities, towns, villages, etc.," in Table 2. The aggregate debt of these separately organized districts was \$2,418,800, as shown in Table 7. This amount was practically one-

fifth (19.2 per cent) of the total debt of the state, and was due largely to the necessity of protecting those counties bordering upon or lying within the limits of occasional inundation of the Mississippi and Arkansas Rivers, the counties of Desha and Poinsett having incurred more than one-half of the indebtedness reported on this account.

Considering the various classes of indebtedness for all civil divisions of the state as a whole, it will be seen that of the entire debt, \$4,563,089 was in the form of general bonds; \$4,505,147 was for special assessment and revenue loans; and \$469,011 was in the form of outstanding warrants. Including the \$709,688 of school district debt and the \$2,418,800 of drainage district debt which was not reported by class of obligation, the total debt of the civil divisions of the state amounted to \$12,665,735, which amount, less sinking fund assets of \$88,702, left a net debt of \$12,577,033, a per capita debt of \$7.58.

CALIFORNIA.

The indebtedness less sinking fund assets reported by the civil divisions of California in 1913 amounted to \$136,528,824. The counties of the state were indebted to the amount of \$12,443,514, or 9.1 per cent of the total for all divisions; the cities, towns, villages, etc., had incurred indebtedness amounting to \$116,500,277, or 85.3 per cent of the total; while the school districts were obligated for \$7,585,033, or 5.6 per cent of the total reported debt. The amount reported in 1913 represents an increase of \$121,585,972, or 813.7 per cent, over the amount reported in 1902. During this period the per capita debt for all divisions increased \$41.47, or 427.1 per cent. During the period 1890 to 1902 the net debt of these divisions increased \$1,895,718, or 14.5 per cent, while during that period the per capita debt decreased \$1.09, or 10.1 per cent.

The total debt reported by all counties of the state, excepting the city and county of San Francisco, which is considered only as a city in this report, amounted to \$12,495,457. Of this amount, \$12,418,348, or 99.4 per cent, represented funded or fixed debt; \$19,702, or 0.2 per cent, revenue loans; and \$57,407, or 0.5 per cent, outstanding warrants. As an offset to the total debt the counties held sinking fund assets amounting to \$51,943, or 0.4 per cent of the total debt. The net debt of the counties reported in 1913 amounted to \$12,443,514, an increase of \$9,662,923, or 347.5 per cent, over the amount reported in 1902. During this period the per capita debt increased \$3.25, or 138.9 per cent. From 1890 to 1902 the net debt of all counties decreased \$2,598,812, or 48.3 per cent, while the per capita debt showed a decrease of \$3.58, or 60.5 per cent. Of the 57 counties considered in this report, 24 reported no debt and several others reported comparatively small amounts. The largest net debt was reported by Los Angeles County, amounting to \$3,534,563 in 1913, as compared with \$260,224 reported

in 1902. This large increase was due to the expense of building permanent highways and bridges. For many of the counties material decreases in the amount of debt are shown, but these are entirely offset and overcome by the large increases in the debt of many others. Three counties reported debt in 1913 which had none in 1902. Seventeen of the counties show increases of more than 100 per cent, several of these increases being in excess of 1,000 per cent. So far as the information at hand indicates, it appears that the greater part of the amount reported was incurred for the purpose of improving county highways, and in some counties, at least, the whole of the indebtedness was incurred for this purpose.

The cities, towns, and villages of California reported a total debt of \$117,500,244 in 1913. Of this amount, \$114,600,942, or 97.5 per cent, represented funded or fixed debt, almost wholly in the form of general bonds; \$262,416, or 0.2 per cent, was to be paid from special assessments; and \$2,594,278, or 2.2 per cent, was in the form of outstanding warrants. These cities, towns, and villages held sinking fund assets amounting to \$3,533,057, or 3 per cent of the total debt. The net debt reported in 1913 was \$113,967,187, an increase of \$103,473,633, or 986 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net debt increased \$5,497,775, or 110 per cent. The per capita debt in 1913 was \$62.40. No such calculations have been made for prior years. That group composed of cities having a population of 30,000 or more reported by far the largest portion of the debt of all cities. The net debt for these places amounted to \$90,257,104, an increase of \$84,135,119, or 1,374.3 per cent. In this group of cities is Los Angeles, with a net debt of \$37,881,494, and San Francisco, with a net debt of \$34,896,447. The last-mentioned city reports what is probably the highest rate of increase for any city of importance in the United States, 5,669.4 per cent, due to the necessity for rebuilding and repairs in practically every branch of the municipal organization after the earthquake and fire of 1906. The net debt of Los Angeles in 1913 showed an increase of \$34,544,431, or 1,035.2 per cent, over the amount reported in 1902. Nearly two-thirds of this increase was incurred for the improvement of the city water system. Each city in this group showed a material increase in the amount of net debt, though no others approach the two mentioned above.

In the group composed of cities with a population of 8,000 to 30,000 the largest debt is shown for Long Beach and Riverside cities, each reporting debt of over one and one-half million dollars. Fresno, the largest city in this group, reported an indebtedness of less than \$500,000.

At the census of 1910 there were 128 incorporated places in the state with a population of less than 2,500.

Reports were secured from 116 of this number, and of those reporting, 87 showed a net debt of \$4,710,010, an increase of \$4,087,469, or 656.6 per cent, over the amount reported in 1902. This appears to be a very large increase, but when it is considered that reports for only 21 cities of this class were published for 1902, it would seem that reports for that year were incomplete.

The "specified civil divisions" of California, shown in Table 7, include townships, irrigation, levee, and drainage districts, sanitary districts, and sewer construction districts. These districts combined reported a net debt of \$2,533,090. The data shown for these divisions for 1913 are not set forth as presenting a complete statement of the debt of the divisions of this class. There are no doubt a number of districts falling in the class here considered which were not discovered by the Census Bureau because of the limited time that could be devoted to an inquiry of this nature. The data published are the results of careful inquiry by agents in each county, and, so far as the places or divisions are reported, may be accepted as accurate. The data for irrigation districts were not shown for 1902 because of some question as to the legality of the obligations issued.

The school districts of the state reported a total debt of \$7,585,033 in 1913, an increase of \$5,916,326, or 354.5 per cent, over the amount reported in 1902. The amount shown does not include the debt on account of schools contracted by cities having a population in excess of 2,500.

Considering all the civil divisions of the state (except school districts, for which no segregation of the indebtedness was made, and which indebtedness is assumed to be net) as a single unit, it will be seen that the total debt amounted to \$132,565,961 in 1913. Of this amount, \$129,578,163, or 97.7 per cent, represented funded or fixed debt; \$328,091, or 0.2 per cent, special assessment and revenue loans; and \$2,659,707, or 2 per cent, outstanding warrants. Against the total debt all divisions held sinking fund assets amounting to \$3,622,170, or 2.7 per cent of the total debt, leaving a net debt of \$136,528,824 including the debt of school districts.

COLORADO.

The total indebtedness less sinking fund assets reported by the civil divisions of Colorado amounted to \$36,473,364 in 1913. Of this amount, the counties were obligated for \$5,583,801, or 15.3 per cent; the cities, towns, villages, etc., for \$27,544,353, or 75.5 per cent; and the school districts for \$3,345,210, or 9.2 per cent. The net debt reported in 1913 represents an increase of \$18,204,040, or 99.6 per cent, over the amount reported in 1902. The per capita debt increased \$8.95, or 27.7 per cent, during this period. During the period 1890 to 1902 the net debt of all

divisions increased \$10,458,148, or 133.9 per cent, while the per capita debt increased \$13.39, or 70.7 per cent.

The counties of Colorado reported a total debt of \$5,634,390 in 1913. Of this amount, \$4,267,715, or 75.7 per cent, represented funded or fixed debt; \$1,218,494, or 21.6 per cent, revenue loans; and \$148,181, or 2.6 per cent, outstanding warrants. Against this total debt the counties held sinking fund assets amounting to \$50,589, or 0.9 per cent, of the total debt.

The net debt reported for all counties was \$5,583,801 in 1913, a decrease of \$287,388, or 4.9 per cent, from the amount reported in 1902. During this period the per capita debt decreased \$1.74, or 16.7 per cent. During the period 1890 to 1902 the net debt increased \$1,269,601, or 27.6 per cent, although the per capita debt for this period shows a slight decrease, \$0.77, or 6.9 per cent.

A number of the counties reported a reduction in the amount of debt, although in most cases the reduction was comparatively small. The indebtedness of many of the individual counties is large because of the fact that the county is the smallest debt-bearing unit aside from the cities, towns, and villages, or some specially organized districts, such as irrigation districts, which are not common to all counties. Custer, Fremont, Kiowa, Park, and Sedgwick were the only counties to report no debt, although a number reported only a small amount of temporary loans or warrants outstanding. The temporary loans form a much larger proportion of the total debt than in most states, while no debt to be paid from special assessments was reported. Because of the changes in the boundaries of several counties, and the organization of new counties, the data presented for 1913 for such counties are not strictly comparable with those for prior years, although for the state as a whole the facts presented show the general tendency.

The cities, towns, and villages, as indicated above, reported the greater portion of the debt of all civil divisions. The total debt of these divisions was \$28,224,085, of which \$16,245,735, or 57.6 per cent, represented funded or fixed debt; \$10,843,684, or 38.4 per cent, special assessment debt and temporary loans; and \$1,134,666, or 4 per cent, outstanding warrants. As an offset to the total debt these places reported sinking fund assets amounting to \$936,904, or 3.3 per cent of the total debt. The net debt reported in 1913 was \$27,287,181, an increase of \$16,090,239, or 143.7 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net debt of these places increased \$8,240,980, or 278.8 per cent. The per capita debt was \$51.07 in 1913. No such calculations have been made for prior years.

The group of cities having a population of more than 30,000 is comprised of Colorado Springs, Denver, and

Pueblo. Of these, Denver is the largest and reported much the largest debt as well as the greatest increase in indebtedness. During the period 1902 to 1913 the debt of this city increased from \$3,763,682 to \$9,279,194, or 146.5 per cent, while the per capita debt during the same period increased \$11.55, or 42.1 per cent. Both Colorado Springs and Pueblo reported material increases in both net and per capita debt.

Of the four cities in the group having a population of 8,000 to 30,000, Trinidad reported the largest debt, both net and per capita, while the largest percentage of increase was reported by Greeley, the smallest city in the group.

Three cities—Cripple Creek, Florence, and Leadville—in the group having a population of 2,500 to 8,000 in 1910, reported a decrease in net debt. All the others reported material increases. Cripple Creek, Durango, and Loveland show a decrease in the per capita debt. Cities in this group reported the highest per capita debt.

There were 174 incorporated places in Colorado with a population in 1910 of less than 2,500. Reports were secured by correspondence from 168 of these places, and of this number, 113 reported a net debt of \$3,802,950, an increase of \$2,639,737, or 226.9 per cent, over the amount reported in 1902.

The "specified civil divisions" shown in Tables 5 and 7 are specially incorporated irrigation districts. These districts, or such as the bureau was able to secure reports from, reported a total debt of \$257,172, of which \$250,000 was general bonds and \$7,172 outstanding warrants. No population was reported for such districts from which the per capita debt might be calculated.

The school districts of the state reported a net debt of \$3,345,210 in 1913, an increase of \$2,144,227, or 178.5 per cent, over the amount reported in 1902. The amount of debt reported for school districts includes only such debt as was reported by independent districts, and does not include the debt on account of schools in cities having a population of more than 2,500.

Considering all the civil divisions of the state, excepting school districts, as a single unit, it will be seen that the total debt amounted to \$34,115,647, of which \$20,763,450, or 60.9 per cent, represented funded or fixed debt; \$9,221,399, or 27 per cent, special assessment loans; \$2,840,779, or 8.3 per cent, revenue loans; and \$1,290,019, or 3.8 per cent, outstanding warrants. Offsetting this debt were sinking fund assets amounting to \$987,493, or 2.9 per cent of the total debt.

CONNECTICUT.

The total debt less sinking fund assets reported by all the civil divisions of Connecticut amounted to \$44,925,382 in 1913. In total indebtedness Connecti-

cut ranks second to Massachusetts among the New England states, though in per capita debt it ranks third, following Massachusetts and Rhode Island. Of the amount reported, the counties had incurred \$964,517, or 2.1 per cent; the remainder, \$43,960,865, or 97.9 per cent, was incurred by the cities and towns, towns in this case being the division common to all New England states.

The net debt reported for all civil divisions in 1913 represents an increase of \$14,715,511, or 48.7 per cent, over the amount reported in 1902. The per capita debt during this period increased \$5.90, or 18 per cent. During the period 1890 to 1902 the net debt of all divisions increased \$10,246,593, or 51.3 per cent, while during the same period the per capita debt increased \$5.36, or 20 per cent.

The total indebtedness reported by the counties of Connecticut amounted to \$974,072 in 1913. Of this amount, \$145,000, or 14.9 per cent, represented funded or fixed debt; \$828,325, or 85 per cent, revenue loans; and \$747, or less than 0.1 per cent, outstanding warrants.

As an offset to the debt reported, the counties held sinking fund assets amounting to \$9,555, or 1 per cent of the total debt. The net debt reported in 1913 represented an increase of \$527,517, or 120.7 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net debt of the counties increased \$406,453, or 1,330.6 per cent. The per capita debt in 1913 was \$0.82, an increase of \$0.36, or 78.3 per cent, over the amount reported in 1902. During the period 1890 to 1902 the per capita debt increased from \$0.04 to \$0.46, or at about the same rate as the increase in net debt.

The cities and towns of Connecticut, as mentioned above, have incurred practically the whole of the indebtedness of the civil divisions within the state. The total debt contracted by these divisions amounted to \$45,828,028 in 1913. Of this amount, \$39,008,356, or 85.1 per cent, represented funded or fixed debt; \$6,619,102, or 14.5 per cent, revenue loans; and \$200,570, or 0.4 per cent, outstanding warrants. Against this debt the cities and towns held sinking fund assets available for the redemption of debt amounting to \$4,069,463, or 8.9 per cent of the total debt. The net debt reported in 1913 was \$41,758,565, an increase of \$16,053,869, or 62.5 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net debt of these places increased \$5,139,085, or 66.3 per cent. The per capita debt for 1913 for all places was \$39.03. No figures for per capita indebtedness are available for these places, by groups, for prior years.

Considering the various classes of cities and towns by groups, according to their population, it will be noted that those cities having a population in excess of 30,000 reported the largest debt. No towns are

included in this group, although Meriden and Stamford each has a population in excess of 30,000. The net debt for these cities showed an increase of \$6,048,219, or 46.9 per cent, from 1902 to 1913. During the period 1890 to 1902 this group of cities reported an increase of \$5,139,085, or 66.3 per cent. Of the individual cities comprising this group, Hartford reported the largest debt, closely followed by New Haven, the largest city in the state. All these cities show a material increase in the amount of debt, the largest percentage of increase, 179.8 per cent, being shown for New Britain, and the smallest, 3.8 per cent, for Bridgeport. Two cities of this group—Bridgeport and New Haven—show a reduction in the per capita debt from 1902 to 1913. All the others show material increases.

The cities, towns, and boroughs which make up the group having from 8,000 to 30,000 population reported a net debt amounting to \$15,531,814 in 1913, including the debt of the towns of Meriden and Stamford. The amount reported represents an increase of \$7,121,675, or 84.7 per cent, over the amount reported in 1902, and gives a per capita debt of \$41.33 for the group. Norwich city, with a net debt of \$1,863,781, was the largest individual debtor of the group, and had the largest per capita debt, \$89.45. Several of the cities and towns reported decreases both in the net and per capita debt.

The next group, which comprises the incorporated places having from 2,500 to 8,000 inhabitants in 1910, was composed largely of towns and reported a net debt of \$6,828,970, and a per capita debt of \$35.23. The amount reported represents an increase of \$2,521,272, or 58.5 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net debt increased \$2,071,338, or 92.6 per cent. While in general, as indicated by the increase in the total, the cities and towns in this group show material increases, several of them in excess of 100 per cent, yet 14 towns show decreases.

The next group, made up of places having a population of less than 2,500 according to the census of 1910, includes only cities and villages, as distinguished from "towns" falling in this group. These places (cities and villages) are comparatively few in Connecticut, and reported a net debt in 1913 of only \$458,983, with a per capita debt of \$38.86. In 1902 these places reported a net debt of \$96,280, and in 1890 a net debt of only \$39,500. It is doubtful if these figures are strictly comparable, the rate of increase from 1902 to 1913, 376.7 per cent, being particularly questionable. It is more than probable that the figures for the years prior to 1913 do not accurately represent the debt for the years shown.

The "specified civil divisions" include only towns having a population of less than 2,500. These places reported a net debt of \$2,202,300 in 1913. No comparable data for prior years are available.

Considering all the civil divisions of the state as a single unit, it will be seen that the total debt reported in 1913 amounted to \$49,047,513. Of this amount, \$39,858,018, or 81.3 per cent, was funded or fixed debt; \$8,988,178, or 18.3 per cent, was in the nature of revenue loans, largely loans in anticipation of taxes, a common form of debt in the New England states; and \$201,317, or 0.4 per cent, was in the form of outstanding warrants. Against this debt the several divisions of the state held sinking fund assets amounting to \$4,122,131, or 8.4 per cent of the total debt.

DELAWARE.

The total debt less sinking fund assets of all civil divisions in the state of Delaware amounted to \$6,097,324 in 1913. Of this amount, the counties had incurred \$1,389,283, or 22.8 per cent of the total debt; \$4,665,436, or 76.5 per cent, was incurred by the cities, towns, and villages; and \$42,605, or 0.7 per cent, was the debt of the independent school districts.

The net debt of all civil divisions represents an increase of \$2,714,782, or 80.3 per cent, over the debt reported in 1902. The per capita debt increased \$11.32, or 62.9 per cent, during this period. During the period 1890 to 1902 the net debt increased \$1,351,031, or 66.5 per cent, while during the same period the per capita debt increased \$5.93, or 49.2 per cent.

The counties of Delaware reported a total debt of \$1,389,283 in 1913. Of this amount, \$1,327,000, or 95.5 per cent, was in the form of general bonds, and \$62,283, or 4.5 per cent, was in the form of revenue loans. No debt to be paid from special assessments was reported, nor were there any outstanding warrants. No sinking fund assets were reported by the counties. The net debt reported in 1913 represents an increase of \$598,341, or 75.6 per cent, over the amount reported in 1902, the per capita debt increasing \$2.47, or 58.7 per cent, during this period. The increase in the net debt amounted to only \$172,542, or 27.9 per cent, during the period 1890 to 1902; while the per capita debt increased \$0.54, or 14.7 per cent, during the same period.

New Castle County reported a funded or fixed debt of \$1,183,000, or 89.1 per cent of such debt of the counties of the state. Wilmington, the only city in the state with a population in excess of 30,000, is located in this county.

The cities, towns, and villages of Delaware reported a total debt of \$4,670,920. Of this amount, \$4,525,436, or 96.9 per cent, represented funded or fixed debt; \$53,588, or 1.1 per cent, revenue loans; and \$91,896, or 2 per cent, outstanding warrants. As an offset to this debt the cities, towns, and villages reported sinking funds amounting to \$5,484.

The net debt of all incorporated places increased \$2,094,811, or 81.5 per cent, during the period 1902 to

1913. During the period 1890 to 1902 the net debt increased \$1,157,514, or 81.9 per cent. The per capita debt reported in 1913 was \$37.12. No per capita indebtedness has been calculated for these places as a unit for prior years. The city of Wilmington reported a net debt of \$4,112,777 in 1913, which amount was 88.2 per cent of the debt of all incorporated places in the state. All those cities having a population of 2,500 or more reported material increases in debt, though in no city aside from Wilmington did the total debt amount to \$150,000. There were 42 cities, towns, and villages in the state with a population of less than 2,500. Reports were received from 39 of these places, 19 of which reported debt amounting to \$311,346, a per capita debt of \$12.42, basing the per capita on the total population of all places reporting.

The independent school districts of the state reported a total debt of \$42,605 in 1913. In 1902 these districts reported an indebtedness of only \$2,475. It is very doubtful whether this last amount represents the total debt on account of schools at that time.

The "hundreds" of Delaware are, according to the constitution, separate taxing districts and have the authority to incur debt. It was ascertained, however, that none of these districts was bonded and that the debt, if any, consisted of only small amounts of warrants outstanding. An indebtedness of \$18,500 for these districts was reported in 1902, but this appears to have been retired since that date.

Considering all the civil divisions of the state, other than independent school districts, as a single unit, it is noted that the total debt of \$6,060,203 is made up of bonds to the amount of \$5,852,436, or 96.6 per cent; temporary loans amounting to \$115,871, or 1.9 per cent; and outstanding warrants amounting to \$91,896, or 1.5 per cent. The sinking fund assets amounted to only \$5,484, or less than 0.1 per cent of the total debt.

DISTRICT OF COLUMBIA.

The District of Columbia is a single division, coextensive with the city of Washington, and, as is generally known, has an unusual form of government. The executive functions are administered by three commissioners appointed by the President and confirmed by the Senate, and the legislative functions are performed by the Congress of the United States. Practically one-half of the costs of government and of the amounts required for the reduction of the indebtedness of the District of Columbia are appropriated from the National Treasury.

The gross debt reported in 1913 was \$9,061,651, of which \$7,610,850, or 84 per cent, was funded or fixed and \$1,450,801, or 16 per cent, was in the form of revenue loans. Sinking fund assets amounting to \$828 were shown, leaving a net debt of \$9,060,823. This amount represents a decrease of \$5,479,368, or 37.7 per cent, from the amount reported in 1902. During the

period 1890 to 1902 the net debt showed a decrease of \$5,240,859, or 26.5 per cent. The per capita debt was \$26.03 in 1913, having decreased \$24.39, or 48.4 per cent, from 1902 to 1913, while the indebtedness in 1902 showed a decrease of \$35.44, or 41.3 per cent, from the amount reported in 1890.

No special assessment debts nor outstanding warrants were reported.

FLORIDA.

The total debt less sinking fund assets reported for all civil divisions in Florida amounted to \$17,804,955, a per capita debt of \$21.96. Of this amount, the counties of the state reported \$7,170,896, or 40.3 per cent of the total; the cities, towns, and villages reported \$10,406,287, or 58.4 per cent; and the school districts, \$227,772, or 1.3 per cent.

During the period 1902 to 1913 the net debt of the civil divisions of the state increased \$13,590,649, or 322.5 per cent, and the per capita debt during the period increased \$14.44, or 192 per cent. During the period 1890 to 1902 the total net debt increased \$3,069,600, or 268.2 per cent, while the per capita debt increased \$4.60, or 157.5 per cent.

The total debt of the counties in 1913 was \$7,267,902. Of this amount, \$4,036,770, or 55.5 per cent, represented funded or fixed debt, chiefly general bonds; \$3,125,909, or 43 per cent, revenue loans; and \$105,223, or 1.4 per cent, outstanding warrants. No special assessment debt was included in the total indebtedness of the counties, possibly because of a lack of specific constitutional authority to incur such indebtedness.

As an offset to the total debt the counties held sinking fund assets amounting to \$97,006, or 1.3 per cent of the total debt.

The net debt of the counties increased \$6,345,863, or 769.2 per cent, during the period 1902 to 1913, while during the period 1890 to 1902 the increase was \$490,375, or 146.5 per cent. The increases in the per capita debt during the same periods were \$7.37, or 501.4 per cent, and \$0.62, or 72.9 per cent, respectively.

During the past decade Florida has increased 47.4 per cent in population and has made very substantial progress in all directions. Farm values increased 165.5 per cent during the period 1900 to 1910, and many of the counties showed increases greatly in excess of this figure. The permanent improvements in these counties in the way of good roads, new bridges, drainage, additional and more modern school facilities, new county buildings, etc., naturally have kept pace with the growth in other directions, and this undoubtedly accounts for the large increase in the debt of the counties. It is only fair to assume that such improvements as have been made are actually in advance of the growth in population and resources. The fact that the county is the smallest unit, aside from cities, towns,

and villages, by which indebtedness may be incurred, should be considered in comparing the county debt of this state with that of other states in which such civil divisions as townships, road and drainage districts, and other specially incorporated districts bear a very considerable portion of what would otherwise be borne by the counties.

The total indebtedness of the cities, towns, and villages, considered as a separate class of units, amounted to \$10,704,005. Of this amount, \$9,282,976, or 86.7 per cent, was in the form of funded or fixed obligations; \$1,261,191, or 11.8 per cent, represented special assessment and revenue loans; and \$159,838, or 1.5 per cent, was in the form of outstanding warrants. This debt was offset by sinking funds amounting to \$297,718, or 2.8 per cent of the total debt.

The net debt of cities, towns, and villages showed an increase of \$7,017,014, or 207 per cent, during the period 1902 to 1913; while the increase from 1890 to 1902 was \$2,579,225, or 318.4 per cent. The amounts of per capita debt for these periods were not calculated separately. The cities having a population of 2,500 to 8,000 reported an increase in their net indebtedness amounting to \$2,503,763, or 450.8 per cent, over that of 1902. The increase in the indebtedness of these municipalities is due in general to the improvement of streets and the construction of sanitary sewers, wharves, docks, etc., in those cities of the state which have in recent years become popular as winter resorts.

Those cities, towns, and villages having a population of less than 2,500 reported a total debt less sinking fund assets of \$1,083,178, an increase of 667.3 per cent during the period 1902 to 1913. There were 125 incorporated places in this class, 109 of which reported, and of this number 44 reported debt. The per capita debt for municipalities of this class was \$14.23, based upon the population of all places reporting. Undoubtedly the reason assigned above for the increase of the debt of municipalities having over 2,500 inhabitants applies to the places considered here, since practically all of the places showing an increased debt are within the resort districts.

The item of \$227,772 shown as the indebtedness of school districts, it should be explained, was the debt of only those subdistricts organized and conducted separately from the usual county organization. These districts appear in 31 of the 48 counties, the total indebtedness in any one of them being comparatively small. The schools in general are a part of the county organization, and the financial transactions can not be readily separated from those of the county.

The total gross debt of all civil divisions in 1913, except that of independent school districts, was reported as \$17,971,907. Of this amount, \$13,319,746, or 74.1 per cent, represented funded or fixed debt, chiefly in the form of general bonds; \$481,896, or 2.7

per cent, special assessment loans; \$3,905,204, or 21.7 per cent, revenue loans; and \$265,061, or 1.5 per cent, outstanding warrants. As an offset to this debt there were sinking fund assets amounting to \$394,724, or 2.2 per cent of the gross debt.

GEORGIA.

The civil divisions of Georgia, including counties, cities, towns, villages, and school districts, reported a total debt less sinking fund assets of \$25,613,855 in 1913. The counties of the state had incurred \$2,724,561, or 10.7 per cent of the total debt; the cities, towns, and villages were indebted to the amount of \$22,675,208, or 88.5 per cent; and the independent school districts reported \$214,086, or 0.8 per cent of the total. The amount reported represents an increase of \$12,204,326, or 91 per cent, over the amount reported in 1902. The per capita debt during the period 1902 to 1913 increased \$3.51, or 60 per cent. During the period 1890 to 1902 the indebtedness increased \$3,586,976, or 36.5 per cent, and during the same period the per capita debt increased \$0.50, or 9.3 per cent.

It will be noted that no indebtedness to be paid from special assessments was reported by the civil divisions of the state. Although the constitution does not expressly prohibit the levying of assessments, it appears that the section requiring that "All taxation shall be uniform upon the same class of subjects and ad valorem on all property subject to be taxed" has been interpreted to be a prohibition. Several of the small cities reported debt of this class, but this was undoubtedly due to error in interpreting the schedule used.

The gross debt of all counties in Georgia amounted to \$2,785,068 in 1913. The funded or fixed debt, chiefly general bonds, amounted to \$2,069,373, or 74.3 per cent of the total; and revenue loans amounted to \$715,695, or 25.7 per cent, of the total debt. Offsetting this debt the counties held sinking fund assets amounting to \$60,507, or 2.2 per cent of the total debt.

The counties reported a net debt of \$2,724,561 in 1913, an increase of \$1,693,345, or 164.2 per cent, over the amount reported in 1902. During this period the per capita debt increased \$0.55, or 122.2 per cent. During the period 1890 to 1902 the net debt increased \$601,836, or 140.2 per cent, while during the same period the per capita debt increased \$0.22, or 95.6 per cent.

The per capita debt of the counties of Georgia, \$1, is the lowest reported in the South Atlantic division, although Delaware and West Virginia each reported a smaller net indebtedness. These states, however, because of the difference in area and population, may not be compared with Georgia. In 1902 only 65 counties, out of a total of 137, reported debt. The number re-

porting debt in 1913 increased to 90, while the number of counties increased to 146. These figures have no direct bearing upon the indebtedness of these divisions except to show the generally increasing tendency to assume indebtedness for the purpose of improving local conditions. Practically the whole of the increase in debt was in the form of bonds, which would indicate considerable outlays for permanent improvements. This assumption is borne out by an investigation of those returns in counties which reported a material increase in bonded debt. The greater portion of new debt has been incurred for the purpose of building hard roads, for drainage, and for new court-houses and other public buildings. A number of the counties show a very material reduction of debt since 1902.

The total debt reported by the cities, towns, and villages of Georgia amounted to \$24,507,532 in 1913. The bonded debt was \$23,173,846, or 94.6 per cent; revenue loans amounted to \$1,203,271, or 4.9 per cent; and outstanding warrants amounted to \$130,415, or 0.5 per cent of the total debt. The sinking fund assets held by the cities, towns, and villages amounted to \$1,832,324, or 7.5 per cent of the total debt.

Atlanta, the largest city in the state, reported the largest debt. It also reported a very material increase, 69 per cent, over the amount reported in 1902. The greatest increase among the other more important cities was reported by Macon, which reported an increase of \$687,861, or 96.6 per cent, during the period 1902 to 1913. Savannah was the only city of importance to report a decrease in the amount of debt, such decrease amounting to 6.9 per cent, while the per capita decreased 12.5 per cent. Since 1890 the per capita debt of Savannah has decreased 46.2 per cent, a very unusual showing for a city of this size.

Among those cities ranging in population from 2,500 to 30,000, there has been a general increase in the net debt, Sandersville reporting the only decrease. The greatest percentage of increase, however, is shown by those cities, towns, and villages having a population of less than 2,500. There were 516 places of this class in the state in 1910. Reports were received from 436, and of this number, 150 reported debt in 1913 amounting to \$3,578,245, an increase of \$2,992,002, or 510.4 per cent, since 1902. It is doubtful, however, if such comparison should be made with the data reported in 1902, for the reason that only 62 places of the class here considered were reported in that year. Allowing for a reasonable increase in the number of places falling within this class and for deductions because of others where the population has increased to over 2,500, there would still appear to be a very material increase in the debt of these small cities. The amounts reported by the individual places would indicate expenditures for permanent improvements, such as waterworks, lighting systems, and improved

streets. Many of the schedules, in fact, carried remarks to the effect that the bonded debt reported was issued for the purpose mentioned.

The school district debt reported was \$214,086. This amount does not represent the debt of the schools of Georgia, nor does it even approximate the total debt for schools. As is the case in all of the Southern states, the schools can not be considered as a separate division in Georgia. In many of the counties the schools are wholly dependent upon the other civil divisions, and in none of the counties are they wholly independent. The debt reported, therefore, is for those districts which are wholly independent, and does not include the indebtedness of either cities or counties on account of schools.

There were no separate taxing districts in the state aside from those mentioned above.

Considering the various classes of indebtedness for all divisions of the state, excepting school districts, the debt of which has not been classified, it will be seen that of the total debt, \$27,292,600, general bonds amounted to \$25,243,219, or 92.5 per cent; temporary loans, to \$1,918,966, or 7 per cent; and outstanding warrants, to \$130,415, or 0.5 per cent of the total debt. As an offset to this debt, all civil divisions reported a total in sinking fund assets amounting to \$1,892,831, or 6.9 per cent of the total debt.

IDAHO.

The total debt less sinking fund assets of the civil divisions of Idaho was \$11,987,079 in 1913. Of this indebtedness, the counties were responsible for \$3,321,426, or 27.7 per cent; the cities, towns, and villages for \$6,339,296, or 52.9 per cent; and the school districts for \$2,326,357, or 19.4 per cent. The net debt reported in 1913 was an increase of \$8,427,430, or 236.7 per cent, over the amount reported in 1902, while the latter year showed an increase of \$2,183,809, or 158.7 per cent, over the amount reported in 1890. The per capita debt in 1913 was \$31.64, an increase of \$11.46, or 56.8 per cent, over that of 1902. During the period 1890 to 1902 the per capita debt increased \$3.88, or 23.8 per cent.

The counties of Idaho reported a total debt of \$3,388,849, of which \$2,163,659, or 63.8 per cent, represented funded or fixed debt; and \$1,225,190, or 36.2 per cent, revenue loans. No outstanding warrants were reported. Sinking fund assets to the amount of \$67,423, or 2 per cent of the total debt, were held by the counties. The net debt of the counties was \$3,321,426, an increase of \$903,088, or 37.3 per cent, over the amount reported in 1902, while the latter year showed an increase of \$1,183,351, or 95.8 per cent, over the amount reported in 1890. The per capita debt during the period covered by this bulletin shows a considerable decrease, particularly for the period 1902 to 1913, during which the decrease

per capita amounted to \$4.94, or 36 per cent. During the period 1890 to 1902 the per capita debt decreased \$0.93, or 6.4 per cent.

Because of the numerous changes made in the county boundaries in recent years, the data presented in this bulletin are not comparable in many cases with those shown for prior years. Assuming, however, that the new counties formed have reported their proportion of the debt of the original county, the per capita debt, where shown, is fairly comparable.

The total debt reported by the cities, towns, and villages of Idaho was \$6,163,731 in 1913. Of this amount, \$4,274,456, or 69.3 per cent, represented funded or fixed debt; \$1,127,927, or 18.3 per cent, special assessment loans; \$631,827, or 10.3 per cent, revenue loans; and \$129,521, or 2.1 per cent, outstanding warrants. The sinking funds held by these cities amounted to \$189,435, or 3.1 per cent of the total debt.

The net debt reported by all incorporated places was \$5,974,296 in 1913, an increase of \$5,315,632 over the amount reported in 1902. The debt reported in 1890 was that of a single city, Boise, and amounted to only \$29,211.

There were no cities in the state with a population of 30,000 or more in 1913. The largest, Boise, with 27,534 inhabitants, and the next largest, Pocatello, with 10,754 inhabitants, reported a net debt of \$1,200,827, or \$43.61 per capita, and \$371,533, or \$34.55 per capita, respectively.

There were 10 cities in the group having a population of 2,500 to 8,000. Of these, Lewiston, with a net debt of \$647,960, and Twin Falls, with a net debt of \$596,450, were the principal debtors. The former city reported a per capita debt of \$107.22, and the latter, a per capita debt of \$113.44, the largest in the state. The city of Wallace reported the smallest per capita debt among the cities having a population of 2,500 or more.

Of the 43 incorporated places in the state with a population of less than 2,500, 29 reported an indebtedness aggregating \$1,090,000, or a per capita debt of \$18.92, in 1913. In 1902 the 11 places in this class reported a total debt of \$4,404.

The school district debt reported in 1913 amounted to \$2,326,357, an increase of \$1,843,710 over the amount reported in 1902. This amount, however, does not represent the total indebtedness on account of schools. As mentioned in the note on Table 2, the indebtedness for schools of those cities having a population of 2,500 or more is included with the other debt of these cities.

The data shown in Table 7 for Idaho are those for irrigation districts, which reported a net debt of \$365,000, all general bonds.

No classification of the debt of school districts was made. The remaining civil divisions of Idaho re-

ported a gross debt of \$9,917,580, of which \$6,803,115, or 68.6 per cent, represented funded or fixed debt, chiefly in the form of general bonds; \$1,127,927, or 11.4 per cent, special assessments; \$1,857,017, or 18.7 per cent, revenue loans; and \$129,521, or 1.3 per cent, outstanding warrants. The sinking funds amounted to \$256,858, or 2.6 per cent of the gross debt, leaving a net debt of \$11,987,079, or \$31.64 per capita, including \$2,326,357 of independent school district debt, for which no segregation as to class of indebtedness was made, and which is assumed to be net.

ILLINOIS.

The civil divisions of Illinois, though ranking third in total population, rank sixth in net debt reported in 1913. The net debt reported was \$137,207,747, a per capita debt of \$23.24, and an increase over the amount reported in 1902 of \$58,647,810, or 74.6 per cent. During the period 1890 to 1902 the net debt of all civil divisions increased \$37,903,195, or 93.2 per cent. The per capita debt in 1913 showed an increase of \$7.59, or 48.5 per cent, over the amount reported in 1902, while the latter year showed an increase of \$5.02, or 47.2 per cent, over the amount reported in 1890. Of the net debt reported, the counties were obligated for \$11,555,014, or 8.4 per cent; the cities, towns, villages, townships, etc., for \$121,342,112, or 88.4 per cent; and the school districts, for \$4,310,621, or 3.2 per cent.

The counties of the state reported a total debt of \$11,598,962, of which \$9,192,615, or 79.3 per cent, represented funded or fixed debt; \$2,100,653, or 18.1 per cent, revenue loans; and \$305,694, or 2.6 per cent, outstanding warrants. No special assessment loans were reported. As an offset to this gross debt the counties held in sinking funds \$43,948, or 0.4 per cent of the total debt, leaving a net debt of \$11,555,014. The net debt reported in 1913 represented an increase of \$4,141,219, or 55.9 per cent, over the amount reported in 1902, while the indebtedness in the latter year showed a decrease of \$3,602,585, or 32.7 per cent, from the amount reported in 1890. The per capita debt of Illinois counties is comparatively low. Monroe County reported the highest per capita debt, \$7.43, an amount \$3.30 in excess of the next highest, while two counties reported a per capita debt of less than one-half of 1 cent. The per capita debt shows an increase of \$0.49 during the period 1902 to 1913. During the period 1890 to 1902 the per capita debt decreased \$1.41, or 49 per cent, from the amount reported in 1890. The counties generally reported a material reduction in debt during the period 1902 to 1913. Of the 102 counties in the state, only 54 reported debt in any amount in 1913; whereas in 1902, 80 counties reported debt. During the period 1902 to 1913 Cook County reported an increase of \$6,679,933, while the other counties of the state as a whole de-

creased their indebtedness by \$2,538,714. Of the 80 counties which reported debt in 1902, 66 reported a decrease of indebtedness in 1913, some of them canceling the entire amount of their obligations during the period considered.

The cities, towns, and villages of the state reported a gross debt of \$119,103,243 in 1913. Of this amount, \$77,750,082, or 65.3 per cent, represented funded or fixed debt; \$25,421,429, or 21.3 per cent, special assessment loans; \$11,694,810, or 9.8 per cent, revenue loans; and \$4,236,922, or 3.6 per cent, warrants. The incorporated places held sinking funds amounting to \$4,648,701, or 3.9 per cent of the total debt. The net debt reported in 1913 was \$114,454,542, an increase of \$50,095,816, or 77.8 per cent, over the amount reported in 1902; this latter year showing an increase of \$43,135,217, or 203.2 per cent, over the amount reported in 1890. The per capita debt for all incorporated places in 1913 was \$26.38, a small per capita debt as compared with that of places of the same class in other states. The city of Chicago, with a net debt of \$81,699,819, was the largest individual debtor in the state, and reported 71.4 per cent of the net debt of all incorporated places. The net debt of Chicago showed an increase during the period 1902 to 1913 of \$29,877,150, or 57.6 per cent, while the amount reported in 1902 showed an increase of \$38,642,415, or 293.2 per cent, over that reported in 1890. The per capita debt was \$11.98 in 1890, increasing to \$26.22 in 1902 and to \$34.85 in 1913, the rate of increase during the first period being 118.9 per cent, and during the last period 32.9 per cent.

Every city having a population of 30,000 or over, except Quincy, showed a material increase in the amount of indebtedness during the period 1902 to 1913. The above-named city, however, showed a reduction of \$587,633, or 57.6 per cent, in net debt, and \$15.63, or 57 per cent, in per capita debt. The city of Joliet, although reporting a slight increase in the net debt, shows a decrease of \$0.53, or 3 per cent, in per capita debt. All other cities in this group show material increases in both net and per capita indebtedness.

The 33 cities in the group having a population of 8,000 to 30,000 reported a net indebtedness of \$9,732,536, an increase of \$5,436,488, or 127.1 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net debt of places in this class increased \$2,463,477, or 134.4 per cent. Seven cities in this group reported a decrease of indebtedness during the period 1902 to 1913, and 8 cities show a reduction in the per capita debt. In general, however, as indicated by the total for the group, there have been considerable increases, a number of places reporting increases in net indebtedness amounting to more than 100 per cent.

The largest percentage of increase was reported in that group of cities having a population of 2,500 to

8,000. These places reported a net debt of \$8,691,084 in 1913, an increase of \$7,266,366, or 510 per cent, over the amount reported in 1902. The highest per capita debt reported in the state occurs in this group, the city of East Moline, with a population of 2,665, having reported a net debt of \$271,769, a per capita debt of \$101.98. The cities in this group, of which there were 99; generally show an increase of indebtedness over the amount reported in 1902, although there are some exceptions, notably Naperville and Paxton, both of which reported debt in 1902 and no debt in 1913. The per capita debt for this group in 1913 was \$20.30.

According to the 1910 census there were 920 incorporated places in Illinois with a population of less than 2,500. Reports from 861 of these places were secured by correspondence, and of this number, 372 reported a net indebtedness aggregating \$3,878,838, an increase of \$2,738,011, or 240 per cent, over the amount reported in 1902. The per capita debt of these places in 1913 was \$6.17, based on the total population of all places reporting. No per capita debt was calculated for these places, as a group, in prior years.

The "specified civil divisions" shown in Table 7 include drainage and levee districts, road districts, and townships, and these reported a total indebtedness in 1913 amounting to \$6,979,525. Of this amount, \$4,664,094, or 66.8 per cent, represented funded or fixed debt; \$2,123,774, or 30.4 per cent, special assessment loans; and \$191,657, or 2.8 per cent, warrants. Offsetting this amount were sinking funds amounting to \$91,955, or 1.3 per cent of the total debt, leaving a net debt of \$6,887,570, or 5 per cent of the net indebtedness of all civil divisions. This amount is 59.6 per cent of the net debt of all counties and indicates the importance of these divisions within the county, especially the drainage and levee districts, which alone reported a net indebtedness of \$5,188,666.

The independent school districts in Illinois reported a net debt of \$4,310,621, an increase of \$539,589, or 14.3 per cent, over the amount reported in 1902. This amount represents only the indebtedness of independent school districts, and does not include the indebtedness on account of schools for incorporated places having a population of 2,500 or more which is included with other debt of such places in Table 6.

Taking all the civil divisions of the state as a single unit, it will be seen that the gross indebtedness amounted to \$137,681,730. Of this amount, \$91,606,791, or 66.5 per cent, represented funded or fixed debt; \$27,545,203, or 20 per cent, special assessment loans; \$13,795,465, or 10 per cent, revenue loans; and \$4,734,273, or 3.5 per cent, warrants. Against the total debt the various divisions reported sinking funds with assets amounting to \$4,784,604, or 3.5 per cent of the total debt, leaving a net debt of

\$132,897,126. To this amount should be added the net indebtedness reported by the independent school districts, bringing the total net debt up to \$137,207,747.

INDIANA.

The civil divisions of Indiana reported a total debt less sinking fund assets amounting to \$66,053,653 in 1913. Of this amount, the counties had incurred \$9,721,434, or 14.7 per cent; the cities, towns, villages, townships, etc., \$50,653,058, or 76.7 per cent; and the school districts, \$5,679,161, or 8.6 per cent of the total debt. The net debt reported for these divisions shows an increase of \$34,139,489, or 107 per cent, over the amount reported in 1902. The per capita debt increased \$11.57, or 93.6 per cent, during the same period. During the period 1890 to 1902 the net debt increased \$16,009,592, or 100.7 per cent, while the per capita debt increased \$5.11, or 70.5 per cent.

It is worthy of note that the entire increase in the debt of the civil divisions in Indiana has been in those divisions classified in Table 2 as "cities, towns, villages, townships, etc.," the counties having reported a decrease of \$3,326,619, or 25.5 per cent, during the period 1902 to 1913, while the first-mentioned divisions, including school districts, show an increase of \$37,466,103, or 198.6 per cent. The debt of school districts is included in this amount, because it was not shown separately in 1902 and was evidently included with that of cities, towns, villages, etc.

The counties of Indiana reported a total debt of \$10,497,916 in 1913. Of this amount, \$9,471,019, or 90.2 per cent, represented funded or fixed debt; \$985,970, or 9.4 per cent, revenue loans; and \$40,927, or 0.4 per cent, outstanding warrants. Sinking fund assets amounting to \$776,482, or 7.4 per cent of the total debt, were held by the counties.

The net debt of the counties reported in 1913 represented a decrease of \$3,326,619, or 25.5 per cent, from that of 1902. The per capita debt decreased \$1.56, or 30.7 per cent, during the same period. During the period 1890 to 1902 the net debt increased \$6,641,814, or 103.7 per cent, while the per capita debt increased \$2.16, or 74 per cent.

The counties of Indiana did not report any indebtedness to be paid from special assessments levied. Assessments for road building which affect contiguous property only have been held not to be a special or local assessment within the meaning of the prohibiting statute.

In 1902 all but 8 of the 92 counties in the state reported debt, while in 1913 the number reporting no debt was 7. Of the counties which reported debt in 1902, 65 show some reduction in 1913, many of them having retired all of the bonds outstanding in 1902.

The indebtedness of the cities, towns, and villages considered apart from other civil divisions amounted

to \$19,986,045 in 1913. The funded or fixed debt was \$18,912,395, or 94.6 per cent of the total. Revenue loans amounted to \$683,360, or 3.4 per cent, and outstanding warrants to \$390,290, or 2 per cent of the total debt. Sinking funds were reported, amounting to \$831,260, or 4.2 per cent of the total debt. The net debt of these divisions was \$19,154,785 in 1913, an increase of \$1,156,742, or 6.4 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net debt increased \$9,208,775, or 104.8 per cent. The per capita debt for all incorporated places in 1913 was \$12.77.

The largest percentage of increase in the net debt of cities was reported by those places having a population of 30,000 and over and amounted to 11.4 per cent. Those cities having a population of 8,000 to 30,000 show an increase of 7.5 per cent, and those having a population of 2,500 to 8,000 show an increase of 1 per cent. Contrary to the condition in many states those cities, towns, and villages in Indiana having a population of less than 2,500 show a decrease of 18.5 per cent.

Indianapolis, the largest city in the state, is the largest individual debtor. The net debt of this city shows an increase of only \$665,456, or 16 per cent. The per capita debt decreased during this period from \$22.36 to \$19.05, or 14.8 per cent. Evansville was the only city of over 30,000 population to show a decrease in the net debt, although all the cities of this class, with the exception of Terre Haute, show a decrease in the per capita debt. Nineteen of the 30 cities having a population of 8,000 to 30,000 show decrease in the per capita debt, although in some cases this is due to an increased population rather than to a decreased amount of indebtedness. Of those cities having a population of 2,500 to 8,000, nearly one-half show a decreased per capita debt. The per capita debt for those places under 2,500 population was not calculated for 1902 and 1890. Inasmuch, however, as these places show a decrease of \$251,895 in the net debt, it is safe to assume that the same condition with regard to reduction of the per capita debt continues in cities of this class.

There were 383 cities, towns, and villages in Indiana with a population of less than 2,500. Reports from 367 of these places were secured by correspondence, and of this number, 204 reported debt in 1913 aggregating \$1,107,458, or a per capita of \$3.88, basing the per capita upon the population of all places reporting. As mentioned above, these places show a decrease in the net debt. Because of a difference in classification no per capita figures are shown for those places for 1902.

The townships in Indiana incurred the greater portion of the indebtedness of the civil divisions, they alone having reported a debt of \$31,790,854, or 46.8 per cent of the total debt. Of the whole amount,

\$30,806,675, or 96.9 per cent, was funded or fixed debt, practically all of which was in the form of general bonds. Revenue loans amounted to \$897,789, or 2.8 per cent, and outstanding warrants to \$86,390, or 0.3 per cent of the total debt. The sinking funds held by townships amounted to \$292,581, or 0.9 per cent of the total debt of these divisions.

As suggested above, the townships occupy a very prominent place in the conduct of the fiscal affairs of the state. They are charged with the building and upkeep of all roads, bridges, surface drainage, and similar work within their boundaries and outside of the cities and villages. The building of hard roads in practically every county in the state is responsible for the comparatively large debt of these divisions, and in many cases the entire debt of the county was on this account. In several counties the combined debt of all townships for good roads amounts to over half a million dollars, and in Lake County this amount is exceeded by two individual townships. The largest debt on account of good roads was reported by Pulaski County and exceeded \$2,900,000. It is an interesting fact that the indebtedness of the state, as a whole, for this single item of improvement exceeds the entire indebtedness of many of the states.

The net debt of the townships was \$31,498,273 in 1913, an increase of \$30,630,205, or 3,528.5 per cent, over the amount reported in 1902. The school districts reported a total debt of \$5,679,161. This amount was secured from state records and represents the indebtedness on account of schools outside of those cities having a population in excess of 2,500. The indebtedness of school districts was not reported separately in 1902, nor was it possible to secure any classification of the debt in 1913.

Considering the indebtedness of all the civil divisions of the state, excepting school districts, as a single unit, the total debt amounted to \$62,274,815. Of this amount, \$59,190,089, or 95.1 per cent, represented funded or fixed debt; \$2,567,119, or 4.1 per cent, revenue loans; and \$517,607, or 0.8 per cent, outstanding warrants. Against this amount were sinking funds to the amount of \$1,900,323, or 3.1 per cent of the total debt, leaving a net debt of \$60,374,492, not including the debt of school districts, for which the classes of obligation were not reported.

IOWA.

The total net debt reported by the civil divisions of the state of Iowa in 1913 amounted to \$35,069,386. Of this amount, the counties were obligated for \$9,580,266, or 27.3 per cent; the cities, towns, villages, etc., for \$22,142,931, or 63.1 per cent; and the independent school districts, for \$3,346,189, or 9.6 per cent of the total. The indebtedness reported in 1913 represents an increase of \$17,679,011, or 101.7 per cent, over that reported for 1902. The per capita

increase during this period was \$7.96, or 101.8 per cent, which is slightly more than the percentage of increase of the net debt. During the period 1890 to 1902 the net debt increased \$6,364,991, or 57.7 per cent, the per capita debt increasing \$2.05, or 35.5 per cent, during the same period.

The total debt reported by the counties of Iowa in 1913 amounted to \$9,580,266. The funded or fixed debt was \$4,815,261, or 50.3 per cent of the total; debt to be paid from special assessments amounted to \$3,697,187, or 38.6 per cent; while the revenue loans amounted to \$1,067,818, or 11.1 per cent of the total. None of the counties of Iowa reported sinking fund assets. The laws of the state, while limiting the amount of debt to be contracted to 5 per cent of the assessed valuation, do not specifically require any provision for payment in the form of sinking fund accumulations.

The net debt of the counties amounted to \$9,580,266 in 1913, an increase of \$5,297,623, or 123.7 per cent, over the reported debt of 1902. The per capita debt during this period increased \$2.38, or 123.3 per cent, only a very little less than the percentage of increase in the net debt. During the period 1890 to 1902 the net debt increased \$865,754, or 25.3 per cent, while the per capita debt increased only \$0.14, or 7.8 per cent.

Twenty-three of the 99 counties in Iowa reported no debt in 1913, while several of the 76 remaining counties reported comparatively small amounts. The largest county debt was reported by Polk County and amounted to \$858,185, a per capita debt of \$7.18. The funded or fixed debt of the counties of Iowa increased only \$1,305,761, or 37.2 per cent, during the period 1902 to 1913, while the indebtedness to be paid from special assessments increased from \$46,508 in 1902 to \$3,697,187 in 1913. An investigation of the schedules of debt returned for the year 1913 would indicate that the major portion of the indebtedness in the special assessment class was incurred for the purpose of drainage of farm lands and for road improvement. The demand for good roads has only in recent years developed to the point of action in rural communities, and since their importance has come to be realized it is only natural that a general and concerted effort should be made in this direction.

The entire absence of indebtedness in the form of outstanding warrants is accounted for by the fact that all outstanding warrants were interest bearing and were classified as revenue loans.

The total debt of the cities, towns, and villages in Iowa amounted to \$22,275,959. Of this amount, \$19,081,368, or 85.6 per cent, represented funded or fixed debt, chiefly general bonds; \$1,418,400, or 6.4 per cent, special assessment loans; \$936,390, or 4.2 per cent, revenue loans; and \$839,801, or 3.8 per cent, outstanding warrants. As an offset to this debt, sink-

ing funds to the amount of \$281,805, or 1.3 per cent of the total debt, were held by the cities. The net debt of the cities, towns, and villages reported in 1913 was \$21,994,154, an increase of \$9,886,880, or 81.6 per cent, over that of 1902. During the period 1890 to 1902 the net debt of all cities increased \$6,089,768, or 101.2 per cent. The per capita debt for these places in 1913 was \$19.13. The per capita debt for prior years was not calculated.

Each of the various classes of cities, considered as a unit, reported a material increase in indebtedness over 1902, and the debt of the latter year also shows an increase over 1890. Des Moines, the largest city in the state, reported the largest debt in 1913, and its indebtedness increased very materially during the period 1902 to 1913, the increase being 126.3 per cent. Waterloo, however, reported the largest percentage of increase among those cities which had more than a merely nominal debt in 1902, the increase being 62.4 per cent. Dubuque and Sioux City were the only cities in the state having a population in excess of 30,000 which reported a decrease in the net debt.

The indebtedness shown in this bulletin for cities, towns, and villages having a population of less than 2,500 was taken largely from state reports supplemented by reports received directly from city officials. There were 768 incorporated places in this class in 1910, and of this number reports were secured for 765. Debt was reported by 442 of this number, the aggregate being \$3,321,043, a per capita debt of \$7.36, basing the computation on the population of all places reporting.

The school districts of Iowa reported a considerable portion, 9.5 per cent, of the total debt. It must not be assumed that the amount shown in the column headed "School districts" represents the total debt of the counties on account of schools. As explained in the general text with reference to Table 2, any obligation on account of schools in cities having a population of 2,500 or more is included with the indebtedness of the city.

As shown in Table 7, the townships of Iowa reported a total debt of \$152,040 in 1913. Of this amount, \$4,061, or 2.7 per cent, was in the form of general bonds; \$136,830, or 90 per cent, was to be paid from special assessments; and \$11,149, or 7.3 per cent, was in the form of outstanding warrants. As an offset to this debt, these divisions held sinking fund assets amounting to \$3,263, or 2.1 per cent of the total debt. The net debt of the townships amounted to \$148,777 in 1913, as compared to \$41,010 in 1902, an increase of 262.8 per cent.

Nearly, if not quite, all of this amount was expended for the improvement of roads and ditches. The funded or fixed indebtedness shown for the townships consisted in part of bonds and in part of long-term certificates of indebtedness. The amount to be paid

from special assessments forms the greater portion of the debt of these divisions, and it is very probable that the outstanding warrants were to be paid from funds obtained in this manner. In view of the fact that the townships in Iowa have the power to levy taxes and to incur debt, the amount shown here is very small. It represents, however, practically all of the indebtedness of these divisions in the state, reports having been secured from fully 95 per cent of all the townships, the greater number of which reported no debt.

Referring to the classification of the indebtedness of all civil divisions, it will be noted that of the total debt reported, \$23,900,690, or 74.7 per cent, was in the form of general bonds; \$5,115,587, or 16 per cent, was to be paid from special assessments; \$2,141,038, or 6.7 per cent, was in the form of revenue loans; and \$850,950, or 2.6 per cent, was in the form of outstanding warrants and orders. As an offset to this debt, all civil divisions reported sinking fund assets of \$285,068, or 0.9 per cent of the total debt. The indebtedness of the school districts was \$3,346,189, or 9.5 per cent of the total debt. This debt was reported as a total, hence no classification can be made.

KANSAS.

The civil divisions of Kansas reported an indebtedness less sinking fund assets amounting to \$52,624,731 in 1913. The counties of the state reported \$9,777,030, or 18.6 per cent of the net debt; the cities (there are no incorporated towns or villages in the state) reported \$39,543,303, or 75.1 per cent; and the school districts reported \$3,304,398, or 6.3 per cent. The net debt reported in 1913 represents an increase of \$17,482,237, or 49.7 per cent, over the amount reported in 1902; while during the period 1890 to 1902 these divisions reported a decrease in the net debt amounting to \$4,366,870, or 11.1 per cent. The per capita debt in 1913 was \$31.22, an increase of \$7.23, or 30.1 per cent, over that in 1902; while during the period 1890 to 1902 the per capita debt decreased \$3.70, or 13.4 per cent, a rate slightly in excess of the rate of decrease of the net debt.

The counties of the state as separate units reported a total indebtedness of \$10,230,268 in 1913. Of this amount, \$9,465,534, or 92.5 per cent, represented funded or fixed debt, chiefly in the form of general bonds; \$648,898, or 6.3 per cent, revenue loans; and \$115,836, or 1.1 per cent, outstanding warrants. It will be noted that no indebtedness to be paid from special assessments was reported by the counties. The net debt reported by these divisions was \$9,777,030 in 1913, this amount being a decrease of \$3,122,826, or 24.2 per cent, from 1902 to 1913. During the period 1890 to 1902 the debt of the counties decreased \$1,905,196, or 12.9 per cent. The per capita debt decreased from \$10.37 in 1890 to \$8.75 in 1902, and to \$5.80 in 1913, representing a total

decrease of \$4.57, or 44 per cent, during the period covered by this bulletin. While a number of the counties reported a considerable increase in their debt obligations, 20 of those reporting debt in 1902 were entirely free from debt in 1913, and many others showed a very material decrease during this period.

The highest per capita debt, \$147.55, was reported by Haskell County, but the report shows that this amount represents a decrease of \$99.26, or 40.2 per cent, from the amount reported in 1902. The per capita debt generally shows a substantial decrease.

As shown in Table 2, the cities of the state bear the greatest burden of debt. The incorporated places reported a total debt in 1913 amounting to \$37,804,214, of which \$27,518,292, or 72.8 per cent, represented funded or fixed debt; \$9,288,146, or 24.6 per cent, special assessment loans; \$572,753, or 1.5 per cent, revenue loans; and \$425,023, or 1.1 per cent, outstanding warrants. Offsetting this total debt, the incorporated places held sinking funds amounting to \$1,074,491, or 2.8 per cent of the total debt. The net debt reported in 1913 was \$36,729,723, an increase of \$23,144,819, or 170.4 per cent, over the amount reported in 1902. The per capita debt was \$45.85 in 1913. The per capita debt was not calculated for these divisions as a whole in 1902 and 1890. During the period 1890 to 1902 the net debt of incorporated places increased \$3,150,549, or 30.2 per cent.

As indicated by the total for all cities, many of the more important places of the state reported an increase of debt obligations in excess of 100 per cent, several reporting increases in excess of 300 per cent. An examination of the reports from these places shows that the greater portion of the debt reported in 1913 was incurred for the purpose of constructing or purchasing water systems, the building of sanitary sewers, and for the permanent paving of streets. In some cases the debt was incurred for municipal buildings, schools, etc. Nearly every city in the state reported an increased per capita debt, but it will be noted that, as a general rule, the rate of increase for the per capita debt was much less than the rate of increase for the net debt. It will be noted, also, that the debt to be paid from special assessments forms a large proportion of the total debt, approximating one-third, while the revenue loans and outstanding warrants form only a very small part of the total, many places reporting no debt in either of these classes.

The three largest cities in the state—Kansas City, Topeka, and Wichita—reported a total debt of \$14,571,335, or 38.5 per cent of the total debt of all incorporated places. The greatest increase in net debt was reported by Wichita, and the greatest percentage of increase in this group is shown for the same city.

In the group comprising cities having a population of 8,000 to 30,000, Atchison reported the largest debt,

and Independence reported the largest per capita debt, \$103.36. Leavenworth is the only city in this group which reported a reduction in both net and per capita debt.

Every city in the group comprising places having a population of 2,500 to 8,000 reported an increase in both net and per capita debt. The city of Manhattan reported the largest net debt as well as the largest per capita debt. Rosedale and Arkansas City were next in order of the amount of net debt.

According to the census of 1910 there were 419 incorporated cities in Kansas having a population of less than 2,500. Reports were secured from each of these places by correspondence, and of the total number, 219 reported a net debt aggregating \$5,660,798, an increase of \$3,332,600, or 143.1 per cent, over the amount reported in 1902. During the period 1890 to 1902 places in this group reported a decrease in net debt amounting to \$127,806, or 5.2 per cent.

The townships of the state reported a total debt of \$3,251,108, with sinking fund assets amounting to \$439,528, leaving a net debt of \$2,811,580, or 5.3 per cent of the total net debt of all civil divisions shown in Table 2. This debt was quite uniformly distributed over the state, with the exception of a few counties which had no township debt. Fully 75 per cent of the amount reported was for the improvement and repair of highways and bridges. The drainage districts of the state reported a total and net debt of \$2,000.

The school districts of the state reported a total net debt of \$3,304,398, an increase of \$982,199, or 42.3 per cent, over the amount reported for these districts in 1902. The indebtedness shown for school districts for 1913 represents only the debt on account of schools that had been incurred by independent school districts.

Considering all civil divisions in the state, except school districts, as a single unit, the gross debt amounted to \$51,287,590, of which \$40,146,799, or 78.3 per cent, represented funded or fixed debt; \$9,288,146, or 18.1 per cent, special assessment loans; \$1,274,438, or 2.5 per cent, revenue loans; and \$578,207, or 1.1 per cent, outstanding warrants. As an offset to this debt all divisions held sinking funds amounting to \$1,967,257, or 3.8 per cent of the total debt, leaving a net debt of \$52,624,731, including the debt of independent school districts, \$3,304,398, which is assumed to be net.

KENTUCKY.

The total debt less sinking fund assets reported by the civil divisions of the state of Kentucky for 1913 amounted to \$25,588,562. Of this amount, \$4,568,780, or 17.9 per cent, had been incurred by the counties, and \$21,019,782, or 82.1 per cent, by the cities, towns, villages, etc.

The net debt for 1913 shows an increase of \$5,038,271, or 24.5 per cent, over that of 1902, while during the period 1890 to 1902 the net debt increased \$2,788,539, or 15.7 per cent. During the last-mentioned period the per capita debt decreased from \$9.56 to \$9.32, or 2.5 per cent, though, as stated above, the net debt showed a material increase. During the period 1902 to 1913 the per capita debt increased from \$9.32 to \$10.95, or 17.5 per cent, a rate slightly less than the rate of increase of indebtedness. The population of the state increased only 6 per cent during this period.

The counties of Kentucky reported a total indebtedness of \$4,924,621 in 1913. Of this amount, \$4,003,674, or 81.3 per cent, represented funded or fixed debt; \$900,403, or 18.3 per cent, revenue loans; and \$20,544, or 0.4 per cent, outstanding warrants or orders. Offsetting this indebtedness the counties held sinking fund assets to the amount of \$355,841, or 7.2 per cent of the total debt. The net debt of the counties for 1913 was \$4,568,780, a decrease of \$579,004, or 11.2 per cent, since 1902. The per capita debt decreased \$0.26, or 11.7 per cent, during this period. The decrease in net debt from 1890 to 1902 amounted to \$564,679, or 9.9 per cent, while the per capita debt decreased \$0.85, or 27.7 per cent.

Inasmuch as the counties in Kentucky assume all of the burden of schools, highway improvements, etc., outside of incorporated places, the per capita debt was very low. The fact that the indebtedness has been uniformly reduced during the past 23 years is also deserving of mention. Twenty of the 120 counties in the state reported no debt, and many others reported only a very small amount of warrants outstanding.

The cities, towns, and villages in Kentucky are the only debt-contracting civil divisions, aside from the counties, and reported a total debt of \$23,563,168 in 1913. Of this amount, \$21,919,883, or 93 per cent, represented funded or fixed debt; \$1,419,444, or 6 per cent, special assessment and revenue loans; and \$223,841, or 1 per cent, outstanding warrants. As an offset against this debt, the cities, towns, and villages held sinking fund assets amounting to \$2,543,386, or 10.8 per cent of the total debt.

The net debt of the incorporated places amounted to \$21,019,782 in 1913, an increase of \$5,745,464, or 37.6 per cent, over that of 1902, while during the period 1890 to 1902 the net debt increased \$3,393,901, or 28.6 per cent. The per capita debt for 1913 was \$28, based on the population of all places reporting. The per capita debt for all incorporated places was not calculated for the years 1902 and 1890.

Each class of incorporated places as grouped by population shows an increase in the net debt of 1913 over that reported in 1902, which in turn shows an increase over that of 1890. The group of cities having over 30,000 inhabitants shows the largest increase in the amount of indebtedness, while the group having

from 2,500 to 8,000 inhabitants shows the largest percentage of increase. The per capita debt of the cities of Kentucky shows the general tendency to increase with the size of the city, ranging from \$3.01 for those places having less than 2,500 inhabitants to \$47.56 for those places having a population of 30,000 or more.

In 1910 there were 355 incorporated places in Kentucky with a population of less than 2,500. Reports for these places were secured by correspondence. Of the total number, 319 replied to the inquiries sent them, and of this number, 71 reported debt aggregating \$582,234, with sinking fund assets amounting to \$53,428, or 9.2 per cent of the total debt. The per capita debt for incorporated places of this class was only \$3.01, a very small sum as compared with the majority of the states. A number of these places showed a very material decrease in debt since 1902. Only 10 of these smaller places reported debt to be paid from special assessments, the total of this class of indebtedness amounting to \$108,863.

There is no separately reported school debt for Kentucky. The schools, with the possible exception of a few scattered districts, are maintained by the counties, cities, or villages within which they are located.

Considering all the civil divisions as a single unit it is found that the total debt amounted to \$28,487,789. Of this indebtedness, \$25,923,557, or 91 per cent, represented funded or fixed debt; \$774,327, or 2.7 per cent, special assessment loans; \$1,545,520, or 5.4 per cent, revenue loans; and \$244,385, or 0.9 per cent, outstanding warrants. The sinking fund assets amounted to \$2,899,277, or 10.2 per cent of the total debt.

LOUISIANA.

The total debt less sinking fund assets reported by the civil divisions in Louisiana in 1913 amounted to \$61,460,681, a per capita indebtedness of \$35.21 for the civil divisions of the state which are considered in this report.

Of the net indebtedness, the parishes were responsible for \$3,153,848, or 5.1 per cent; the cities, towns, and villages for \$47,289,433, or 76.9 per cent; and the levee and drainage districts for \$11,017,400, or 17.9 per cent.

During the period 1902 to 1913 the net debt of the civil divisions of the state increased \$37,276,429, or 154.1 per cent; the per capita debt during the same period increased \$18.35, or 108.8 per cent. During the period 1890 to 1902 the net debt increased \$6,857,340, or 39.6 per cent, while the per capita debt during the same period increased only \$1.37, or 8.8 per cent. Sixty per cent of the increase of net debt during the period 1890 to 1902 was due to the issue of levee district obligations amounting to \$4,111,799. In 1913 this class of indebtedness had increased to

\$11,017,400, a per capita debt, based on the population of the state, of \$6.31, or 17.9 per cent of the total per capita debt.

The total debt of the parishes in Louisiana in 1913 amounted to \$3,153,848. Of this amount, \$2,546,098, or 80.7 per cent, was in the form of funded or fixed debt; \$600,478, or 19 per cent, revenue loans; and \$7,272, or 0.2 per cent, outstanding warrants. There were no sinking funds held by the parishes of Louisiana. The constitution of the state requires that at the time bonds are issued provision shall be made for their payment, and this provision is apparently met by annual levies sufficient to cover the interest maturing during the year and a certain portion of the principal of the bonds.

During the period 1902 to 1913 the net debt of the parishes increased \$2,522,291, or 399.4 per cent; the per capita debt during the same period increased \$1.72, or 312.7 per cent. The increase of indebtedness during this period was general throughout the state. All but 4 of the 64 parishes reported debt in 1913, while in 1902 only 33 reported debt. Three of the parishes reporting debt in 1902 show a decrease during the period 1902 to 1913, all the others showing either an increase or an original indebtedness incurred during the period. While the figures shown in this bulletin cover only a single year and hence could scarcely be relied upon to show the purpose of an indebtedness incurred during a period of 10 years, yet the reports would indicate that a large portion of the increase was due to debt incurred on account of new buildings and equipment for public schools. The receipts from the sale of school bonds during the year ending June 30, 1913, amounted to \$521,869, and during the period 1911 to 1913 a total of \$1,347,116 was expended for the erection of school buildings alone. This single item would appear to account for at least one-half of the increase of indebtedness since 1902.

The increase of net indebtedness of parishes during the period 1890 to 1902 amounted to \$453,759, or 255.2 per cent; the per capita increase during the same period was \$0.35, or 175 per cent. Almost all of this increase was due to debt originating during the period, the parishes which reported debt in 1890 having generally reported a decreased amount in 1902.

An increase of \$27,777,787, or 142.9 per cent, in the net debt of cities, towns, and villages is shown for the period 1902 to 1913, while during the period 1890 to 1902 the increase amounted to but \$2,291,782, or 13.4 per cent. The per capita debt for these places was not calculated for 1902 and 1890.

The total debt of incorporated places, including levee and drainage districts and wards, amounted to \$58,546,081 in 1913. Of this amount, \$52,291,283, or 89.3 per cent, was in the form of funded or fixed debt; \$6,157,976, or 10.5 per cent, was special assessment and revenue loans; and \$96,822, or 0.2 per cent,

was in the form of outstanding warrants. As an offset to this debt, sinking funds were held by the incorporated places amounting to \$239,248, or 0.4 per cent of the total debt.

All of the incorporated places having a population of 2,500 or more reported debt in 1913, and these, with but few exceptions, show an increase in the net debt over that in 1902. There were 146 incorporated places in the state having a population of less than 2,500. The number reporting was 125, and of these, 38 reported an indebtedness of \$404,641, with sinking fund assets of \$13,547, leaving a net debt of \$391,094, a per capita debt of \$4.12, based on the population of places reporting. During the period 1902 to 1913 the indebtedness of these places increased \$348,730, or 823.2 per cent. Owing to the meager information secured by correspondence no explanation can be given for this very large increase of debt. However, it may be due to the fact that in 1902 reports were secured from only 13 places of this class. No reports were secured for 1890 from those places which had a population of less than 2,500 in 1910.

The city of New Orleans carries the largest municipal debt in the state; the total debt less sinking fund assets was \$43,870,633 in 1913, an increase of \$25,559,312, or 139.6 per cent, over that of 1902. The increase from 1890 to 1902 was comparatively small, amounting to \$1,413,867, or 8.4 per cent.

The indebtedness for levee districts reported in 1913 amounted to \$11,017,400, an increase of \$6,905,601, or 167.9 per cent, over the amount reported in 1902. This indebtedness is in the form of bonds issued by sixteen levee districts, covering practically the whole of the Mississippi basin within the state. Of the bonds outstanding in 1913 the first issue was made in 1892. Other issues were made in 1894, 1898, and in each succeeding year up to and including 1910. The amount reported is that outstanding March 1, 1912.

MAINE.

The civil divisions of Maine reported a total debt less sinking fund assets of \$21,542,712 in 1913. Of this amount, \$1,462,952, or 6.8 per cent, had been incurred by the counties of the state; and \$20,079,760, or 93.2 per cent, by the cities, villages, towns, and other civil divisions. The total net debt reported in 1913 represents an increase of \$9,281,276, or 75.7 per cent, over that of 1902. During the same period the per capita debt increased from \$17.49 to \$28.42, or 62.5 per cent. During the period 1890 to 1902 the increase for all civil divisions amounted to only \$131,567, or 1.1 per cent. As might be anticipated, the per capita debt decreased during this period from \$18.35 to \$17.49, or 4.7 per cent, the population of the state having increased from 661,086 in 1890 to 701,142 in 1902, or 6.1 per cent.

The counties of the state have shown a steadily increasing net debt since 1890. In that year the debt of these divisions amounted to \$434,346, a per capita of \$0.66. In 1902 the debt had increased to \$890,743, a per capita of \$1.27, and in 1913 the amount had increased to \$1,462,952, a per capita of \$1.93. The rate of increase in indebtedness was 105.1 per cent and 64.2 per cent, respectively; while the rate of increase in the per capita debt was 92.4 per cent and 52 per cent, respectively.

The total debt of the counties in 1913 was \$1,853,215. Of this amount, \$1,775,500, or 95.8 per cent, represented funded or fixed debt; \$71,841, or 3.9 per cent, revenue loans; and \$5,874, or 0.3 per cent, outstanding warrants. No debt to be paid from special assessments appears in the county statements.

All but 2 counties—Franklin and Piscataquis—of the 16 counties of the state reported debt; while a third, Hancock, reported a debt of only \$656, which was in the form of outstanding warrants. The counties of Cumberland, Washington, and Aroostook incurred the greater portion of the debt of the counties, having obligations to the amount of \$1,532,000, although Aroostook County had sinking fund assets of \$289,837, or \$12,837 in excess of the reported indebtedness. The greater portion of the bonded debt of these counties was incurred for courthouse construction and for aiding in the building of railroads.

As an offset to the total debt of the counties, there were sinking funds amounting to \$390,263, or 21 per cent of the total debt.

As shown above, over 93 per cent of the net debt of the civil divisions of the state was incurred by the cities, villages, towns, etc. "Towns" in the sense of the term as used here, must not be confused with the generally accepted meaning of the word, but should be understood as meaning that class of civil divisions corresponding to what are commonly known as congressional townships, though lacking the uniformity of size and boundary of such townships. Their functions, too, are somewhat different, and more nearly approach those of a city or village. For this reason, and as a matter of convenience, all towns having a population of 2,500 or more have been included with the cities, while those with a population of less than 2,500 are shown together as minor civil divisions of the county in Tables 1 and 2, and as "specified civil divisions" in Tables 5 and 7.

Considering these cities, villages, and towns as a unit, it will be seen that the total debt reported in 1913 amounted to \$17,606,776. Of this amount, \$16,230,844, or 92.2 per cent, was in the nature of funded or fixed debt; \$1,361,460, or 7.7 per cent, revenue loans; and \$14,472, or 0.1 per cent, outstanding warrants. Offsetting this debt were sinking fund assets to the amount of \$1,078,712, or 6.1 per cent of the total debt.

The net debt of these civil divisions increased \$6,980,458, or 73.1 per cent, during the period 1902 to 1913. During the period 1890 to 1902 the net debt shows an increase of \$6,119, or less than 1 per cent. The per capita debt in 1913 was \$41.19. The per capita debt was not calculated for prior years. The city of Portland was the largest individual debtor in the state. This city reported a net debt in 1913 of \$7,946,265, an increase of \$5,001,155, or 169.8 per cent, over that of 1902. During the period 1890 to 1902, however, the city reduced its indebtedness from \$2,967,926 to \$2,945,110, or 0.8 per cent. The per capita debt during the same period decreased \$24.65, or 30.3 per cent. During the period 1902 to 1913 the per capita debt of the city increased \$72.78, or 128.1 per cent. This increase was due largely to the construction of bridges, a system of boulevards, and a city hall. The extension of the waterworks system, which is operated as a municipal enterprise, has been carried on at a very considerable expenditure.

Many of the smaller cities show considerable increase in indebtedness, while others show very material decreases. Each of the various classes, however, shows an increase.

The two items, \$2,408 and \$1,134,611, in Table 7, for "specified civil divisions," include the debt of all towns having a population of less than 2,500, plantations, etc. in the state, and are not comparable with any data published in former years. The total debt of "towns" reported in 1902 was \$2,874,509. This amount, however, included the debt of all "towns" regardless of population, while in this report, for reasons explained in the general text, these civil divisions have been separated into two classes, namely, those having a population of 2,500 or more and those having a population of less than 2,500. Those "towns" having a population of 2,500 or more are shown with the cities in this class in Table 6.

The indebtedness reported for the water districts of Maine, \$2,603,000, is exclusive of that of the Portland water district, the indebtedness of which is included in that of the city of Portland as shown in Table 6.

Considering the debt of all civil divisions of the state as a whole, the funded or fixed debt amounted to \$21,569,863, or 93 per cent of the total debt; the debt to be paid from revenue loans was \$1,609,801, or 6.9 per cent of the total; while the outstanding warrants and orders amounted to only \$20,346, or 1 per cent of the total.

The sinking funds of all civil divisions of the state amounted to \$1,657,298, or 7.1 per cent of the total debt.

No data for school districts are shown for the state of Maine, for the reason that the independent school districts have been entirely abolished; the indebtedness for schools, if any, is included in that of the county, city, village, or town in which the schools are located.

MARYLAND.

The total debt less sinking fund assets for all civil divisions in Maryland amounted to \$52,211,884 in 1913. Of this amount, \$2,859,285 represents the indebtedness of the counties, and \$49,352,599 represents that of the cities, towns, and villages. This amount represents a per capita debt of \$39.25 in 1913 as against a per capita debt of \$21.12 in 1902 and \$32.37 in 1890; the total debt in this latter year amounting to \$33,741,040. The reduction in the per capita debt from 1890 to 1902 was to a considerable extent due to an actual reduction in the amount of indebtedness, the population of the state having increased only 16.8 per cent while the debt reduction amounted to 23.8 per cent. During the period from 1902 to 1913, however, the debt shows an increase of 103 per cent, with an increase of only 9.3 per cent in population.

The indebtedness less sinking fund assets of incorporated places in Maryland amounted to \$49,352,599 in 1913, a per capita debt of \$66.77. In 1902 the total debt of these places was \$24,203,171, and in 1890 it was \$32,847,264. The reduction in the debt of incorporated places in the period 1890 to 1902 amounted to \$8,644,093, while that for the city of Baltimore alone amounted to \$9,538,704; showing that while that city reduced its indebtedness, the smaller places increased their indebtedness by \$894,611. Of the total increase in the debt of incorporated places from 1902 to 1913, amounting to \$25,149,428, that for the city of Baltimore was \$24,054,227. In fact, Baltimore city, in 1913, carried 88.7 per cent of the total debt of the counties and incorporated places of the state. In 1902 it bore 86.7 per cent of the total, and 94.3 per cent in 1890. During these years the city contained approximately one-half the population of the state.

The total debt less sinking fund assets of the counties in Maryland, not including the city of Baltimore, which in this report is not considered as a county, amounted to \$2,859,285 in 1913, \$1,497,752 in 1902, and \$893,776 in 1890. The amounts per capita for these years were \$3.78, \$2.16, and \$1.47, showing a gradual increase in the obligations of these civil divisions. Excepting cities, towns, and villages, Maryland, like many of the Southern states, has no general division of government less than the county, which thus assumes financial as well as administrative responsibility for all territory not within the borders of the incorporated places. The schools in Maryland were administered by the counties, which had authority to levy and collect taxes and make disbursements for school purposes. With this condition existing, the county debt, taking the state as a whole, was very low.

While no county of the state was entirely free from debt, the amounts reported were generally small,

ranging from \$3,500 in Calvert County to \$535,344 in Frederick County.

All of the incorporated places of over 2,500 population reported debt and all of these, with the exception of Hagerstown, reported an increase for the periods shown. There are in Maryland 100 incorporated cities, towns, and villages with a population of less than 2,500. Reports for these places, with the exception of such as were county seats, were secured by correspondence. Eight of these places failed to respond to the several inquiries made. Of the 92 places reporting, 37 reported debt less sinking fund assets to the amount of \$599,584, making a per capita debt of \$9.66 for those places reporting.

The sinking fund assets reported in all divisions in Maryland amounted to \$25,373,608, or 32.7 per cent of the gross indebtedness. Of the total amount, \$25,042,925 of these funds was held by the city of Baltimore, and amounted to 35.1 per cent of the gross indebtedness of that city. Of the remainder, \$104,415 was held by counties, and \$226,268, by cities having less than 30,000 population. The sinking fund assets show an increase over the amount held in 1902, of \$7,509,649, or 42 per cent.

Referring to the special classes of indebtedness in the state, it will be observed that the greater portion falls under the classification "funded or fixed," this class amounting to \$76,464,050, compared with \$42,906 of special assessment loans, \$1,045,204 of revenue loans, and \$33,332 of outstanding warrants. Special assessment loans were reported for seven cities and formed only a very small part of the debt of the state. Revenue loans made in anticipation of taxes were more common, appearing in all but three of the counties. Outstanding warrants amounted to even less than the special assessment debt, the greater portion of this class appearing in Allegany, Garrett, Howard, and St. Marys Counties.

MASSACHUSETTS.

The civil divisions of the state of Massachusetts reported an indebtedness less sinking fund assets amounting to \$187,578,004 in 1913. This amount was exceeded by only three other states—New York, Pennsylvania, and Ohio. The per capita debt of Massachusetts was \$52.86 in 1913, this amount being exceeded in New York, New Jersey, Washington, and California. Of the net debt the counties reported \$3,113,436, or 1.7 per cent, and all other civil divisions, including cities and towns, reported \$184,464,568, or 98.3 per cent of the total. The designation "town" in this state refers to that civil division common to all New England states, and is not used in the sense in which the term is commonly accepted. It will be noted that no school district debt is reported. This is due to the fact that the schools are conducted as a part of the municipality or town in which they may be located,

and are so closely related in their fiscal affairs as to make them practically inseparable.

The net debt reported for all civil divisions in 1913 shows an increase of \$43,779,099, or 30.4 per cent, over the amount reported in 1902, while during the period 1890 to 1902 the net debt increased \$69,516,227, or 93.6 per cent. The per capita debt during the period 1902 to 1913 increased \$3.01, or 6 per cent, and during the period 1890 to 1902 it increased \$16.67, or 50.2 per cent.

The counties of the state, as an individual unit, reported a total debt of \$3,113,436, of which \$2,922,115, or 93.9 per cent, represented funded or fixed debt, and \$191,321, or 6.1 per cent, revenue loans. It will be noted that neither special assessment loans nor warrants were reported. No sinking funds were held by the counties. There are 14 counties in Massachusetts. The city of Boston is charged with the administration of all matters originally administered by the county of Suffolk, including the payment of the indebtedness of that county. Such indebtedness in 1913 and 1902 is therefore included with that of the city of Boston, as shown in Table 6. Of the 13 remaining counties in the state 4 reported no debt. The largest debt was reported by Essex County, \$1,057,000, and the smallest by Dukes County, \$4,407. The smallest per capita debt, \$0.50, was reported by Berkshire County, and the largest, \$2.34, by Bristol County. The debt of all counties in 1913 showed an increase of \$252,490, or 8.8 per cent, over the amount reported in 1902, while the amount reported in the latter year was a decrease of \$1,190,884, or 29.4 per cent, from the amount reported in 1890. The per capita debt during the period 1902 to 1913 decreased \$0.14, or 11 per cent, while during the period 1890 to 1902 it decreased \$0.54, or 29.8 per cent. Although the net debt for all counties showed an increase of over a quarter of a million dollars, 7 of the 13 counties showed a decreased debt.

The cities and towns of the state reported a total debt of \$253,646,371 in 1913. Of this amount, \$244,538,643, or 96.4 per cent, represented funded or fixed debt; \$8,554,633, or 3.4 per cent, revenue loans; and \$553,095, or 0.2 per cent, warrants. Offsetting this debt these places reported \$72,708,911, or 28.7 per cent of the total debt, in sinking fund assets. The net debt amounted to \$180,937,460, an increase of \$42,478,248, or 30.7 per cent, over that reported in 1902. During the period 1890 to 1902 the net debt increased \$70,323,169, or 103.2 per cent. The per capita debt in 1913 was \$54.92. The per capita debt for these places as a group was not calculated for prior years.

Because of the fact that in many respects the Massachusetts towns very closely resemble and in many cases actually assume the functions of cities, they have been grouped with the cities in Table 6 of

Part III. The first group is composed of those cities and towns having a population of 30,000 or more. This group reported a net debt of \$146,117,776 in 1913, \$109,777,766 in 1902, and \$53,441,939 in 1890. The per capita debt in 1913 was \$65.85. The city of Boston is the largest city in the group and reported by far the largest debt. The net debt of this city was \$75,676,830 in 1913, an increase of \$19,917,096, or 35.7 per cent, over the amount reported in 1902. During the period 1890 to 1902 the increase amounted to \$27,584,238, or 97.9 per cent. The debt of this city was more than one-third of all the debt reported by all cities and towns in the state. Boston also reported the largest per capita debt in the state, \$104.75. Three cities in this group—Lowell, Newton, and Taunton—reported a decrease of debt from the amount reported in 1902. Ten cities in the group, however, reported a decrease in the per capita debt.

There were 48 places in the group of cities and towns having a population of 8,000 to 30,000. These places reported a net debt in 1913 amounting to \$24,890,741, an increase of \$3,722,056, or 17.6 per cent, over that reported in 1902. In 1902 these places reported an increase in net debt amounting to \$10,194,572, or 92.9 per cent, over the amount reported in 1890. Seventeen places in this group reported a reduction of net debt during the period 1902 to 1913, and 27 reported a reduction in the per capita debt. The net debt for individual places in this group ranged from \$1,868,767, reported by the city of Gloucester, which also reported the highest per capita debt, \$76.60, down to \$50,072, reported by Webster town, which place also reported the lowest per capita debt, \$4.04.

In the group having a population of 2,500 to 8,000 there were 81 towns which reported a total net debt in 1913 amounting to \$9,928,943, an increase of \$1,416,182 over the amount reported in 1902. During the period 1890 to 1902 the net debt of the places in this class increased \$4,792,770, or 128.8 per cent. The per capita debt for all places in this class was \$26.35 in 1913. There are no cities in Massachusetts having a population of less than 8,000. There were 29 towns in this group which reported a decrease in indebtedness during the period 1902 to 1913, while during the same period 35 towns reported a decrease in per capita debt. The net debt ranged from \$599,238, reported by the town of Swampscott, which also reported the highest per capita debt, \$96.59, down to \$1,603, reported by the town of Dalton, which also reported the lowest per capita debt, \$0.45.

The indebtedness of the towns having a population of less than 2,500 is reported in Table 7. These towns reported a total debt of \$3,000,838, of which \$2,477,170, or 82.5 per cent, represented funded or fixed debt; \$500,653, or 16.7 per cent, revenue and special assessment loans; and \$23,015, or 0.8 per cent, warrants. As an offset to the total debt these places

held sinking fund assets amounting to \$320,275, or 10.7 per cent of the total debt, leaving a net indebtedness of \$2,680,563. Fire districts, a class of divisions peculiar to New England states, reported a net indebtedness of \$846,545.

Summarizing the indebtedness of all civil divisions of the state as a single unit, it will be seen that the gross debt of these divisions was \$260,673,804 in 1913. Of this amount, \$250,803,776, or 96.2 per cent, represented funded or fixed debt; \$547,853, or 0.2 per cent, special assessment loans; \$8,745,954, or 3.4 per cent, revenue loans; and \$576,221, or 0.2 per cent, warrants. As an offset to their indebtedness the various divisions held sinking fund assets amounting to \$73,095,800, or 28 per cent of the total debt, leaving a net debt of \$187,578,004, or \$52.86 per capita.

MICHIGAN.

The total debt less sinking fund assets of the civil divisions of Michigan amounted to \$52,907,733 in 1913. Of this amount, the counties had incurred \$5,152,318, or 9.7 per cent; the cities, towns, villages, townships, etc., \$44,589,335, or 84.3 per cent; and the school districts, \$3,166,080, or 6 per cent. The net debt reported in 1913 shows an increase of \$24,635,372, or 87.1 per cent, over that reported in 1902. The per capita debt increased during this period \$6.60, or 57.8 per cent. During the period 1890 to 1902 the net debt increased \$16,638,727, or 143 per cent, while the per capita debt increased \$5.86, or 105.4 per cent. Of the three classes of divisions shown in Table 2, those places classified as "cities, towns, villages, townships, etc.," show the largest increase since 1902. This increase amounted to \$22,287,054, or 90.5 per cent of the total increase. Both counties and school districts also show material increases.

The counties of Michigan reported a total debt of \$5,539,402 in 1913. Of this amount, the funded or fixed debt was \$5,167,547, or 93.3 per cent; revenue loans amounted to \$351,542, or 6.3 per cent; and the outstanding warrants to \$20,313, or 0.4 per cent of the total debt. Sinking funds to the amount of \$387,084, or 7 per cent, were held as an offset to the total debt. The net debt of the counties in 1913 shows an increase of \$1,220,081, or 31 per cent, over the amount reported in 1902, while the per capita debt increased \$0.16, or 10.1 per cent, during this period. During the period 1890 to 1902 the net debt increased \$2,674,539, or 212.7 per cent, and the per capita debt increased \$0.99, or 165 per cent.

There are 83 counties in Michigan, and of this number, 53 reported debt in 1913. Eight of these reported only a small amount of outstanding warrants, and on the whole the counties are not heavily indebted. Wayne County, in which the city of Detroit is located, is the most notable exception, the total county debt amounting to \$2,506,000. The entire debt of this

county was in the form of general bonds, with sinking fund assets amounting to \$316,032, leaving a net debt of \$2,189,968. Kent County, in which the city of Grand Rapids is situated, reported a total debt of \$400,000, all in general bonds. Thirty-four counties show reductions in the amount of indebtedness from 1902 to 1913.

The cities, towns, and villages reported a total debt of \$48,058,270 in 1913. The funded or fixed debt amounted to \$41,051,838, or 85.4 per cent of the total. Special assessment and revenue loans amounted to \$6,820,387, or 14.2 per cent of the total, and outstanding warrants amounted to \$186,045, or 0.4 per cent of the total debt. Sinking funds were held amounting to \$5,540,051, or 11.5 per cent of the total debt. The net debt reported in 1913 shows an increase of \$20,924,379, or 96.9 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net debt increased \$13,531,698, or 167.8 per cent.

Among those cities having a population of 30,000 and over Detroit reported the largest debt, also the largest increase in the amount of debt over that reported in 1902. Kalamazoo reported the largest percentage of increase, closely followed by Flint. Each of these cities, however, reported only a nominal debt in 1902. The largest per capita debt, \$40.01, was reported by Saginaw. Only a very few of the cities in the two classes having from 2,500 to 8,000 and from 8,000 to 30,000 inhabitants show any reduction in indebtedness, the total increase in the former class amounting to \$4,657,405 and that in the latter amounting to \$3,263,562.

There were 357 incorporated places in Michigan in 1910 with a population of less than 2,500. Reports were secured from 332 of these places, and of this number, 186 reported a net debt aggregating \$3,385,437, an increase of \$620,636, or 22.4 per cent. The per capita debt for these places considered as a unit, based on the population of all places reporting, was \$12.67. In 1890 places in this class reported a net debt of only \$551,022. The amount reported by them in 1902 represented an increase of \$2,213,779, or 401.8 per cent.

The townships of Michigan are a very considerable factor in the fiscal transactions of the state, and are apparently becoming of more importance. These divisions reported a total debt in 1913 amounting to \$2,090,472. The funded or fixed debt amounted to \$1,765,771, or 84.5 per cent of the total. Revenue loans amounted to \$220,572, or 10.5 per cent, and outstanding warrants amounted to \$104,129, or 5 per cent of the total debt. Offsetting this debt were sinking funds amounting to \$69,356, or 3.3 per cent of the total. The net debt of these divisions in 1913 was \$2,021,116, and this amount represents an increase of \$1,312,675, or 185.3 per cent, over the amount reported in 1902.

As explained in the general text, the data presented for townships and similar civil divisions were secured by correspondence. The reports received from Michigan covered practically every township in the state and were generally satisfactory. In many cases the purpose for which the outstanding indebtedness had been incurred was reported, and this information would tend to indicate that a large percentage of the debt was incurred for the improvement of highways. Under an act of the legislature passed in 1905, counties, townships, or villages may be organized into road districts for the improvement and construction of highways, and on such highways as may be constructed the state pays "rewards" ranging from \$250 to \$1,000 for each mile constructed. This has undoubtedly encouraged the general improvement of highways within the state, and, in a measure, accounts for the largely increased debt of these divisions within the period covered by this bulletin. Operating under this plan, over 2,500 miles of road have been constructed in the state within the past few years.

In addition to the sum mentioned above, the Bureau of the Census received a report from a road district composed of Midland and Larkin Townships and Midland city in Midland County, which had issued bonds to the amount of \$50,000 for road building. There are probably other districts similarly organized, but, if so, they were not reported separately.

The independent school districts of the state reported a total net debt of \$3,166,080 in 1913, an increase of \$1,128,237, or 55.4 per cent, over the amount reported in 1902. The amount reported includes all classes of debt, no segregation having been made. It must be borne in mind that the amount stated does not represent the total debt of the civil divisions of the state on account of schools. As indicated by the footnote on Table 2, the amount shown is the total, by counties, for such places as were unincorporated or which, if incorporated, had a population of less than 2,500 in 1910. The debt shown for those cities having a population of 2,500 or more includes school debt.

Considering the indebtedness of all civil divisions of the state, except school districts, as a single unit, it is found that of the total amount, \$48,035,156, or 86.2 per cent, represented funded or fixed debt; \$5,793,532, or 10.4 per cent, special assessment loans; \$1,598,969, or 2.9 per cent, revenue loans; and \$310,487, or 0.5 per cent, outstanding warrants. As an offset to this amount all divisions held sinking funds amounting to \$5,996,491, or 10.8 per cent of the total debt, leaving a net debt of \$49,741,653.

MINNESOTA.

The total debt less sinking fund assets of the counties and other civil divisions of Minnesota was \$69,018,441 in 1913, an increase of \$30,089,737, or 77.3

per cent, over that of 1902. The debt for 1902 showed an increase of \$15,117,257, or 63.5 per cent, over the amount reported in 1890.

As shown in Table 2, the per capita debt increased from \$18.29 in 1890 to \$21.12 in 1902 and to \$31.64 in 1913, the rates of increase being 15.5 and 49.8 per cent, respectively, for the two periods.

Of the total net indebtedness of the various civil divisions within the state in 1913, the counties were responsible for 20.3 per cent; cities, villages, townships, and ditch districts, 69.5 per cent; and independent school districts, 10.2 per cent.

The gross county debt reported for 1913 was \$15,072,403. Of this amount, \$6,210,766, or 41.2 per cent, represented funded or fixed debt; \$7,576,245, or 50.3 per cent, special assessment debt, incurred mainly for establishing drainage systems; \$867,590, or 5.7 per cent, revenue loans; and \$417,802, or 2.8 per cent, outstanding warrants. The total assets of the various county sinking funds were reported as \$1,059,621, which offset 7 per cent of the total liabilities. Only one county in the state reported no liabilities. The per capita debt for the divisions of this class increased \$3.09, or 92.8 per cent, during the period from 1902 to 1913, and \$0.78, or 30.6 per cent, from 1890 to 1902. Hennepin County shows the largest total indebtedness, \$1,992,024, for 1913. The greater part, \$1,875,000, or 94.1 per cent, of this represented funded or fixed debt, issued principally for the purpose of building a courthouse; \$64,970, or 3.3 per cent, special assessment loans; and \$52,054, or 2.6 per cent, warrants. The sinking fund assets offsetting the above-mentioned liabilities amounted to \$835,778, or 42 per cent of the total indebtedness of the county. In 1913 the net debt of Hennepin County was \$1,156,246, having decreased \$302,326, or 20.7 per cent, from that of 1902. The per capita debt decreased \$2.60, or 45.3 per cent, during the same period. St. Louis County reported a gross debt of \$1,094,025 in 1913, ranking next after Hennepin County in amount of liabilities outstanding. Of this indebtedness, 91.1 per cent represented funded or fixed debt, issued principally to provide funds for building a courthouse and for bridge and road construction; 3.8 per cent, special assessment loans; and 5.1 per cent, outstanding warrants. The county held assets in the sinking funds of \$90,432, or 8.2 per cent of the gross debt. The net indebtedness of the county increased \$447,740, or 80.6 per cent, during the period from 1902 to 1913, while the per capita debt in 1913 was \$0.44, or 7.7 per cent, less than that in 1902. The gross debt of Marshall County in 1913 was \$1,087,066, nearly as great as that of St. Louis County, and consisted largely of bonds, issued for drainage purposes, to be met by special assessments against the individual property owners benefited. In 1913 the amount of these loans was reported as \$1,036,168, or 95.3 per cent of the total liabilities of the county.

The cities, towns, and villages in the state reported a gross debt of \$51,643,752 in 1913. More than 78.8 per cent of this amount was incurred by Duluth, Minneapolis, and St. Paul, the three cities of the state having a population of over 30,000 in 1913; 5.1 per cent by the nine cities having a population of 8,000 to 30,000; 10.6 per cent by those of 2,500 to 8,000; and 5.5 per cent by the villages and towns having less than 2,500 inhabitants in 1910. Minneapolis had a net debt of \$16,936,440 in 1913. This represented 36.5 per cent of the net indebtedness of all incorporated places in the state, and was an increase of \$9,917,548, or 141.3 per cent, over the amount reported for this city in 1902. The increase in net debt from 1890 to 1902 was \$598,125, or 9.3 per cent. The per capita debt decreased \$7.98, or 20.5 per cent, during the period from 1890 to 1902, and increased \$19.79, or 63.8 per cent, from 1902 to 1913. In the last-named year the per capita debt was \$50.79, or \$7.38 above the average for incorporated places in the state. Duluth and St. Paul show greater per capita debt than Minneapolis, \$81.06 and \$51.28, respectively, being reported for these two places in 1913. St. Paul reported a net debt in 1913 of \$11,872,795, an increase of \$2,970,372, or 33.4 per cent, over that of 1902; during the same period the per capita debt increased \$0.88, or 1.7 per cent. For 1913 Albert Lea reported the highest per capita debt, \$104.63, of all incorporated places in the state. The total indebtedness of this city was \$650,243, and of this amount, \$292,500 represented funded or fixed debt, consisting principally of state loans for school purposes; \$151,000, special assessment loans; and \$206,743, revenue loans. The sinking fund assets amounted to \$2,376.

Many of the towns and villages in the state having a population of less than 2,500 in 1910 failed to report for 1913, and the figures shown in Table 6 for this group of places represent the data for only 236 towns or villages. Seventy-nine reported no indebtedness, and 157 reported a combined net debt of \$2,793,280. The gross debt was \$2,858,256, consisting of funded or fixed debt obligations amounting to \$2,212,849; special assessment loans, \$91,535; revenue loans, \$221,262; and warrants, \$332,610. Twenty-three of the places reported sinking fund assets amounting to \$64,976, or 2.3 per cent of the total liabilities of all incorporated places of this size.

The amount shown in Table 2 as indebtedness of independent school districts does not represent the total liabilities in the state for school purposes, as the debt obligations incurred for schools by all cities having over 2,500 inhabitants in 1910 have been included as city liabilities. The total amount of independent school district debt, exclusive of city school debt as mentioned above, was \$7,057,523. The largest amount, \$642,453, or 9.1 per cent of the total, was reported by St. Louis County, followed by Itasca

County with \$523,230, or 7.4 per cent of the total. The figures for 1913 are not comparable with those shown in the report for 1902, when the indebtedness for school purposes of all cities and towns having a population of less than 8,000 inhabitants was shown as independent school district debt.

The townships in Minnesota reported a total indebtedness of \$1,529,427, the greater part, \$901,710, of this represented funded or fixed debt; \$267,018, loans to be met by special assessment; and \$360,699 was in the form of outstanding warrants. The total sinking fund assets reported by the various townships amounted to \$64,014. Ditch districts in Minnesota had a total indebtedness of \$21,631, all in the form of bonds, with no sinking funds provided therefor.

MISSISSIPPI.

Mississippi reported a total debt less sinking fund assets of \$24,167,861 in 1913. Of this amount, the counties were responsible for \$10,624,319, or 44 per cent; cities and towns, \$11,744,542, or 48.6 per cent; and the Yazoo and Mississippi Delta Levee District, \$1,799,000, or 7.4 per cent. The total debt less sinking fund assets shows an increase of \$18,641,065, or 337.3 per cent, over 1902, the debt of the latter year having increased \$3,018,458, or 120.3 per cent, over that of 1890. The per capita indebtedness for the years covered in Part III were: 1890, \$1.95; 1902, \$3.45, an increase of 76.9 per cent; 1913, \$12.88, an increase of 273.3 per cent. Comparison of these percentages shows that during both periods indebtedness increased more rapidly than the population.

The counties of Mississippi reported a total debt less sinking fund assets of \$10,624,319, an increase of \$8,901,891, or 516.8 per cent, over 1902. The increase from 1890 to 1902 was \$492,129, or 40 per cent. The per capita increase from 1902 to 1913 was \$4.59, or 429 per cent, and from 1890 to 1902, \$0.12, or 12.6 per cent.

The gross debt of the counties amounted to \$10,812,341, of which \$10,274,486 is classed as funded or fixed debt, \$424,555 as revenue loans, and \$113,300, as outstanding warrants. The bonded debt represented 95 per cent of the total; revenue loans, 3.9 per cent; and warrants outstanding, 1 per cent. Sixty-seven of the 79 counties in Mississippi reported bonded debt, 26 reported revenue loans, while 34 of them reported outstanding warrants. The total sinking fund assets held by the counties amounted to \$188,022, or 1.7 per cent of the total of such debt.

The gross debt of the cities, towns, and villages in Mississippi amounted to \$11,930,556 in 1913. Of this amount, \$10,551,138, or 88.4 per cent of the total, represented funded or fixed debt; \$893,597, or 7.5 per cent, special assessment loans; \$459,145, or 3.8 per cent, revenue loans; and \$26,676, or 0.2 per cent, outstanding warrants. Offsetting this debt were sinking

fund assets amounting to \$226,014, or 1.9 per cent of the total of such debt.

The net debt of the cities, towns, and villages for 1913 amounted to \$11,704,542, which represents an increase of \$7,900,174, or 207.7 per cent, while the increase from 1890 to 1902 amounted to \$2,526,329, or 197.7 per cent. The increase of debt was general among the cities of the various classes shown, every city in the state having a population of more than 2,500 reporting a material increase of debt. No per capita debt was calculated for these places for the years 1890 and 1902.

Of the places having a population of less than 2,500 reports were received from 272 out of a total of 311. Of the number reporting, 125 reported debt to the amount of \$2,399,143, with sinking fund assets to the amount of \$96,661, a net indebtedness per capita of \$15.31.

The "specified civil divisions" include all those places incorporated separately, and show a total debt amounting to \$1,839,000. This debt was incurred by levee and drainage districts for the protection of those counties bordering upon or within the limits of occasional inundation by the Mississippi River, the tax for their support being levied in the form of special assessments upon the land benefited.

No school district debt was reported for Mississippi, because of the fact that such debt is carried by the counties and municipalities in which the schools are located. While no tabulation has been made of the amount of school debt, an examination of the county and city reports shows a large percentage of them reporting debt on account of schools, and considerable amounts as outlays for new buildings. This is particularly true in many of the counties in which the population is largely rural.

MISSOURI.

The total debt less sinking fund assets of the counties and other civil divisions of Missouri was reported as \$56,951,123 in 1913. This was an increase of \$10,919,836, or 23.7 per cent over that of 1902. During the period from 1890 to 1902 the indebtedness of the civil divisions of the state increased \$6,233,551, or 15.7 per cent. The debt per capita decreased \$0.43, or 2.9 per cent, from 1890 to 1902, but increased \$2.56, or 17.8 per cent, from 1902 to 1913, and was \$16.98 in the last year. The net debt of the counties in 1913 was \$6,580,450, or 11.6 per cent of the total for the civil divisions of the state; the cities, towns, townships, etc., reported a debt of \$46,999,383, or 82.5 per cent; and the independent school districts, a debt of \$3,371,290, or 5.9 per cent of the total.

The gross debt reported by the counties of Missouri in 1913 was \$7,187,345. The greater part, \$5,421,725, or 75.4 per cent, represented funded or fixed debt; \$1,575,311, or 21.9 per cent, revenue loans; and \$190,-

309, or 2.6 per cent, warrants. Sinking funds for the amortization of the funded debt were reported by 31 counties in 1913, and the total assets of these funds amounted to \$606,895, offsetting 8.4 per cent of the gross liabilities. The net debt of 1913 was \$6,580,450, a decrease of \$2,468,923, or 27.3 per cent, from that of 1902. The debt reported for 1902 was \$1,190,709, or 11.6 per cent, less than that of 1890.

The per capita debt, which was \$4.60 in 1890, decreased \$1.11, or 24.1 per cent, from that year to 1902, and \$0.99, or 28.4 per cent, during the period from 1902 to 1913. Eighty-eight of the 114 counties in the state reported debt in 1913, although about one-fourth of these show merely nominal amounts. Jackson County reported a gross debt of \$954,132, which is more than that of any other county in the state, and represents 13.3 per cent of the total for these divisions. The liabilities of Jackson County consisted of \$248,000, or 26 per cent, funded or fixed debt obligations, and \$706,132, or 74 per cent, revenue loans. Macon County reported the next largest indebtedness, \$797,286. Of this amount, \$793,810, or 99.6 per cent, represented funded or fixed debt, and \$3,476, or 0.4 per cent, warrants. The sinking fund assets held by this county amounted to \$30,433, representing 3.8 per cent of its gross indebtedness.

The cities and towns reported gross liabilities of \$46,966,240 in 1913. Of this amount, \$44,947,002, or 95.7 per cent, represented funded or fixed debt; \$807,189, or 1.7 per cent, special assessment loans; \$385,983, or 0.8 per cent, revenue loans; and \$826,066, or 1.7 per cent, warrants. Offsetting this indebtedness, sinking funds, established by the majority of the cities and towns, held assets amounting to \$4,484,007, or 9.5 per cent of the gross debt. The 5 cities in the state having an estimated population of over 30,000 in 1913, reported a gross debt of \$39,113,659, or 83.3 per cent of the total for all incorporated places in the state; the 10 cities having a population of 8,000 to 30,000 reported total liabilities of \$2,337,648, or 5 per cent; the 46 cities having a population of 2,500 to 8,000 reported \$3,421,521, or 7.3 per cent; and the towns having a population of less than 2,500 reported \$2,093,412, or 4.5 per cent of the total for all cities and towns in the state. St. Louis reported total liabilities of \$24,790,926, or 52.8 per cent of the total for all incorporated places in Missouri. Of the total debt of St. Louis, \$24,386,691, or 98.4 per cent, represented funded or fixed debt, and \$404,235, or 1.6 per cent, warrants. The city held sinking fund assets of \$1,936,258, offsetting 7.8 per cent of the total debt. The per capita debt of St. Louis decreased \$9.11, or 19 per cent, from 1890 to 1902, and \$7.16, or 18.4 per cent, from 1902 to 1913. The city's per capita debt in 1913 was \$31.60, or \$8.19 greater than the average per capita debt of all cities and towns in the state. Kansas City ranked next to St. Louis in amount of

indebtedness, and in 1913 reported a net debt of \$9,474,716, or 22.3 per cent of the total for the cities and towns of the state. The total debt of Kansas City was \$11,266,714, consisting of \$10,372,000, or 92.1 per cent, funded or fixed debt; \$475,821, or 4.2 per cent, special assessment loans; \$79,923, or 0.7 per cent, revenue loans; and \$338,970, or 3 per cent, warrants. Assets amounting to \$1,791,998, or 15.9 per cent of the gross indebtedness, were held in the sinking funds established by the city for the amortization of the funded debt. The per capita debt of the city in 1913 was \$34.59, a decrease of \$2.86, or 7.6 per cent, from that of 1902.

In 1913 reports were received from 583 of the towns in Missouri having a population of less than 2,500 in 1910. Of this number, 438 reported no indebtedness and 145 reported a net debt of \$1,941,047, or \$5.55 per capita. In addition to the counties, cities, and towns, four other classes of civil divisions in Missouri had power to incur debt. In 1913 the total liabilities reported by these civil divisions were \$4,622,957, of which the townships were responsible for \$532,782, or 11.5 per cent; drainage districts, \$3,455,538, or 74.7 per cent; levee districts, \$84,234, or 1.8 per cent; and road districts, \$550,403, or 11.9 per cent of the total for the four divisions. Offsetting this indebtedness, sinking funds established by the townships and districts held assets of \$105,807, or 2.3 per cent of the gross debt.

The school district debt reported for Missouri in 1913 amounted to \$3,371,290. This does not represent the total debt of the civil divisions of the state for schools, as the debt incurred for school purposes by the cities of over 2,500 inhabitants was included with the city liabilities. In 1902 the school debt of all cities having a population of less than 8,000 was shown as independent school district debt, and for that reason the figures for 1913 and 1902 are not strictly comparable.

MONTANA.

The net debt reported by the counties and minor civil divisions of Montana for the year 1913 was \$16,633,154, an increase of \$8,916,234, or 115.5 per cent, over the amount reported for 1902. During the period 1890 to 1902 the indebtedness of these divisions increased \$4,965,842, or 180.5 per cent. The debt of these civil divisions in 1913 was more than six times larger than in 1890, but owing to the rapid growth of the population the per capita debt did not quite double during that period, being \$20.82 in 1890, \$29.30 in 1902, and \$39.68 in 1913. The per capita debt increased \$8.48, or 40.7 per cent, from 1890 to 1902, and \$10.38, or 35.4 per cent, during the period from 1902 to 1913. The debt of the counties represented 39 per cent of the net indebtedness of all civil divisions in Montana; that of cities and towns, 54 per cent; and that of independent school districts, 7 per cent.

In 1913 the gross debt of the counties in the state was \$6,983,485. Of this amount, \$5,592,385, or 80.1 per cent, represented funded or fixed debt; \$1,237,840, or 17.7 per cent, revenue loans; and \$153,260, or 2.2 per cent, outstanding warrants. Twenty-five of the 31 counties having indebtedness in 1913 had provided sinking funds for the amortization of bonds, the total amount of securities and moneys held by these funds being \$491,358, or 7 per cent of the gross indebtedness. On account of boundary changes and the organization of new counties, the data for the individual counties are, in many instances, not comparable with the figures shown for the earlier years. These changes in area also account for the fluctuations of the total and per capita debt as shown for several of the counties in Table 4. The state constitution provides that when a new county is established it shall be held to pay its ratable proportion of all the then existing liabilities, less the ratable proportion of the value of the property of the county or counties from which it was formed. While the net debt of the counties increased \$2,071,362, or 103.3 per cent, from 1890 to 1902, and \$2,416,252, or 59.2 per cent, from 1902 to 1913, the per capita debt is practically the same for the three years shown and is higher than that of any other state.

Of the 31 counties of the state which reported debt, the older counties in the southern and western sections reported the larger amounts. The good roads movement has taken a firm hold in Montana, and a large part of the money raised from the issue of debt obligations has been used in building bridges and improving highways.

Silver Bow, one of the smallest counties in area, reported the largest indebtedness in 1913, \$715,876. Of this amount, \$690,000 was general bonds issued for the purpose of building a courthouse, and \$25,876 was interest bearing warrants or revenue loans. Offsetting this indebtedness the county had assets in the sinking fund amounting to \$65,847, or 9.2 per cent of the gross debt. The per capita debt was \$10.86, or \$4.63 less than the average for the state. Cascade County ranked second with a gross debt of \$576,980, of which \$566,000 was general bonds and \$10,980 was outstanding warrants. A large part of the proceeds from the bonds was expended for road improvements. The county held sinking fund assets of \$50,306, or 8.7 per cent of the total liabilities, for the retirement of the bonds. The per capita indebtedness decreased \$4.52, or 20.4 per cent, during the period from 1902 to 1913, but it is still \$2.17 above the state average. Lincoln County, which was organized from part of Flathead County in 1909, shows the highest per capita debt of any county in the state, \$54.06. The total liabilities of this county were \$246,105, of which amount \$211,000 was general bonds, more than one-half of which was issued for the purpose of building bridges and improving roads. The county sinking fund had assets amounting to \$12,193,

or 5 per cent of the total liabilities. The per capita debt of Granite County was \$47.93 in 1913, and that of Sanders County was \$45.22. The first-named county reported a total indebtedness of \$145,063, consisting of \$50,000 in general bonds and \$95,063 in revenue loans. The sinking fund assets were \$4,053. Sanders County had liabilities amounting to \$216,711, of which amount \$161,962 represented funded debt and \$54,749, revenue loans. The assets in the sinking fund offsetting indebtedness amounted to \$22,164. The smallest per capita debt shown for any county in the state in 1913 was \$5.77, for Powell County. The liabilities of this county consisted of general bonds, \$36,000, and revenue loans, \$457, with sinking fund assets of \$1,498.

The total debt reported by the cities and towns in Montana in 1913 amounted to \$9,446,830. Of this amount, \$5,715,860, or 60.5 per cent, represented funded or fixed debt; \$2,112,036, or 22.4 per cent, special assessment loans; \$1,548,887, or 16.4 per cent, revenue loans; and \$70,047, or 0.7 per cent, outstanding warrants. A majority of the cities reported sinking funds, the assets amounting to \$462,560 in 1913, offsetting 4.9 per cent of the gross indebtedness.

The net debt of the cities and towns increased \$5,937,044, or 194.8 per cent, during the period 1902 to 1913, and \$2,432,707, or 395.9 per cent, from 1890 to 1902. In 1890 there were 19 incorporated places in the state; in 1902 there were 26; and in 1910, 57. The establishing of new cities accounts, to a large extent, for the rapid increase in this class of indebtedness. It will be noted, however, that all of the cities shown separately in Table 6 reported increases in their indebtedness for the two periods covered. The net per capita debt for all incorporated places in the state was \$51.07 in 1913.

Butte, the only city in the state having a population in excess of 30,000, reported a gross debt of \$1,486,248, of which \$568,960 represented funded or fixed debt; \$200,181, special assessment loans; \$716,569, revenue loans; and \$538, warrants. The sinking fund assets reported by this city amounted to \$294,377, or 63.6 per cent of the assets of sinking funds reported by all incorporated places in the state. The net debt of this city shows an increase of \$632,913, or 113.2 per cent, in 1913 over that in 1902. The per capita indebtedness in 1913 was \$28.96, an increase of \$13.50, or 87.3 per cent, over that of 1902, but the per capita debt was \$22.11 less than the average of such debt for all incorporated places in the state.

A large part of the indebtedness of Montana cities was incurred for the purpose of installing water-supply systems and for schools. In 1913 Helena reported the largest net indebtedness of any city in the state, having exchanged places with Great Falls since 1902. The per capita debt of Helena increased \$25.59, or 79 per cent, during the period from 1890 to 1902, and \$54.30, or 93.7 per cent, from 1902 to 1913.

The highest per capita debt in 1913, \$137.52, is shown for Lewiston. This is an increase of \$93.03, or 209.1 per cent, over that of 1902. Anaconda reported the lowest per capita debt, \$25.74. This is an increase of \$3.68, or 16.7 per cent, over that of 1902, and of \$14.39, or 187.6 per cent, during the period from 1890 to 1902. Reports were obtained from all but one of the total number of incorporated places in the state having a population of less than 2,500 in 1910. Thirteen reported no indebtedness, and the other 29 reported a gross debt of \$1,165,633, the amount reported from each town ranging from \$2,000 for Virginia City to \$156,032 for Chinook town. The sinking fund assets reported by these places amounted to 3.9 per cent of the gross indebtedness.

The independent school district debt reported for Montana amounted to \$1,156,757 in 1913. This does not represent the total indebtedness of the subdivisions of the state for school purposes, as the school debt of cities and towns of over 2,500 inhabitants is included with the city or town liabilities. The figures shown for 1913 are not comparable with the report for 1902, for which year the indebtedness for school purposes of all cities and towns having a population of less than 8,000 inhabitants was shown as independent school district debt. The data for 1913 show 25 counties out of the 31 as having incurred indebtedness for this purpose. The largest amounts were reported for Fergus and Silver Bow Counties, which reported 10 per cent and 9.5 per cent, respectively, of the total school indebtedness.

NEBRASKA.

The civil divisions of the state of Nebraska reported a total net indebtedness of \$36,371,067 in 1913. Of this amount, the counties, as a separate unit, were obligated for \$3,706,128, or 10.2 per cent; the cities, towns, villages, townships, etc., were obligated for \$29,049,052, or 79.9 per cent; and the independent school districts, for \$3,615,887, or 9.9 per cent of the total. The amount reported in 1913 was an increase of \$15,961,027, or 78.2 per cent, over the amount reported in 1902, the indebtedness in the latter year showing an increase of \$5,127,147, or 33.5 per cent, over that in 1890. The per capita debt in 1913 was \$29.50, having increased \$10.37, or 54.2 per cent, from 1902 to 1913. During the period 1890 to 1902 the per capita debt increased \$4.70, or 32.6 per cent. During the period 1890 to 1902 the per capita debt of all civil divisions increased at about the same rate as the net debt, while during the period 1902 to 1913 the rate of increase for the net debt was very much in excess of the rate of increase of the per capita debt.

The counties of the state reported a total debt of \$3,854,472, of which \$3,580,266, or 92.9 per cent, represented funded or fixed debt, nearly all of which was in the form of general bonds; \$203,778, or 5.3 per

cent, revenue loans; and \$70,428, or 1.8 per cent, warrants. The sinking funds held by the counties amounted to \$148,344, or 3.1 per cent of their total debt. The net debt reported in 1913 was a decrease of \$1,075,830, or 22.5 per cent, from the amount reported in 1902, the last-mentioned year showing a decrease of \$728,217, or 13.2 per cent, from the amount reported in 1890. The per capita debt decreased from \$5.20 in 1890 to \$4.48 in 1902, and \$3.01 in 1913, the rate of decrease in both periods being in excess of the rate of decrease for the net debt, although the rates for the period 1890 to 1902 were very nearly the same.

There were 92 counties in the state in 1913, and of this number, 41 reported debt. The smallest debt, amounting to \$1,000, was reported by Perkins County. The largest debt, amounting to \$1,896,656, was reported by Douglas County, in which the city of Omaha is located. The smallest per capita debt, \$0.07, was reported by Saline County, where the total debt was only \$1,250, while the largest per capita debt, \$14.23, was reported by Otoe County, with a total debt of \$275,000. During the period 1902 to 1913, 37 counties paid off the entire debt outstanding in 1902, while only 5 counties which were free from debt in that year reported debt in 1913. Douglas County, mentioned above as being the largest individual debtor, reported more than one-half of the debt of all counties, and showed an increase during the period 1902 to 1913 of \$899,655, or 90.2 per cent.

The cities, towns, and villages of the state reported a total debt of \$29,393,041 in 1913. Of this amount, \$24,610,319, or 83.7 per cent, represented funded or fixed debt; \$3,869,189, or 13.2 per cent, special assessment loans; \$296,716, or 1 per cent, revenue loans; and \$616,817, or 2.1 per cent, warrants. These places held sinking fund assets in 1913 amounting to \$845,327, or 2.9 per cent of the total debt. The net debt reported in 1913 was \$28,547,714, an increase of \$16,335,641, or 133.8 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net debt of the incorporated places increased \$6,228,936, or 104.1 per cent. The per capita debt for all incorporated places was \$51.61 in 1913. The per capita debt for prior years was not calculated.

The cities of Lincoln and Omaha make up the group of cities having a population of 30,000 or more, and together reported a net debt of \$18,042,106. The city of Omaha was obligated for \$16,052,451, an increase of \$9,626,671, or 149.8 per cent, over the amount reported in 1902. During this period the per capita debt increased \$63.91, or 109.2 per cent. During the period 1890 to 1902 the net debt of Omaha increased \$4,609,680, or 253.8 per cent, while the per capita debt increased \$45.61, or 352.7 per cent. This is one of the very few cases in which the rate of increase was larger for the per capita than for the net debt.

The group composed of cities having a population of 8,000 to 30,000 reported a net debt of \$3,813,385, an increase over that of 1902 of \$2,088,135, or 121 per cent. Each city in this group reported an increase in net debt, the largest increase having been reported by South Omaha. The cities of Beatrice and Hastings reported a small increase in net debt and a decrease in the per capita debt.

The next group includes 20 cities ranging in population from 2,584 to 6,235. These places reported a net debt of \$2,879,885, an increase of \$1,733,418, or 151.2 per cent, over the amount reported in 1902.

There were 427 incorporated places in the state with a population of less than 2,500 in 1910. Of this number, 405 made reports to the Census Bureau. Of these, 231 reported debt aggregating \$3,812,338, an increase of \$2,674,154, or 234.9 per cent, and a per capita debt of \$16.48, basing the per capita on the population of all places reporting.

The "specified civil divisions" shown in Table 7 include drainage districts and townships. The drainage districts reported a total indebtedness of \$420,097, all of which was special assessment loans. No sinking funds were reported by these districts. The townships reported a total debt of \$81,785, of which \$31,176 represented funded or fixed debt; \$8,221, special assessment loans; and \$42,388, outstanding warrants. Sinking funds amounting to \$544 were reported, leaving a net debt of \$81,241.

The independent school districts of the state reported a net debt of \$3,615,887 in 1913, an increase of \$1,384,105, or 62 per cent, over the amount reported in 1902. This amount does not represent the entire indebtedness of the state on account of schools, but only the debt of those divisions which lie outside the boundaries of those cities and towns having a population of 2,500 or more.

The civil divisions of the state, excepting school districts, reported a gross indebtedness amounting to \$33,749,395, of which \$28,221,761, or 83.6 per cent, represented funded or fixed debt; \$4,297,507, or 12.7 per cent, special assessment loans; \$500,494, or 1.5 per cent, revenue loans; and \$729,633, or 2.2 per cent, warrants. As an offset to this debt the civil divisions reported sinking fund assets amounting to \$994,215, or 2.9 per cent of the total debt, leaving a net debt of \$32,755,180, to which should be added the debt of independent school districts, \$3,615,887, giving a total net debt of \$36,371,067, or \$29.50 per capita.

NEVADA.

The civil divisions of the state of Nevada reported a total debt less sinking fund assets amounting to \$2,575,407 in 1913. Of this amount, the counties were obligated for \$1,292,228, or 50.2 per cent; the cities, towns, villages, etc., for \$931,184, or 36.2 per cent; and the independent school districts, for \$351,995,

or 13.6 per cent. The net debt reported in 1913 was an increase of \$1,635,122, or 173.9 per cent, over the amount reported in 1902 while the amount reported in 1902 was an increase of \$112,309, or 13.6 per cent, over the amount reported in 1890. During the period 1902 to 1913 the per capita debt increased \$4.98, or 22.4 per cent, and during the period 1890 to 1902 it increased \$4.12, or 22.2 per cent.

The total debt reported by the counties of the state amounted to \$1,340,597, of which \$1,111,400, or 82.9 per cent, represented funded or fixed debt; \$225,691, or 16.8 per cent, revenue loans; and \$3,506, or 0.3 per cent, outstanding warrants. As an offset to this debt sinking funds were held by counties amounting to \$48,369, or 3.6 per cent of the total debt, leaving a net debt of \$1,292,228. The per capita debt reported for the counties shows a very unusual feature in that during the period 1890 to 1902 it showed an increase of \$2.58, or 14.5 per cent, while during the same period the net debt increased only 6 per cent. During the period 1902 to 1913 the per capita debt decreased \$6.70, or 32.9 per cent, while during the same period the net debt increased \$431,075, or 50.1 per cent.

Each county in the state reported debt in 1913, although that of two counties—Eureka and Storey—consisted of only a very small amount of outstanding warrants. Three counties reported no funded debt. The largest debt was reported by Clark County, and amounted to \$261,000. This county also showed the largest per capita debt, \$67.27. The smallest funded debt, \$15,000, was reported by Mineral County. The lowest per capita debt was reported by Storey County, and amounted to \$0.06.

Nevada shares with New Mexico the distinction of having the debt of the counties exceed that of the cities, these two states being the only ones in which this condition exists. The cities of Nevada reported a total debt in 1913 amounting to \$931,761. Of this amount, \$776,739, or 83.3 per cent, represented funded or fixed debt; \$150,750, or 16.2 per cent, special assessment loans; and \$4,272, or 0.5 per cent, revenue loans. No outstanding warrants were reported by cities. The cities of Nevada held as sinking fund assets only \$577; and this amount was reported in the group of places having a population of less than 2,500. Reno, with a population of 12,934, the largest city in the state, reported a net debt of \$654,314, an increase of \$623,314, or 2,010.7 per cent, over the amount reported in 1902. The per capita debt for Reno was \$50.59 in 1913, having increased \$43.70, or 634.3 per cent, over that of 1902. The city of Sparks, with a population of 2,500, was the second city in size in the state. This city reported a net debt of \$74,000, a per capita debt of \$29.60.

There were six incorporated places in the state having a population of less than 2,500 in 1910, and these reported a net debt of \$202,870, an increase of

\$180,738, or 816.6 per cent, over the amount reported in 1902. The per capita debt for these places was \$30.42 in 1913.

The school district debt was \$351,995, an increase of \$325,995, or 1,253.8 per cent, over the amount reported in 1902. The statements made for other states concerning school debt are applicable to Nevada. If school districts are excepted, the civil divisions of Nevada taken as a whole reported a total debt of \$2,272,358, of which \$1,888,139, or 83.1 per cent, represented funded or fixed debt; \$150,750, or 6.6 per cent, special assessment loans; \$229,963, or 10.1 per cent, revenue loans; and \$3,506, or 0.2 per cent, outstanding warrants. Sinking funds amounting to \$48,946, or 2.2 per cent of the total debt, were held by all divisions, leaving a net debt of \$2,223,412, to which should be added the debt of school districts, which is assumed to be net, making a total net debt for all divisions amounting to \$2,575,407, or \$27.19 per capita debt.

NEW HAMPSHIRE.

The civil divisions of the state of New Hampshire reported an indebtedness less sinking fund assets amounting to \$9,344,558. Of this amount, the counties were obligated for \$488,234, or 5.2 per cent; the cities, villages, towns, etc., for \$8,375,579, or 89.6 per cent; and the independent school districts, for \$480,745, or 5.1 per cent of the total debt. The net debt reported in 1913 represented a decrease of \$517,528, or 5.2 per cent, from the amount reported in 1902. The per capita debt during this period decreased \$2.16, or 9.2 per cent, almost double the rate of decrease in the net debt. During the period 1890 to 1902 the net debt of all civil divisions increased \$4,404,743, or 80.7 per cent, while the per capita debt increased \$9.07, or 62.6 per cent.

New Hampshire is the only state which reported a decrease in the total net indebtedness. The cities and towns reported a slight increase in the net debt, but this was more than offset by the reduction of debt in the counties.

The counties of the state reported a gross debt of \$662,110, of which \$559,800, or 84.5 per cent, represented funded or fixed debt; \$100,000, or 15.1 per cent, revenue loans; and \$2,310, or 0.3 per cent, warrants. Against this total debt sinking fund assets were reported, amounting to \$173,876, or 26.3 per cent of the total debt. Sinking funds were reported by only two counties. Belknap County reported \$54,871, which amount was \$4,871 in excess of the indebtedness of that county, and Hillsborough County reported \$119,005, almost one-third of the total debt of the county. The net debt reported for all counties was \$488,234, which was a decrease of \$364,899, or 42.8 per cent, from the amount reported in 1902. The net debt in 1902 was \$853,133, an increase of \$296,146, or 53.2 per cent, over the amount reported in 1890. None

of the counties reported special assessment loans in 1913, and only three reported outstanding warrants. The total of this class of debt was only \$2,310 for all counties. The per capita debt of the counties in 1913 was \$1.12, a decrease during the period 1902 to 1913 of \$0.92, or 45.1 per cent, while during the period 1890 to 1902 the per capita debt increased \$0.56, or 37.8 per cent.

The incorporated places in New Hampshire reported a total debt in 1913 amounting to \$9,365,635. Of this amount, \$8,323,711, or 88.9 per cent, represented funded or fixed debt; \$946,333, or 10.1 per cent, revenue loans; and \$95,591, or 1 per cent, warrants. No debt to be paid from special assessments was reported. The various cities and towns held a total of \$1,862,202, or 19.9 per cent of the total debt, in sinking fund assets. The net debt reported in 1913 was \$7,503,433, an increase of \$209,241, or 2.9 per cent, over the amount reported in 1902. The per capita debt in 1913 was \$28.54. The per capita debt was not computed for other years considered in this report. During the period 1890 to 1902 the net debt of these civil divisions increased \$3,665,969, or 101 per cent.

Manchester was the only city in the state having a population in excess of 30,000 in 1913. This city reported a net debt in that year of \$1,165,841, a decrease of \$364,392, or 24.8 per cent, from the amount reported in 1902. The amount reported in 1902 shows an increase of \$584,283, or 61.8 per cent, over that reported in 1890. From 1890 to 1913 the per capita debt of Manchester decreased \$5.75, or 26.8 per cent.

Of the eight cities comprising the group having a population of 8,000 to 30,000, three reported a decrease in the net indebtedness during the period 1902 to 1913, and seven of the eight reported a decrease in the per capita debt during the same period. On the other hand, seven of the eight cities reported an increase in the per capita debt during the period 1890 to 1902. The largest individual debtor in this group was Concord, which, while increasing its net debt slightly, shows a decrease in the per capita debt from 1902 to 1913.

The third group is made up principally of towns, which reported a net indebtedness in 1913 amounting to \$2,381,691, an increase of \$695,246, or 41.2 per cent, over the amount reported in 1902. Of the 18 places in this group, 10 reported an increase in the net debt since 1902 and 9 places reported an increase in the per capita debt.

The largest per capita debt shown by a city or town was reported for the city of Portsmouth and amounted to \$71.79, a decrease in the per capita indebtedness of that city of \$8.96 from that reported in 1902.

As shown in Table 7, towns having a population of less than 2,500 in 1910 reported a net debt in 1913

of \$872,146. No comparable data for prior years for places of this class are available.

The independent school districts of New Hampshire reported a net debt in 1913 amounting to \$480,745. In prior years this indebtedness was considered as a part of the city or county debt and was not shown separately. For the year of this report, however, the indebtedness on account of schools of those cities and towns having a population of more than 2,500 is included with the debt of the city or town.

If all divisions of the state, except school districts, are considered as a single unit, it will be seen that these divisions reported a total indebtedness amounting to \$10,944,065. Of this amount, \$9,472,866, or 86.6 per cent, represented funded or fixed debt; \$1,371,014, or 12.5 per cent, revenue loans; and \$100,185, or 0.9 per cent, outstanding warrants. Against this total all divisions held sinking funds amounting to \$2,080,252, or 19 per cent of the total debt, leaving a net debt of \$8,863,813, to which should be added the indebtedness of the independent school districts, which is assumed to be net and of which no segregation was made by class, bringing the total net debt up to \$9,344,558, a per capita debt of \$21.40.

NEW JERSEY.

The civil divisions of New Jersey reported a net debt in 1913 amounting to \$169,527,120, of which the counties had incurred \$33,809,447, or 19.9 per cent; the cities, towns, boroughs, villages, etc., had incurred \$126,735,949, or 74.8 per cent; and the school districts had incurred \$8,981,724, or 5.3 per cent of the total. The amount reported was an increase of \$88,323,361, or 108.8 per cent, over the amount reported in 1902, while the latter year showed an increase of \$32,892,812, or 68.1 per cent, over the amount reported in 1890. The per capita debt during the period 1902 to 1913 increased \$20.81, or 50.9 per cent, less than one-half the rate of increase for the net debt. During the period 1890 to 1902 the per capita debt increased \$7.42, or 22.2 per cent, less than one-third the rate of increase for the net debt. During the period covered by this bulletin the per capita debt for all civil divisions of the state increased 84.4 per cent. Only four states—New York, Pennsylvania, Ohio, and Massachusetts—reported a net debt in excess of that reported by New Jersey, and only two states—New York and Washington—reported a higher per capita debt.

The counties of New Jersey reported a total debt amounting to \$38,803,091, of which \$36,603,948, or 94.3 per cent, represented funded or fixed debt; \$2,108,653, or 5.4 per cent, revenue loans; and \$90,490, or 0.2, outstanding warrants. Against this sum the counties held sinking funds aggregating \$4,993,644, or 12.9 per cent of the total debt. The net debt of all counties in 1913 was \$33,809,447, an increase of \$21,356,964, or 171.5 per cent, over the amount re-

ported in 1902. During the period 1890 to 1902 the net debt increased \$8,724,353, or 234 per cent. The per capita debt of the counties of New Jersey, \$12.30, is comparatively high, being exceeded only by that of two states—Montana and Nevada. The amount reported in 1913 shows an increase of \$6.04, or 96.5 per cent, over the amount reported in 1902, while the amount reported in 1902 is \$3.68, or 142.6 per cent, in excess of the amount reported in 1890. No other state reported a total county debt equal to that reported by New Jersey, although Ohio and Pennsylvania both reported county debt in excess of \$30,000,000, an unusually large amount.

Hudson and Essex Counties are the largest debtors, the former county reporting a net debt of \$12,180,055, and the latter a net debt of \$10,595,803. Hudson County shows the greatest increase during the period 1902 to 1913, and the largest per capita debt, \$20.77. None of the counties reported special assessment loans and only two—Atlantic and Burlington—reported outstanding warrants. Those counties which reported the largest debt generally reported substantial amounts held in their sinking funds.

As shown above, the cities, towns, boroughs, and villages of New Jersey have incurred the largest portion of the indebtedness of the civil divisions of the state, the total debt reported by these places amounting to \$152,960,004 in 1913. Of this amount, \$127,851,259, or 83.6 per cent, represented funded or fixed debt; \$9,525,397, or 6.2 per cent, special assessment loans; \$14,264,653, or 9.3 per cent, revenue loans; and \$1,318,695, or 0.9 per cent, outstanding warrants. Against this total debt these places held sinking fund assets amounting to \$28,211,417, or 18.4 per cent of the total debt, leaving a net debt of \$124,748,587. This net debt represents an increase of \$59,704,997, or 91.8 per cent, over the amount reported in 1902; while during the period 1890 to 1902, the net debt of incorporated places increased \$22,556,821, or 53.1 per cent. The per capita debt for all incorporated places was \$56.60 in 1913. The per capita debt was not calculated for prior years.

There were 14 cities in New Jersey with a population in excess of 30,000 in 1913. These 14 cities reported a net debt in 1913 amounting to \$90,663,452, an increase of \$36,746,214, or 68.2 per cent, over the amount reported in 1902. The amount reported in 1902 was in excess of the amount reported in 1890 by \$16,359,031, or 43.6 per cent. The per capita debt for this group was \$61.13 in 1913. The per capita debt was not calculated for cities in this group for prior years.

Newark, the largest city in the state, reported the largest net debt, \$27,353,912, with a per capita debt of \$72.13, closely followed by Jersey City, with a net debt of \$23,326,446, or a per capita debt of \$81.08; both of these cities reporting a per capita debt well

above the average for the group. The highest per capita in this group, \$119.57, was reported by Atlantic City, which ranked third in amount of net debt reported. Two cities in this group—Bayonne and Elizabeth—reported a decrease in per capita debt from the amounts reported in 1902, the latter city also reporting a decrease in net debt. The city of East Orange shows the highest percentage of increase in both net and per capita debt, the increase in the net debt amounting to 302.8 per cent, while the per capita debt increased 140.1 per cent.

In the second group, including all cities having a population of 8,000 to 30,000, there are 22 cities which reported a total net debt of \$15,688,784, an increase of \$9,223,834, or 142.7 per cent, over the amount reported in 1902. The largest debt shown in this group was \$1,373,569, reported by Asbury Park, which city also reported the highest per capita debt in the group, \$113.13, more than twice the average for the group. The lowest per capita debt in this group was reported by the city of Millville, which, with a population larger than that of Asbury Park, reported a per capita debt of only \$10.15.

In the next population group, including those cities and boroughs having a population of 2,500 to 8,000, there were 52 places which reported a total net debt of \$12,231,157, an increase of \$9,490,153, or 346.2 per cent, over the amount reported in 1902. In this group appears the highest per capita debt shown in the state, that of the city of Edgewater, with a population of 2,655, showing a net debt of \$555,880, or a per capita debt of \$209.37. This city had not been organized in 1890, and reported no debt in 1902. Five cities of this class reported a debt in excess of \$500,000, the largest net debt, \$982,681, being reported by South Orange.

For those places having a population of less than 2,500 the data here shown were taken from state reports. Out of the 152 incorporated places in this class, as reported by the census of 1910, 106 reported a net debt aggregating \$6,165,214, a per capita debt of \$41.93. The amount reported shows an increase of \$4,244,796, or 221 per cent, over that reported in 1902.

One very noticeable feature of the reports of the New Jersey cities is the absence of outstanding warrants in most of the cities. The comparatively small amount of special assessment loans is also worthy of note, this being particularly true of the smaller places.

The "specified civil divisions" in New Jersey include only townships. These divisions reported a total net debt in 1913 amounting to \$1,987,362, an increase of \$729,393, or 58 per cent, over the amount reported in 1902. The townships bore only 1.2 per cent of the net debt of all divisions of the state in 1913.

The independent school districts of the state reported a net debt of \$8,981,724 in 1913, an increase of

\$6,532,007, or 266.6 per cent, over the amount reported in 1902. The total shown here is not the total indebtedness of the state on account of schools, since the debt on account of schools in those cities having a population of more than 2,500 is included as a part of the city debt.

Considering all the civil divisions of the state, exclusive of school districts, as a single unit, the total debt in 1913 amounted to \$193,923,495. Of this amount, \$166,014,520, or 85.6 per cent, represented funded or fixed debt; \$9,525,397, or 4.9 per cent, special assessment loans; \$16,974,393, or 8.8 per cent, revenue loans; and \$1,409,185, or 0.7 per cent, outstanding warrants. As an offset to this debt all civil divisions reported sinking fund assets amounting to \$33,378,099, leaving a net debt of \$160,545,396. To this amount should be added the indebtedness of the independent school districts, which indebtedness is assumed to be net, making a total net debt of \$169,527,120, a per capita debt of \$61.66.

NEW MEXICO.

The civil divisions of New Mexico reported a total debt less sinking fund assets amounting to \$6,444,012 in 1913. Of this amount, the counties were responsible for \$3,054,640, or 47.4 per cent; cities, towns, and villages, \$2,099,592, or 32.6 per cent; irrigation districts, \$258,777, or 4 per cent; and school districts \$1,031,003, or 16 per cent.

The total debt less sinking fund assets was \$3,580,593 in 1902 and \$1,961,538 in 1890. During the period 1890 to 1902 the total debt increased \$1,619,055, or 82.5 per cent; and during the period 1902 to 1913, \$2,863,419, or 80 per cent. During the first-mentioned period the debt increased at a more rapid rate than the population, the per capita debt increasing from \$12.77 in 1890 to \$17.70 in 1902. Although the total debt increased 80 per cent during the period 1902 to 1913, the per capita debt shows a slight decrease, for the reason that the population of the state increased 83 per cent during the same period.

The counties of New Mexico reported a gross indebtedness of \$3,063,512, of which \$3,015,976 was in the form of funded or fixed debt and \$47,536 was in the form of outstanding warrants. Offsetting the total debt were sinking fund assets to the amount of \$8,872, leaving a net debt for the counties in 1913 of \$3,054,640, a per capita of \$8.25. The net debt of counties reported for 1902 was \$2,965,905, with a per capita of \$14.66. In 1890 the net debt was \$1,815,083, a per capita of \$11.82. While the net debt in 1913 shows an increase of 3 per cent over that of 1902, the per capita debt shows a decrease during that period of \$6.41, or 77.7 per cent. During the period 1890 to 1902 the net debt shows an increase of \$1,150,822, or 63.4 per cent, while the per capita debt increased \$2.84, or 24 per cent.

Every county in the state reported indebtedness in 1913. Because of the fact that several new counties were organized between 1902 and 1913, the total number being increased by five, the data presented in the tables of Part III of this report are not strictly comparable, for individual counties, with those published in former years. The debt reported was fairly uniform over the state and in the majority of the counties was incurred for permanent improvements necessitated by the organization of the local government.

The cities, towns, and villages reported a total indebtedness of \$2,101,392, of which \$1,954,822 is classed as funded or fixed debt, \$126,371 as special assessment and revenue loans, and \$20,199 as outstanding warrants. Against this amount were sinking funds amounting to only \$1,800, which amount was held by the town of Artesia toward the redemption of a \$50,000 bonded debt.

All of the cities having a population in excess of 2,500 reported debt, and all reported material increases. Albuquerque, the only city in the state with a population in excess of 8,000, shows a funded or fixed debt of \$647,000, an increase of \$480,209, or 287.9 per cent, since 1902. The per capita debt increased \$24.72, or 92.4 per cent.

There are 20 incorporated places in the state with a population of less than 2,500. Of this number, reports were secured from 19; of these, 7 reported debt to the amount of \$392,236, with sinking fund assets of \$1,800.

The per capita debt for all incorporated places in 1913 was \$32.10. No comparable data for prior years are available.

The total debt shown in Table 1 for "cities, villages, townships, precincts, etc.," includes \$258,777 of the indebtedness of irrigation districts reported in San Juan County.

The school districts of New Mexico represent an organization separate from the county and for this reason their debt is shown separately. The debt reported here, however, as indicated by the note in the heading, does not include any debt for school purposes reported by cities with a population of more than 2,500. For this reason the per capita debt has not been calculated.

The funded debt of all the civil divisions of the state, including \$250,000 of funded debt of irrigation districts, amounted to \$5,220,798. Sinking funds to the amount of \$10,672, or 0.2 per cent of the funded debt, were held to reduce this debt. Revenue and special assessment loans amounted to \$126,371; and warrants outstanding, to \$76,512, of which \$8,777 represented outstanding warrants of irrigation districts.

NEW YORK.

The civil divisions of the state of New York reported a total indebtedness far in excess of that reported by any other state. The total indebtedness less sinking

fund assets was \$1,046,226,813, which amount was equal to 30.1 per cent of the indebtedness of all civil divisions in the United States and more than four times the amount reported by Pennsylvania, which ranks second in total debt. This amount was equal to the combined debt reported by all the states west of the Mississippi River and those of the South Atlantic division except Florida. The amount reported in 1913 was an increase of \$617,041,687, or 143.8 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net debt increased \$229,730,139, or 115.2 per cent. The per capita debt was \$107.71 in 1913, having increased \$51.15, or 90.4 per cent, over that reported in 1902, while from 1890 to 1902 the increase was \$23.31, or 70.1 per cent. Of the total net debt the counties were responsible for \$23,310,172, or 2.2 per cent; the cities, towns, and villages, for \$1,017,846,323, or 97.3 per cent; and the independent school districts, for \$5,070,318, or 0.5 per cent of the total.

The counties of the state reported a total debt of \$23,415,026 in 1913. Of this amount, \$18,689,767, or 79.8 per cent, represented funded or fixed debt; \$3,550,000, or 15.2 per cent, special assessment loans; \$1,128,883, or 4.8 per cent, revenue loans; and \$46,376, or 0.2 per cent, warrants. Sinking funds to the amount of \$104,854, or 0.4 per cent of the total debt, were held by the counties.

All of the special assessment indebtedness, \$3,550,000, was reported by Westchester County. This indebtedness was incurred under authority of a legislative act of May 26, 1905, for the construction of a sanitary trunk sewer for the use of the cities and towns in the Bronx River valley and a sanitary outlet sewer through the city of Yonkers to the Hudson River. A review of the act indicates that this indebtedness should probably be classed as funded or fixed; it is, however, shown as special assessment debt in accordance with the report received.

The net debt reported in 1913 was \$23,310,172, an increase of \$14,216,548, or 156.3 per cent, over the amount reported in 1902. The net debt in 1902 showed a decrease of \$1,843,014, or 16.9 per cent, from the amount reported in 1890.

During the period 1902 to 1913 the per capita debt increased \$2.84, or 122.4 per cent, while from 1890 to 1902 the per capita debt decreased \$0.12, or 4.9 per cent. The increase of indebtedness by the counties was general throughout the state, 45 of the 57 counties included in Table 4 reported increases, varying in amount from \$3,000, reported by Cattaraugus County, to \$5,758,854, reported by Westchester County. Five counties reported increases in excess of \$500,000. No special effort was made to ascertain the purpose of issue of the debt obligations reported, although in many cases this information was supplied by officials in charge of the records. The greater portion of the

increase in indebtedness of New York counties appears to have been on account of the construction and improvement of state highways. One very notable exception to this statement is Westchester County, where over one-half of the reported increase was in the nature of special assessment loans for the construction of sanitary sewers. This county is well within what is known as the metropolitan district of New York City, and has a population second only to that of Erie County. The per capita debt of Westchester County was \$19.99, and was exceeded only by that of Hamilton County, which reported a per capita debt of \$37.69, although the net debt was only \$164,833.

The cities and villages of New York reported a total debt of \$1,326,448,763, of which \$1,191,600,386, or 89.8 per cent, represented funded or fixed debt; \$43,598,171, or 3.3 per cent, special assessment loans; \$83,999,602, or 6.3 per cent, revenue loans; and \$7,250,604, or 0.6 per cent, outstanding warrants. Offsetting this total debt, sinking fund assets amounting to \$316,176,146, or 23.8 per cent of the total debt, were reported. The net debt of all incorporated places, cities, and villages was \$1,010,272,617, an increase of \$600,687,212, or 146.7 per cent, over the amount reported in 1902. In 1902 the net debt was \$409,585,405, an increase of \$233,315,933, or 132.4 per cent, over the amount reported in 1890. In 1913 the per capita debt for all incorporated places was \$124.73. The per capita debt was not calculated for prior years.

There were 17 cities in the state with an estimated population of more than 30,000 in 1913. These 17 cities reported a net debt of \$959,736,451, an increase of \$575,950,560, or 150.1 per cent, over the amount reported in 1902, and the amount reported for the last-mentioned year was an increase of \$255,032,366, or 198.1 per cent, over the amount reported in 1890. The per capita debt for this group of cities was \$141.98 in 1913.

The principal debtor in this group was New York City, which reported a net debt of \$862,743,861, or 85.4 per cent of the amount reported for all cities of the state, and 89.9 per cent of the net debt for those cities in the group of which it is a part. The total, or gross, debt reported by the city of New York was \$1,170,145,565. Of this amount, \$1,059,227,664, or 90.6 per cent, represented funded or fixed debt; \$29,385,883, or 2.5 per cent, special assessment loans; \$75,453,837, or 6.4 per cent, revenue loans; and \$6,078,181, or 0.5 per cent, outstanding warrants. The gross debt of New York City was in excess of the combined debt of the cities, towns, and villages of the states of Pennsylvania, Ohio, Massachusetts, New Jersey, and Illinois, which states rank highest in order of total debt after New York state. Offsetting the total debt were sinking fund assets and investments amounting to \$307,401,704, or 26.3 per

cent of the gross debt. The net debt of the city in 1913 was \$862,743,861, an increase of \$536,705,469, or 164.6 per cent, over the amount reported in 1902. In 1902 the net debt was \$326,038,392, an increase of \$223,552,319, or 218.1 per cent, over the amount reported in 1890. The per capita debt in 1913 was \$165.95, having increased \$76.93, or 86.4 per cent, over that of 1902. During the period 1890 to 1902 the per capita debt increased \$21.39, or 31.6 per cent.

Buffalo, the second largest city in the state, ranked second in net indebtedness in 1913, with a total of \$28,365,058. This amount was an increase of \$10,513,555, or 58.9 per cent, over the amount reported in 1902. The per capita debt during this period increased \$14.18, or 28.8 per cent. During the period 1890 to 1902 the net debt increased \$7,008,474, or 64.6 per cent, while the per capita debt increased \$6.88, or 16.2 per cent.

Every city of over 30,000 inhabitants, with the exception of Binghamton, reported a net debt in excess of \$1,000,000, while the per capita debt ranged from \$165.95 for New York City down to \$17.62 for the city of Binghamton. These cities, respectively, reported the highest and the lowest debt in the group. Elmira was the only city in the group to report a decrease in the amount of debt, having reduced its net debt \$88,711, or 7.6 per cent, from that of 1902. The per capita debts of Amsterdam, Binghamton, and Elmira in 1913 show a decrease from those in 1902.

The 38 cities which make up the group of places having a population of 8,000 to 30,000 reported a net debt of \$26,456,869, an increase of \$9,856,195, or 59.4 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net debt increased \$9,058,838, or 120.1 per cent. The largest individual debtor in this group was the city of White Plains, which, though it reported an increase of \$1,379,109, or 112.2 per cent, in net debt, during the period 1902 to 1913, showed a reduction of the per capita debt of \$15.08, or 9.7 per cent, during the same period. This city reported the highest per capita debt in this group and the second highest in the state. An increase in the amount of net indebtedness during the period 1902 to 1913 was reported by 31 of the 38 cities, while only 23 of the whole number reported an increased per capita debt.

There were 93 places in the group composed of cities and villages having a population of 2,500 to 8,000. These places reported a net indebtedness in 1913 amounting to \$15,670,853, an increase of \$10,542,852, or 205.6 per cent, over the amount reported in 1902. During the period 1890 to 1902 the total for this group increased \$3,978,612, or 346.2 per cent. Only 6 cities in this group reported a reduction in the amount of net indebtedness, while 15 reported a decrease in the per capita debt. The largest debt reported in this group, \$701,290, was for the city of Rye, which also re-

ported a larger per capita debt than any other city in the state, \$176.91. Elmira Heights reported the smallest debt, \$8,000, and Lyons the smallest per capita debt, \$2.65.

The census of 1910 showed 351 incorporated places in the state with a population of less than 2,500. Reports were secured by correspondence from 340 of these places. Of this number, 236 reported net debt aggregating \$8,408,444 in 1913, which was an increase of \$4,337,605, or 106.6 per cent, over the amount reported in 1902. The total debt shown for these places for 1890 is not comparable with the data for later years, because the amount reported for that year includes the indebtedness of those places which reported debt in 1890, but which, on account of having been annexed to other cities, lost their corporate identity and were not named in the report for 1902. Among these places were the city of Brooklyn and other cities, which were annexed to and became a part of New York City since 1890, and which reported a net indebtedness of \$37,310,096 in that year.

The towns of New York are similar to the towns of the New England states, but do not take quite such an important part in local affairs. This division, as it is constituted in New York, more nearly approaches the township. The chief difference, perhaps, is in the method of transacting the town business, which is usually done at meetings of the board of supervisors, each town being represented by one supervisor. In the thickly populated counties, these meetings, are of frequent occurrence, and at them taxes are levied, appropriations are made, and the general business of the towns is conducted. In 1913 these places reported a total indebtedness of \$7,620,979, of which \$7,018,921, or 92.1 per cent, represented funded or fixed debt; \$581,922, or 7.6 per cent, revenue loans; and \$20,136, or 0.3 per cent, outstanding warrants. A total of \$47,273, or 0.6 per cent of the total debt, was held in sinking funds. The net debt was \$7,573,706, which amount was reported by 276 towns, while in 1902 a net debt of \$7,754,762 was reported by 320 towns. The amounts shown for 1913 were taken largely from the annual reports of the boards of supervisors in the various counties, supplemented by correspondence where necessary.

The independent school districts of the state reported a net indebtedness of \$5,070,318. This amount does not include the indebtedness on account of schools of those incorporated places having a population in excess of 2,500. The amount reported represented an increase of \$2,318,983, or 84.3 per cent, over the amount reported in 1902, in which year the school debt was shown separately for all districts except those which included cities having a population of more than 8,000, in which case the school debt was included in that of the city.

No classification of the debt of school districts was attempted. Considering all the civil divisions of the state, except school districts, as a single unit, it will be seen that the combined gross debt amounted to \$1,357,484,768. Of this amount, \$1,217,309,074, or 89.7 per cent, represented funded or fixed debt; \$47,148,171, or 3.5 per cent, special assessment loans; \$85,710,407, or 6.3 per cent, revenue loans; and \$7,317,116, or 0.5 per cent, outstanding warrants. As an offset to this gross indebtedness the various divisions held sinking fund assets amounting to \$316,328,273, or 23.3 per cent of the total debt, leaving a net debt, including \$5,070,318 of independent school district debt, of \$1,046,226,813, a per capita debt of \$107.71.

NORTH CAROLINA.

The civil divisions of the state of North Carolina reported an indebtedness less sinking fund assets amounting to \$26,285,249 in 1913, an increase of \$17,692,069, or 205.9 per cent, over the amount reported for 1902. During the period from 1890 to 1902 the net debt of the civil divisions of the state increased \$5,178,835, or 151.7 per cent. The following increases in per capita debt are shown: \$2.30, or 109 per cent, during the period from 1890 to 1902, and \$6.98, or 158.3 per cent, from 1902 to 1913. The counties reported a net debt of \$7,049,219, or 26.8 per cent of the amount shown for all civil divisions in the state; and the cities, villages, towns, and townships reported \$19,236,030, or 73.2 per cent.

The gross debt reported by the counties was \$7,239,027. Of this amount, \$6,408,263, or 88.5 per cent, represented funded or fixed debt; \$796,138, or 11 per cent, revenue loans; and \$34,626, or 0.5 per cent, warrants.

The total assets held by the various county sinking funds amounted to \$189,808, which offset 2.6 per cent of the gross liabilities. Ninety-five of the 100 counties in the state reported debt in 1913, although several showed merely nominal amounts of indebtedness. Buncombe County reported the largest indebtedness, \$532,000, all funded or fixed. This amount represented 7.3 per cent of the total liabilities shown for all counties of the state. Iredell County ranked next with a debt of \$417,550, or 5.8 per cent of the total. The indebtedness of the last-named county consisted of funded or fixed debt obligations of \$416,535, or 99.8 per cent, and revenue loans of \$1,015, or 0.2 per cent of the total for the county.

The need of improved roads and the benefits to be derived from the construction of good roads in rural communities are realized in North Carolina, and a large part of the indebtedness incurred by the counties was for highway improvements.

The total indebtedness of the cities and towns in North Carolina in 1913 was \$18,859,529. Of this

amount, \$16,945,729, or 89.9 per cent, represented funded or fixed debt; \$1,077,550, or 5.7 per cent, special assessment loans; \$769,168, or 4 per cent, revenue loans; and \$67,082, or 0.4 per cent, warrants. For the amortization of bonds many of the cities and towns had created sinking funds, and in 1913 these funds held assets amounting to \$663,666, or 3.5 per cent of the gross liabilities. Charlotte, the only city in North Carolina with an estimated population of over 30,000 in 1913, reported liabilities amounting to \$2,488,766, or 13.2 per cent of the total indebtedness of all incorporated places in the state. The gross debt for 1913 of the 11 cities in the second group in Table 6 was \$8,415,134, or 44.6 per cent of the total. The 28 cities of the third group reported liabilities of \$5,068,267, or 26.9 per cent; and the towns having a population of less than 2,500 in 1910 reported \$2,887,362, or 15.3 per cent of the total for the state. The net debt of all incorporated places in the state increased \$12,303,027, or 208.8 per cent, from 1902 to 1913, and \$3,993,091, or 210.2 per cent, from 1890 to 1902. The debt of Charlotte increased \$1,866,766, or 300.1 per cent, from 1902 to 1913, and \$562,000, or 936.7 per cent, from 1890 to 1902. The per capita debt increased \$35.17, or 109.7 per cent, and \$26.88, or 517.9 per cent, respectively, for the two periods. Asheville reported the highest per capita debt, \$73.18, of any city in the state in 1913. This was \$39.86 higher than the average per capita debt of all cities and towns in the state, which was \$33.32 for that year.

Reports were received from 374 of the 414 places having a population of less than 2,500 in 1910. Of these, 280 reported no indebtedness and 94 reported a net debt of \$2,798,608, or a per capita debt of \$13.56.

The townships in North Carolina reported a gross debt of \$1,040,444. Of this amount, \$1,037,944, or 99.8 per cent, was funded or fixed debt, incurred principally for the purpose of improving the public roads. As many of the townships failed to report, it is more than probable that the total indebtedness incurred by this class of civil divisions is much greater than the amount shown in Table 7.

The total gross debt reported by all civil divisions in the state for 1913, except that of independent school districts, was \$27,139,000. Of this amount, \$24,391,936, or 89.9 per cent, represented funded or fixed debt; \$1,080,050, or 4 per cent, special assessment loans; \$1,565,306, or 5.8 per cent, revenue loans; and \$101,708, or 0.4 per cent, warrants. The assets held by the various sinking funds amounted to \$853,751, or 3.1 per cent of the gross debt.

NORTH DAKOTA.

The total debt less sinking fund assets of North Dakota in 1913, as reported by the various civil divisions within the state, amounted to \$12,440,699. Of this amount, the counties of the state had incurred

\$2,212,102, or 17.8 per cent; the cities, towns, villages, townships, etc., \$5,798,415, or 46.6 per cent; and the school districts were obligated for \$4,430,182, or 35.6 per cent of the total.

The net debt reported for 1913 shows an increase of \$7,800,871, or 168.1 per cent, over that of 1902. The increase during the period 1890 to 1902 amounted to \$1,500,807, or 47.8 per cent. The per capita increase from 1902 to 1913 was \$6.16, or 48.6 per cent. During the period 1890 to 1902 the per capita debt decreased \$4.51, or 26.3 per cent, although the net debt increased 47.8 per cent. The population of the state increased over 67 per cent during the period. As an indication of the growth and development of the state it is interesting to note that while the indebtedness of the civil divisions of the state increased 296.3 per cent during the period 1890 to 1913, the per capita debt increased only 9.6 per cent and in the latter year was only \$18.83, a comparatively low figure.

The total debt of the counties, considered as a separate unit, amounted to \$2,784,373 in 1913. Of this amount, \$2,036,501, or 73.1 per cent, represented funded or fixed debt, practically all in the form of general bonds and long-term certificates of indebtedness; \$228,152, or 8.2 per cent, special assessment loans; \$388,618, or 14 per cent, revenue loans; and \$131,102, or 4.7 per cent, outstanding warrants. As an offset to this debt the counties held sinking fund assets amounting to \$572,271, or 20.6 per cent of the total debt.

The net debt of counties reported in 1913 was \$2,212,102, an increase of \$914,004, or 70.4 per cent. The per capita debt decreased from \$3.54 in 1902 to \$3.35 in 1913, a decrease of \$0.19, or 5.4 per cent. During the period 1890 to 1902 the net debt decreased \$74,163, or 5.4 per cent, the per capita debt decreasing \$3.97, or 52.9 per cent, during the same period. From 1902 to 1913 the population of the state increased 80.4 per cent. The per capita debt in 1913 was \$4.16 less than in 1890, a decrease of 55.4 per cent, while during the same period the net debt increased 61.2 per cent.

Every county in the state reported debt. Two of them, however—Benson and Stutsman—reported no bonded debt and only a very small sum in outstanding warrants. While no data were collected to show the purpose of issue of the bonded debt, many of the schedules show that the bonds were issued for the purpose of erecting county buildings, such as court-houses, jails, etc. In some sections of the state bonds were issued for drainage purposes, though in general the drainage districts are confined to a single township.

It should be mentioned, in the consideration of the debt of counties, that many changes in the boundaries of these divisions have occurred since 1902. Where there were only 39 counties in the state at that date, there are now 49 counties, so that in many instances the figures given for the two years would not be fairly

comparable, since not only the extent, but the population as well, of any given county might be materially reduced. Reference to either Table 2 or Table 4 will show those counties organized since 1902, and for these counties no data for previous years can be shown. The indebtedness shown for some counties in 1902 was that for their present area together with any that may have been separated from them since that date. As an example, parts of Stark County were taken to form all of Adams and Hettinger Counties and parts of McKenzie and Dunn Counties, none of which appeared in the 1902 report. The area reported as Stark County in 1902 reported a net debt of \$23,068, while the four counties formed entirely or partly from portions of this county reported a debt of \$133,904 in 1913.

The cities, towns, and villages of North Dakota reported a total debt of \$6,014,270 in 1913. Of this amount, \$2,811,775, or 46.8 per cent, represented funded or fixed debt; \$2,935,672, or 48.8 per cent, special assessment and revenue loans; and \$266,823, or 4.4 per cent, outstanding warrants. As an offset against the total debt the cities held sinking funds amounting to \$306,302, or 5.9 per cent of the total debt.

The net debt reported by the cities, towns, and villages in 1913 amounted to \$5,707,968, an increase of \$4,043,539, or 242.9 per cent, over the reported debt of 1902. During the period 1890 to 1902 the debt of these civil divisions increased \$1,056,295, or 173.7 per cent.

Only two cities in North Dakota—Fargo and Grand Forks—have a population of more than 8,000. Each of these cities had a net indebtedness in 1913 in excess of \$1,000,000; the per capita debt of Fargo was \$70.35, while that of Grand Forks was \$106.98. These figures represent very material increases during the periods considered in this bulletin.

All of those cities with a population of 2,500 to 8,000 show material increases in indebtedness.

There were 202 cities, towns, and villages in North Dakota with a population of less than 2,500 in 1910. Of this number, 191 returned the schedules sent out from the Bureau of the Census. Of these, 136 reported a net debt aggregating \$1,269,077, with a per capita debt of \$13.58, basing the per capita on the total population of all places reporting. Only 15 of these places reported debt in 1890, when the total for places of this class was only \$123,319. In 1902 the number of places reporting debt had increased to 37 and the debt to \$359,166. The very rapid development of North Dakota within the past 23 years accounts for the indebtedness of these smaller cities. The very natural desire to adopt modern city conveniences and the competition among even the small cities for prestige and reputation have led many of them to incur debt far in excess of the usual amount for such cities in the

older and more settled portions of the country. That they have not, however, overstepped the bounds of discretion in the amount of indebtedness incurred is indicated by the amount of sinking funds held. The total of these funds was \$174,039, or 12 per cent of the total debt, an amount very much in excess of the amounts usually held for the redemption of debt by cities of this class.

The "specified civil divisions" shown in Table 7 include separately incorporated drainage districts and townships. These divisions reported debt to the amount of \$9,924 and \$85,724, respectively. Many of the townships are unorganized, and of course incurred no debt. Those reporting debt form only a very small percentage of the whole number, and these reported comparatively small amounts. The item of \$20,366 is chiefly for drainage and ditch work. The outstanding warrants were in most cases for supplies purchased.

Considering all the civil divisions of the state, except school districts, as a unit, it is found that the funded or fixed debt, \$4,880,632, formed 54.9 per cent of the total debt; the debt to be paid from special assessments, together with temporary loans, amounted to \$3,572,808, or 40.2 per cent; and the outstanding warrants amounted to \$440,851, or 4.9 per cent. The sinking fund assets amounted to \$883,774, or 9.9 per cent of the total debt of the civil divisions considered.

OHIO.

The civil divisions of the state of Ohio reported a net indebtedness of \$234,525,134 in 1913. This total debt was exceeded in only two states—New York and Pennsylvania. Of the total reported, the counties of the state were responsible for \$34,845,120, or 14.9 per cent; the cities, towns, villages, etc., for \$195,578,407, or 83.4 per cent; and the independent school districts, for \$4,101,607, or 1.7 per cent. The debt reported in 1913 was an increase of \$121,980,049, or 108.4 per cent, over the amount reported in 1902. The per capita debt during this period increased \$20.78, or 78.6 per cent. During the period 1890 to 1902 the net debt increased \$48,615,505, or 76 per cent, while the per capita debt increased \$9.04, or 51.9 per cent.

The gross debt reported by the counties in the state was \$36,230,254 in 1913. Of this amount, \$32,010,504, or 88.4 per cent, represented funded or fixed debt; \$2,108,323, or 5.8 per cent, special assessment loans; \$136,338, or 0.4 per cent, revenue loans; and \$1,975,089, or 5.4 per cent, outstanding warrants. Against this total debt various counties held sinking fund assets aggregating \$1,385,134, or 3.8 per cent of the total debt, leaving a net indebtedness for these divisions of \$34,845,120. This amount was an increase of \$19,200,188, or 122.7 per cent, over the amount reported in 1902. During this period the per capita debt increased \$3.34, or 90.8 per cent. From 1890 to 1902

the net debt of all counties increased \$7,847,927, or 100.7 per cent, while the per capita debt increased \$1.56, or 73.6 per cent.

Each of the 88 counties of the state reported some indebtedness, the net debt ranging from \$76, reported by Clinton County, to \$9,596,791, reported by Cuyahoga County. Other counties reporting only a small amount of net debt were: Brown, \$82; Carroll, \$540; Guernsey, \$96; and Noble, \$297. In 1902 eight counties were entirely free of debt and another, Brown, reported but \$29 of indebtedness, which consisted of outstanding warrants. In 1890 there were 32 counties reporting no debt. Cuyahoga, Hamilton, Mahoning, Lucas, and Franklin Counties each reported an indebtedness in excess of \$1,000,000 in 1913. In each of these counties is located one of the larger cities of the state, which, in a measure, accounts for their indebtedness being so much in excess of the average county debt. The largest per capita debt in 1913, \$32.42, was reported by Delaware County. Seventeen of the 88 counties reported debt to be paid from special assessments, and only 4 reported revenue loans. Outstanding warrants were reported by all but 6 counties.

The cities, towns, and villages of the state reported a gross debt of \$213,394,690 in 1913. Of this amount, \$192,678,157, or 90.3 per cent, represented funded or fixed debt; \$19,115,508, or 9 per cent, special assessment loans; \$1,303,078, or 0.6 per cent, revenue loans; and \$297,947, or 0.1 per cent, outstanding warrants. As an offset to the gross debt these places reported sinking funds amounting to \$23,148,679, or 10.8 per cent of the total debt, leaving a net debt of \$190,246,011, an increase of \$97,269,594, or 104.6 per cent, from 1902 to 1913. During the period 1890 to 1902 the net debt of all cities, towns, and villages increased \$40,671,336, or 77.8 per cent. The per capita debt was \$59.23 in 1913. No per capita debt was calculated for these places as a group in prior years.

That group of cities which had an estimated population of more than 30,000 in 1913, reported a net debt of \$143,632,930, an increase of \$77,498,600, or 117.2 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net indebtedness of these places increased \$23,139,593, or 53.8 per cent. The per capita debt for the group was \$75.60. The city of Cincinnati was the largest debtor in the group, having reported a net debt of \$54,282,907 in 1913, an increase of \$27,718,393, or 104.3 per cent, over the amount reported in 1902. The per capita debt for this city was \$136.23, an increase of \$55.63, or 69 per cent, over that of 1902. During the period 1890 to 1902 there was a slight increase in net debt and a decrease in the per capita debt. Cleveland, the largest city in the state, reported a net debt of \$41,829,001 in 1913, an increase of \$24,788,029, or 145.5 per cent, over the amount reported in 1902, the latter year

showing an increase of \$10,897,766, or 177.4 per cent, over the reported debt of 1890. In 1890 the per capita debt of Cleveland was \$23.51, increasing \$18.77, or 79.8 per cent, from 1890 to 1902, and \$24.89, or 58.9 per cent, from 1902 to 1913. Each city in this group reported an indebtedness in excess of \$1,000,000 in 1913, and every city, with the exception of Lima, reported an increase in the amount of debt from 1902 to 1913. Lima reported a decrease in per capita debt amounting to \$13.58, or 27.8 per cent.

There were 40 cities in the group ranging in population from 8,000 to 30,000. These cities reported an aggregate net indebtedness of \$25,330,544 in 1913, an increase of \$11,020,911, or 77 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net debt of the cities in this group increased \$9,207,306, or 180.5 per cent. The per capita debt for the group in 1913 was \$42.59. The cities of Coshocton, Findlay, Marietta, Tiffin, and Zanesville reported a decrease in both net and per capita debt from 1902 to 1913. Thirteen cities in this group reported a decrease in the per capita debt during the period 1902 to 1913. The largest debt in this group, \$1,892,400, was reported by the city of Portsmouth, and the smallest, \$158,633, by the city of Lancaster. The largest per capita debt, \$89.67, was reported by the city of Norwood, and the smallest, \$11, was reported by the city of Lancaster. The last-named city, though increasing the net debt \$29,733, or 23.1 per cent, showed a decrease in the per capita debt of \$2.89, or 20.8 per cent. Six cities in this group reported a net indebtedness in excess of \$1,000,000.

In the group of places having a population of 2,500 to 8,000, there were 83 cities which reported an aggregate net debt of \$15,588,307 in 1913, an increase of \$7,311,894, or 88.3 per cent, over that of 1902. During the period 1890 to 1902 these places reported an increase of indebtedness amounting to \$5,640,094, or 213.9 per cent. The per capita debt for this group in 1913 was \$41.28. Cleveland Heights, which reported a net debt of \$1,312,461, was the only city in this group to report an indebtedness in excess of \$400,000. The per capita debt for this city was \$444.15 in 1913. The smallest debt in the group, \$17,312, was reported by New Comerstown, and the smallest per capita debt, \$5.54, by Elmwood Place. Fourteen cities in this group reported a decrease in the net debt from 1902 to 1913, and 17 places reported a decrease in per capita debt during the same period.

There were 646 incorporated places in Ohio in 1910 which had less than 2,500 inhabitants. Data for these places were taken from printed state reports, and of the total number, 244 reported a net debt aggregating \$5,694,230 in 1913. This amount represents an increase of \$1,438,189, or 33.8 per cent, over the indebtedness of these places in 1902. During the period

1890 to 1902 the net debt of places in this class increased \$2,684,343, or 170.1 per cent. The per capita debt for these places, as a group, was \$16.52 in 1913. The per capita debt was not calculated for prior years.

The townships of Ohio reported a total debt in 1913 amounting to \$4,107,822, of which \$4,077,728, or 99.3 per cent, represented funded or fixed debt, and \$30,094, or 0.7 per cent, was to be paid from special assessments. Sinking fund assets amounting to \$204,250, or 5 per cent of the total debt, were reported, leaving a net debt of \$3,903,572. This amount was an increase of \$2,557,063, or 189.9 per cent, over the amount reported in 1902. The road districts of the state, which are included with townships under the head of "specified civil divisions" in Table 7, reported a total debt of \$1,458,150, all of which was in the form of general bonds, with sinking fund assets amounting to \$29,326, leaving a net indebtedness of \$1,428,824. No comparable data were shown for prior years.

The independent school districts of Ohio reported a net indebtedness in 1913 amounting to \$4,101,607, an increase of \$1,524,380, or 59.1 per cent, over the amount reported in 1902. As explained in the general text, the amount shown for 1913 is not strictly comparable with the amount shown for prior years, nor does it represent the total indebtedness of the civil divisions of the state on account of schools.

A summary of the gross indebtedness of all civil divisions, other than independent school districts, shows a total debt of \$255,190,916, of which \$230,224,539, or 90.2 per cent, represents funded or fixed debt; \$21,253,925, or 8.3 per cent, special assessment loans; \$1,439,416, or 0.6 per cent, revenue loans; and \$2,273,036, or 0.9 per cent, outstanding warrants. The sinking funds amounted to \$24,767,389, or 9.7 per cent of the total debt, leaving a net debt, including the debt of the independent school districts, of \$234,525,134, a per capita debt of \$47.23.

OKLAHOMA.

In 1913 the total debt less sinking fund assets of the counties, cities, and other civil divisions of Oklahoma was reported as \$53,790,889. Of this amount, the counties were responsible for \$7,937,004, or 14.7 per cent; the cities, towns, townships, and drainage districts, \$38,982,074, or 72.5 per cent; and the independent school districts, \$6,871,811, or 12.8 per cent.

The total indebtedness shown in Table 2 for the year 1902, \$4,039,663, represents the combined debt of the civil divisions of Indian Territory and the territory of Oklahoma. The state of Oklahoma, which was admitted to statehood in 1907, was formed from these two territories.

The per capita debt of all minor civil divisions of Oklahoma was \$27.74 in 1913, having increased \$23.24, or 516.4 per cent, over the per capita debt of the subdivisions of the two territories in 1902.

The total debt reported by the 77 counties in the state in 1913 was \$9,068,233. Of these liabilities, \$7,604,102, or 83.9 per cent, represented funded or fixed debt; and \$1,464,131, or 16.1 per cent, revenue loans. Sixty-four of the counties had established sinking funds for the amortization of the funded debt, and in 1913 these funds held assets amounting to \$1,131,229, or 12.5 per cent of the gross liabilities. Carter County reported a bonded debt of \$496,000, the largest amount shown for any county in the state. As an offset to this indebtedness the county had sinking funds amounting to \$10,917, or 2.2 per cent of the gross debt. Oklahoma County ranked second with a total debt of \$470,964, consisting of \$385,358, or 81.8 per cent, funded or fixed debt, and \$85,606, or 18.2 per cent, revenue loans. This county held sinking fund assets amounting to \$87,235, or 18.5 per cent of the total liabilities. On account of the establishment of new counties and boundary changes the data for the individual counties for 1913 and 1902 are not, in many cases, comparable.

The cities and towns of Oklahoma reported a gross debt of \$40,388,007 in 1913. Of these liabilities, \$29,404,231, or 72.8 per cent, represented funded or fixed debt; \$9,434,024, or 23.4 per cent, special assessment loans; \$509,794, or 1.3 per cent, revenue loans; and \$1,039,958, or 2.6 per cent, warrants. The monies and securities held by the sinking funds of the cities and towns amounted to \$2,026,940, or 5 per cent of the total indebtedness. The net debt of all incorporated places in the state in 1913 was \$38,361,067, an increase of \$36,306,715, or 1,767.3 per cent, over that of 1902.

Two cities of Oklahoma—Muskogee and Oklahoma City—had an estimated population of over 30,000 in 1913. These two cities reported a net debt of \$14,492,899, or 37.8 per cent of the total of such debt for all cities in the state.

Oklahoma City reported a total debt of \$10,599,078, or 26.2 per cent of the total for all cities in the state. Of this amount, \$5,635,800, or 53.2 per cent, represented funded or fixed debt; \$4,337,570, or 40.9 per cent, special assessment loans; \$36,306, or 0.3 per cent, revenue loans; and \$589,402, or 5.6 per cent, warrants. The city sinking funds held assets amounting to \$346,500, or 3.3 per cent of the total liabilities. The per capita debt was \$129.85 in 1913, having increased \$101.27, or 354 per cent, since 1902. Muskogee reported the next largest indebtedness, \$4,240,321, or \$119.94 per capita.

Reports were received from 316 cities and towns having a population of less than 2,500 in 1910. Of these, 156 towns reported no indebtedness, and 160 reported a gross debt of \$7,004,578, consisting of \$5,455,325, or 77.9 per cent, funded or fixed debt; \$1,315,192, or 18.8 per cent, special assessment loans; \$139,717, or 2 per cent, revenue loans; and \$94,344,

or 1.3 per cent, warrants. Sinking funds established by the various towns held assets of \$472,300, offsetting 6.7 per cent of the gross debt.

Eight cities having a population from 8,000 to 30,000 reported a net debt of \$8,088,337, or 21.1 per cent of the total net indebtedness of cities; and 36 cities having a population of 2,500 to 8,000 reported a net debt of \$9,247,553, or 24.1 per cent. The cities and towns having a population of less than 2,500 in 1910 reported a net debt of \$6,532,278, or 17 per cent of the total.

The net township debt reported for the state in 1913 was \$289,407. It is probable that this does not represent the entire indebtedness of this class of civil divisions, as many of the townships failed to report. Independent drainage districts reported liabilities of \$331,600.

The independent school district debt reported for Oklahoma amounted to \$6,871,811 in 1913. This does not represent the entire indebtedness of the subdivisions of the state for school purposes, as the school debts of all cities and towns having a population of over 2,500 were included as city liabilities.

OREGON.

The civil divisions of Oregon reported a total debt less sinking fund assets amounting to \$43,796,959 in 1913. Of this amount, \$2,614,312, or 6 per cent, had been incurred by the counties; \$38,788,140, or 88.6 per cent, by the cities, towns, villages, etc.; and \$2,394,507, or 5.5 per cent, by the school districts. The amount reported in 1913 represented an increase of \$32,730,826, or 295.7 per cent, over the amount reported in 1902. The per capita debt during this period increased \$32.29, or 126.3 per cent. During the period 1890 to 1902 the net debt increased \$8,587,958, or 346.5 per cent, the per capita debt increasing \$17.67, or 223.7 per cent, during the same period.

The counties of the state reported a total debt of \$2,614,312. Of this amount, \$2,569,682, or 98.3 per cent, was in the form of revenue loans; and \$44,630, or 1.7 per cent, in the form of outstanding warrants. It will be noted that none of the counties reported bonded indebtedness. This is because of the express constitutional prohibition against a county incurring a fixed indebtedness in excess of \$5,000. Just what effect this prohibition has had upon the financial affairs of the counties would be difficult to determine. The fact, however, may be noted that, with the exception of Washington, this state reports the largest indebtedness in the form of revenue loans. New Jersey and Illinois report large amounts of revenue loans, and these are the only states which nearly approach the sum reported by the counties of Oregon. The per capita debt reported by other civil divisions would indicate that they are bearing a part of the burden which in other states is assumed by the counties.

The net indebtedness reported by all counties in 1913 amounted to \$2,614,312, an increase of \$220,943, or 9.2 per cent, over the amount reported in 1902. The per capita debt during this period decreased \$2.08, or 37.6 per cent. During the period 1890 to 1902 the net debt of the counties increased \$1,487,658, or 164.3 per cent, while the per capita debt increased \$2.64, or 91.3 per cent. There were, of course, no sinking funds reported.

As suggested above, the cities, towns, villages, etc., bear the greater portion of the debt in Oregon. These places reported a total debt in 1913 amounting to \$42,109,152. Of this amount, \$22,718,302, or 54 per cent, represented funded or fixed debt; \$17,811,192, or 42.3 per cent, special assessment loans; \$875,761, or 2.1 per cent, revenue loans; and \$703,897, or 1.7 per cent, outstanding warrants. As an offset to the total debt these places held sinking fund assets amounting to \$3,321,012, or 7.9 per cent of the total debt.

The net debt reported by cities, towns, and villages amounted to \$38,788,140 in 1913, an increase of \$30,357,843, or 360.1 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net debt increased \$7,043,853, or 508.1 per cent. The per capita debt for all places in this class in 1913 was \$87.71. The per capita indebtedness was not calculated for these places in prior years.

Portland, the only city in the state with a population in excess of 30,000, reported a net debt in 1913, of \$25,130,039, an increase of \$18,859,996, or 300.8 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net debt increased \$5,570,043, or 795.7 per cent. The per capita debt of the city of Portland was \$101.92 in 1913.

The cities comprising the group ranging in population from 8,000 to 30,000 reported a net debt of \$4,829,103 in 1913, an increase of \$4,012,943, or 491.7 per cent, over the amount reported in 1902. The per capita debt for places in this class in 1913 was \$95.84. The principal debtor in this class was the city of Medford, which reported a net debt of \$1,464,178, a per capita debt of \$125.39. In 1902 this city reported a net debt of \$30,000, and a per capita debt of \$16.75. All the cities in this class show very material increases, a considerable portion of the increased debt being classed as "special assessments."

There were 13 cities having a population of 2,500 to 8,000, and these reported a total net debt of \$5,447,228, an increase of \$4,476,608 over the amount reported in 1902, and a per capita debt of \$93.43 in 1913. All cities in this class reported considerable increases during both periods, 1890 to 1902 and 1902 to 1913.

According to the census of 1910 there were 153 incorporated places in the state with a population of less than 2,500. Reports were secured by correspondence from 144 of these places. Of this latter number,

88 reported a net debt aggregating \$3,381,770, an increase of \$3,008,296 over the amount reported in 1902. The per capita debt for these places as a group was \$38.88 in 1913. The per capita debt for prior years was not calculated.

The school districts reported a net debt of \$2,394,507 in 1913, an increase of \$2,152,209, or 888.2 per cent, over the amount reported in 1902. The amount shown is the amount reported for school districts aside from the debt on account of schools in cities having a population in excess of 2,500, the school debt of these places having been included as a part of the city debt.

Taking all the civil divisions of the state, exclusive of school districts, as a single unit, it will be seen that the total debt of these divisions amounted to \$44,723,464. Of this amount, \$22,718,302, or 50.8 per cent, represented funded or fixed debt; \$17,811,192, or 39.8 per cent, special assessment loans, the whole of this sum having been reported by incorporated places; \$3,445,443, or 7.7 per cent, revenue loans; and \$748,527, or 1.7 per cent, outstanding warrants. As an offset to the total debt the several classes of divisions reported sinking fund assets amounting to \$3,321,012, or 7.4 per cent of the total debt, leaving a net debt of \$41,402,452. To this amount should be added the school district debt, which is assumed to be net, and which was not segregated by class of obligation, making a total net debt of \$43,796,959, a per capita debt of \$57.86.

PENNSYLVANIA.

The civil divisions of Pennsylvania rank second to those of New York in the total indebtedness reported in 1913, the aggregate net debt for all civil divisions amounting to \$245,979,219. Of this amount, \$30,796,465, or 12.5 per cent, had been incurred by the counties; \$205,706,168, or 83.6 per cent, by the cities and boroughs; and \$9,476,586, or 3.9 per cent, by the independent school districts. The net debt reported in 1913 was an increase of \$119,057,436, or 93.8 per cent, over the amount reported in 1902, the debt of this latter year showing an increase of \$59,948,718, or 89.5 per cent, over the amount reported in 1890. The per capita debt was \$30.34 in 1913, having increased \$10.85, or 55.7 per cent, since 1902. During the period 1890 to 1902 the per capita debt increased \$6.75, or 53 per cent.

Not including Philadelphia County, which is under municipal government, the counties of the state reported a gross debt in 1913 amounting to \$34,526,280, of which \$33,561,125, or 97.2 per cent, represented funded or fixed debt; \$925,025, or 2.7 per cent, revenue loans; and \$40,130, or 0.1 per cent, outstanding warrants. No special assessment loans were reported by the counties. As an offset to this gross debt the various counties reported an aggregate of \$3,729,815,

or 10.8 per cent of the gross debt, in sinking fund assets, leaving a net debt of \$30,796,465. This amount was an increase of \$19,620,118, or 175.6 per cent, over the amount reported in 1902. During this period the per capita debt increased \$2.60, or 120.4 per cent. During the period 1890 to 1902 the net debt increased \$3,334,863, or 42.5 per cent, while during the same period the per capita debt increased \$0.30, or 16.1 per cent.

Nine counties of the state were entirely free from debt in 1913, while the debt in other counties ranged from \$16,082,747, reported by Allegheny County, down to \$1,325, reported by Crawford County. Five counties reported debt in excess of \$1,000,000. There were 29 counties in the state which reported a decrease in net debt, and 31 which reported a decrease in per capita debt, since 1902. The per capita debt ranged from \$14.65 for Allegheny County down to \$0.02 for Crawford County. These counties reported the highest and lowest net debt, respectively. Eighteen counties reported a per capita debt of less than \$1 in 1913. Forty-six counties reported funded or fixed debt, nearly all of this being in the form of general bonds; none of the counties reported debt which could be classified as special assessments; 22 reported revenue loans; and 23 reported outstanding warrants.

The cities and boroughs of Pennsylvania reported a gross debt of \$240,339,770 in 1913. Of this amount, \$228,404,360, or 95 per cent, represented funded or fixed debt; \$3,856,293, or 1.6 per cent, special assessment loans; \$5,163,979, or 2.2 per cent, revenue loans; and \$2,915,138, or 1.2 per cent, outstanding warrants. That the indebtedness of these divisions was well in hand is indicated by the amount of sinking fund assets, which amounted to \$35,881,472, or 14.9 per cent of the total debt. The net debt of all incorporated places was \$204,458,293, an increase of \$95,369,943, or 87.4 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net debt increased \$55,803,638, or 104.7 per cent. The per capita debt for all incorporated places was \$37.65 in 1913.

There were 16 cities in the state with an estimated population in excess of 30,000 in 1913. These places reported a net debt aggregating \$158,598,260, an increase of \$75,716,717, or 91.4 per cent. During the period 1890 to 1902 these divisions increased their net debt \$36,896,749, or 80.2 per cent. The per capita debt for this group in 1913 was \$51.62. The per capita debt was not calculated in prior years. The city of Williamsport was the only one in this group to report a reduction of the net debt. Four cities—Allentown, Erie, Johnstown, and Williamsport—reported decrease in per capita debt since 1902.

The city of Philadelphia was the largest individual debtor not only of this group but of all cities within the state. This city reported a gross debt of \$117,234,637, of which \$113,661,475, or 97 per cent,

represented funded or fixed debt; \$1,128,392, or 1 per cent, revenue loans; and \$2,444,770, or 2 per cent, outstanding warrants. As an offset to the total debt the city held sinking fund assets amounting to \$16,273,665, or 13.9 per cent of the total debt. No special assessment loans were reported. The net debt reported in 1913 was \$100,960,972, an increase of \$48,656,478, or 93 per cent, over the amount reported in 1902. During the same period the per capita debt increased \$22.93, or 58.9 per cent. From 1890 to 1902 the net debt of the city increased \$22,681,699, or 76.6 per cent, while during the same period the per capita debt increased \$10.65, or 37.6 per cent.

Pittsburgh, the second city in the state, reported a gross debt of \$49,045,858, with sinking fund assets amounting to \$12,505,938, or 25.5 per cent of the total debt, leaving a net debt of \$36,539,920, an increase of \$17,669,419, or 93.6 per cent, over the amount reported in 1902. The per capita debt during this period increased \$9.55, or 17.1 per cent. From 1890 to 1902 the net debt increased \$8,843,695, or 88.2 per cent, while the per capita debt increased \$13.94, or 33.2 per cent.

In the group of cities and boroughs having a population of 8,000 to 30,000, 67 cities reported an aggregate net indebtedness amounting to \$21,479,731 in 1913, an increase of \$10,124,414, or 89.2 per cent, over the amount reported in 1902, the latter year showing an increase of \$8,456,714, or 291.8 per cent, over the amount reported in 1890. The per capita debt for this group was \$21.40 in 1913. The largest net debt in this group, \$913,367, was reported by Washington borough in Washington County. Although the amount shown was an increase of \$422,201, or 86 per cent, over the amount reported in 1902, the per capita debt, during this same period, decreased from \$64.04 to \$45.12, or 29.5 per cent. The smallest debt shown in this group, \$90,494, was reported by Lansford borough. The largest per capita debt, \$45.12, was reported by Washington borough, and the smallest, \$6.39, by Carbondale city. Eight of the 67 cities in this group show a reduction of net debt since 1902, while 22 places decreased their per capita debt.

In the next group, places having a population of 2,500 to 8,000, there were 180 incorporated cities and boroughs, each of which reported net indebtedness ranging from \$644,971, reported by Bellevue borough, down to \$3,844, reported by Galetton borough. These cities also reported the highest and lowest per capita debt, \$102 and \$0.95, respectively. Only 6 places in this group reported a reduction of debt since 1902, and in no instance was the reduction large.

The census of 1910 gave a total of 668 incorporated places in Pennsylvania with a population of less than 2,500. Reports were secured by correspondence from 635 of this number, and of these, 409 reported an aggregate net debt amounting to \$5,744,111. The

places in this class reported a net debt of \$8,932,421 in 1902, showing a reduction in 1913 of \$3,188,310, or 35.7 per cent. During the period 1890 to 1902 places in this class increased their net debt \$6,612,403, or 285 per cent.

There are two classes of civil divisions, poor districts and townships, reported under the general heading of "Specified civil divisions" in Table 5 and separately in Table 7. The poor districts are an institution peculiar to the state of Pennsylvania. The total net debt reported for these districts was \$439,936, an increase of \$119,753, or 37.4 per cent, over the amount reported in 1902. The townships reported a net debt of \$807,934 in 1913, an increase of \$541,094, or 202.8 per cent, over the amount reported in 1902. Although township organization is common throughout the state, this bureau experienced considerable difficulty in securing reports of indebtedness from these divisions. From the replies received, it is inferred that the townships, as a rule, do not incur debt. The poor districts presented an even more difficult problem, for the reason that this bureau was unable to secure even a list of those in existence. Sufficient information was secured to lead to the conclusion that these districts exist in only a few of the counties.

The school district debt reported in 1913 was \$9,476,586, an increase of \$3,406,528, or 56.1 per cent, over the amount reported in 1902. The data presented, however, are not strictly comparable for reasons set out in detail in the general text.

The various civil divisions of Pennsylvania, exclusive of school districts, reported a gross indebtedness in 1913 amounting to \$276,199,683. Of this amount, \$263,287,118, or 95.3 per cent, represented funded or fixed debt; \$3,868,293, or 1.4 per cent, special assessment loans; \$6,089,004, or 2.2 per cent, revenue loans; and \$2,955,268, or 1.1 per cent, outstanding warrants. The sinking funds reported by all divisions amounted to \$39,697,050, or 14.4 per cent of the total debt, leaving a net debt, including \$9,476,586 of independent school district debt, of \$245,979,219, a per capita debt of \$30.34.

RHODE ISLAND.

Rhode Island differs from all other states in the manner of handling the fiscal affairs of its civil divisions. It is the only state in which counties have no power or authority to incur debt, and in which all fiscal transactions such as usually fall to counties are carried on by the cities and towns, the latter division being that which is common to all New England states, and, in area at least, similar to the congressional township of the Middle and Western states.

The debt, therefore, of the two divisions named represents the debt of the state, except for such obligations as may have been incurred by the state as such.

The net debt of these divisions in 1913 amounted to \$25,589,314, an increase of \$59,016, or 0.2 per cent,

over that reported in 1902. The per capita debt, however, shows a reduction during this period of \$12.69, or 22.3 per cent, due entirely to an increase in population. During the period 1890 to 1902 the net debt increased \$12,911,164, or 102.3 per cent, while the per capita debt increased \$20.32, or 55.7 per cent.

Of the total debt reported, the cities, including towns having a population of 2,500 or more, reported \$36,357,426. Of this amount, \$33,160,730, or 91.2 per cent, represented funded or fixed debt; \$3,037,002, or 8.4 per cent, revenue loans; and \$159,694, or 0.4 per cent, outstanding warrants. As an offset to the total debt these divisions held sinking fund assets amounting to \$11,353,982, or 31.2 per cent of the total debt.

The cities and towns in Providence County reported an indebtedness of \$32,999,332, or 90.8 per cent of the total debt of all civil divisions of the state, and \$10,747,816, or 94.7 per cent, of the sinking fund assets. Newport County was second with a total city and town indebtedness of \$1,477,686, followed in order by Washington, Kent, and Bristol Counties. The city of Providence was the largest individual debtor, its obligations aggregating \$19,550,483. Pawtucket, with a total of \$6,404,234, and Woonsocket, with a total of \$3,486,857, were next in order. Every city and town in the state, with the exception of Portsmouth town in Newport County, reported debt. There were no incorporated cities or villages in the state with a population of less than 2,500. There were, however, several towns in this class and these places reported a total debt of \$619,828. Jamestown in Newport County reported a total debt of \$24,526, with sinking funds to the amount of \$32,852, or \$8,326 in excess of the total debt. None of the civil divisions in this class reported bonded debt, the entire amount falling in the class of revenue loans. It will be noted that this item is comparatively large in all classes of cities and towns, though nearly all places having a population of 2,500 or more reported bonded debt. Though there appears to be no constitutional prohibition of special assessments, reference to the various tables shows that no indebtedness has been incurred to be paid from special assessments.

Of the three cities having a population of over 30,000, Providence is the only one to show a decrease in the net debt. This decrease amounted to \$2,487,325, or 17.8 per cent, and was sufficient to effect a reduction in the total net indebtedness of all cities in this class. The increases in both Pawtucket and Woonsocket were comparatively small. The decrease in the per capita debt of the city of Providence was \$27.76, or 36.8 per cent.

SOUTH CAROLINA.

The total indebtedness less sinking fund assets in South Carolina amounted to \$15,096,533 in 1913, not including any debt which might be classified strictly as

a liability of the state. Of this amount, the counties were responsible for \$2,763,807; the cities, towns, and villages, for \$11,281,673; and the school districts, for \$1,051,053.

The total debt less sinking fund assets represents an increase of \$6,075,645, or 67.4 per cent, over that of 1902. In the period 1890 to 1902 the debt less sinking fund assets increased \$2,678,833, or 42.2 per cent. The per capita debt of the state as a whole for 1913 was \$9.60, as against \$6.55 in 1902, and \$5.51 in 1890. The increase in the per capita debt from 1890 to 1902 was 18.9 per cent, and 46.6 per cent from 1902 to 1913. A comparison of these percentages discloses the fact that during the period 1890 to 1902 the indebtedness increased at practically the same rate as the population, but during the period 1902 to 1913 the indebtedness increased three times as fast as the population.

The counties of South Carolina reported a total indebtedness less sinking fund assets of \$2,763,807 in 1913, a per capita debt of \$1.76; in 1902 the total debt was \$1,889,308, a per capita debt of \$1.37; and in 1890 the total was \$1,062,750, a per capita debt of \$0.92; showing a higher rate of increase in indebtedness than there was in population. The total debt was borne by 37 of the counties, 7 having reported no debt. This condition is due, in part at least, to the fact that the counties in South Carolina are divided into school districts and these, to a large extent, are carrying the indebtedness incurred on account of the public schools.

Of the total debt of counties, \$2,629,854 was funded or fixed, and \$424,600 was in the form of revenue loans. Because of express prohibition of the constitution no special assessment debt was incurred in the state. The total debt was partially offset by sinking fund assets amounting to \$290,647, most of which was held for the reduction of the funded debt.

The cities, towns, and villages carried the greater portion of the debt less sinking fund assets reported in the state, a total of \$11,281,673 in 1913, as against \$6,692,633 in 1902 and \$5,279,305 in 1890. The per capita debt in 1913 was \$31.47; the figures for former years are not available. The rate of increase of indebtedness from 1890 to 1902 was 26.8 per cent and from 1902 to 1913 was 68.6 per cent. This increase is not chargeable to any particular city or group of cities, every city in the state with a population of more than 2,500 having shown an increase in the amount of debt during the period 1902 to 1913.

The total debt of municipalities amounted to \$11,535,498. Of this amount, \$11,063,254 was in the form of funded or fixed debt, \$470,265 was in the form of revenue loans, and \$1,979 was in the form of outstanding warrants. As noted above, special assessments are prohibited in the state. Local improvements are all made under a general and uniform tax, and though attempts have been made at various times to secure payment for such improvements by special

assessment, all such have been held to be unconstitutional.

The funded debt of the municipalities forms 95.9 per cent of the total; the revenue loans form 4.1 per cent; and the outstanding warrants form less than 0.1 per cent. All of the outstanding warrants were issued by incorporated places having a population of less than 2,500.

The indebtedness of the municipalities is offset by sinking fund assets amounting to \$253,825, or 2.2 per cent of the total debt. These assets were distributed among the various classes of cities, the largest amount held by any one class being \$117,710 held by cities having a population of 2,500 to 8,000, representing 3.8 per cent of the total indebtedness of all cities in this class.

The indebtedness of the school districts amounted to \$1,051,053. This amount represents only that part of the indebtedness on account of schools for which the separate districts were responsible. No separation was made of the school debt in those cities, towns, and villages having a population of more than 2,500. The school indebtedness for these places appears as a part of the debt reported in Table 6.

Considering the various classes of indebtedness, the state as a whole shows a funded debt of \$13,693,108; revenue loans, \$894,865; and outstanding warrants, \$1,979. These figures do not include the debt reported for the separate school districts for which no separation by classes can be made. The bonded debt forms 93.9 per cent of the total; of the remainder, 6.1 per cent represented revenue loans, and less than 0.1 per cent, outstanding warrants.

All of the incorporated places in South Carolina with a population of 2,500 or more reported debt, and all of them show an increase over 1902. There are 223 incorporated places in the state having a population of less than 2,500. Of this number, reports were received from 200. Of these, 50 reported debt aggregating \$927,298 with sinking fund assets amounting to \$27,645. Of the total debt, the funded or fixed debt amounted to \$794,179, the revenue loans amounted to \$131,140, and \$1,979 was in the form of outstanding warrants. The total debt less sinking fund assets of places having a population of less than 2,500 amounted to \$899,653 and represents an increase of 670.8 per cent over 1902 when the total debt less sinking fund assets amounted to only \$116,720. Even with this large percentage of increase the per capita debt is only \$7.45.

SOUTH DAKOTA.

The civil divisions of South Dakota reported a total debt less sinking fund assets amounting to \$12,314,512 in 1913. The counties reported \$3,590,560, or 29.2 per cent of the total; the cities, towns, villages, townships, etc., \$6,330,121, or 51.4 per cent; and the school districts, \$2,393,831, or 19.4 per cent. The amount

reported in 1913 represents an increase of \$6,187,424, or 101 per cent of the amount reported in 1902. The increase in the per capita debt during this period amounted to \$4.67, or 32.3 per cent. During the period 1890 to 1902 the net debt of all civil divisions increased \$384,981, or 6.7 per cent, while the per capita debt decreased \$2.98, or 17.1 per cent, during this period.

Because of the many changes in the boundaries and the organization of new counties the data for 1913 are not strictly comparable with those reported for 1902 and 1890, although the per capita debt forms a very accurate basis for comparison, even for such counties as may have been divided, if it is assumed that each division of a county bears its proportion of the debt of the original county.

The total debt reported by counties amounted to \$3,646,696. Of this amount, \$1,934,631, or 53 per cent, represented funded or fixed debt; \$1,614,412, or 44.3 per cent, revenue loans; and \$97,653, or 2.7 per cent, outstanding warrants. As an offset to this debt the counties held sinking fund assets to the amount of \$56,136, or 1.5 per cent of the total debt.

The net debt of the counties was \$3,590,560 in 1913, an increase of \$847,693, or 30.9 per cent, over the amount reported in 1902. The per capita debt during this period decreased \$0.90, or 13.9 per cent. During the period 1890 to 1902 the net debt increased \$301,533, or 12.4 per cent, while the per capita debt during this period decreased \$0.94, or 12.7 per cent.

The total debt reported by incorporated places in the state amounted to \$6,600,168 in 1913. Of this amount, \$5,392,318, or 81.7 per cent, represented funded or fixed debt; \$793,517, or 12 per cent, special assessment and revenue loans; and \$414,333, or 6.3 per cent, outstanding warrants. Sinking funds were held amounting to \$421,618, or 6.4 per cent of the total debt. The net debt of all incorporated places was \$6,178,550, or 134.6 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net debt of these places increased \$1,499,576, or 132.2 per cent.

There were no cities in South Dakota with a population in excess of 30,000, and only three cities make up the group having from 8,000 to 30,000 population. Of these cities, Sioux Falls is the largest and reported a net debt in 1913 amounting to \$1,124,262, an increase of \$624,367, or 124.9 per cent, over the amount reported in 1902. The per capita debt increased \$28.16, or 62.4 per cent, during the period 1902 to 1913. Every city in the state with a population of 2,500 or more reported an increase in the amount of debt, with the single exception of Yankton, and although this city reported a decrease of 7.5 per cent in the amount of indebtedness, the per capita debt increased from \$25.70 in 1902 to \$25.90 in 1913, or 0.8 per cent.

The group of cities ranging in population from 2,500 to 8,000 reported the largest debt in 1913, as well as in 1902 and 1890, although the greatest increase was shown for the group having a population of less than 2,500.

According to the census of 1910 there were 222 cities, towns, and villages in South Dakota with a population of less than 2,500. As explained elsewhere, reports were secured for places in this class by correspondence, and of the total number of places 216 returned reports as requested. Of this number, 162 reported indebtedness aggregating \$2,298,938, with sinking fund assets amounting to \$245,208, leaving a net debt of \$2,053,730, a per capita debt of \$17.80, basing the per capita upon the total population of all places reporting. The net debt represents an increase of \$1,298,137, or 171.8 per cent, over the amount reported in 1902 by places in this class.

Although the townships in South Dakota have the authority to incur debt, only a very few of them have exercised this right. The total debt reported by these divisions in 1913 amounted to only \$168,565. Of this amount, \$95,185 represented funded or fixed debt; \$15,236, special assessments; and \$58,144, outstanding warrants. Sinking funds amounting to \$16,994 were held by the townships, leaving a net debt of \$151,571. The greater portion of the township debt was reported by townships in Lyman, Perkins, and Stanley Counties, the total for these counties aggregating \$117,501.

Considering all civil divisions of the state, except school districts, as a single unit, it will be seen that the total debt in 1913 was \$10,415,429. Of this amount, \$7,422,134, or 71.3 per cent, represented funded or fixed debt; \$183,068, or 1.8 per cent, special assessment loans; \$2,240,097, or 21.5 per cent, revenue loans; and \$570,130, or 5.5 per cent, outstanding warrants or orders. As an offset to the total debt all divisions held sinking fund assets to the amount of \$494,748, or 4.8 per cent of the total debt, leaving a net debt of \$12,314,512, a per capita debt of \$19.15, including the debt of school districts, which is assumed to be net, and for which no segregation as to class was made.

TENNESSEE.

The total debt less sinking fund assets reported by the civil divisions of Tennessee in 1913 amounted to \$47,286,778. The counties of the state were obligated for \$16,520,434, or 34.9 per cent of the total debt, while the cities, towns, and villages were obligated for \$30,766,344, or 65.1 per cent of the total.

The net debt of all civil divisions reported for 1913 exceeded that reported for 1902 by \$32,554,116, or 221 per cent. The per capita debt increased \$14.02, or 197 per cent, during this period. From 1890 to 1902 the net debt increased \$4,884,793, or 49.6 per

cent, while the per capita debt increased \$1.54, or 27.6 per cent, during the same period.

The total indebtedness reported by the counties of Tennessee in 1913 was \$16,897,388. Of this indebtedness, \$16,299,541, or 96.5 per cent, represented funded or fixed debt; \$565,264, or 3.3 per cent, revenue loans; and \$32,583, or 0.2 per cent, outstanding warrants. Sinking funds amounting to \$376,954, or 2.2 per cent of the total debt, were held as an offset to the indebtedness. The net debt of the counties increased \$13,000,425, or 369.3 per cent, during the period 1902 to 1913, while the per capita debt increased \$5.68, or 334.1 per cent. During this period the funded debt of the counties increased \$13,513,548, or 485.1 per cent. Where only 22 counties reported funded or fixed debt in 1902, 58 out of a total of 96 counties reported obligations of this class in 1913. The large increase in this class of debt is almost wholly due to the building of roads, the construction of bridges, schoolhouses, courthouses, etc. The major portion of the debt was incurred for "pike roads," and the increase of indebtedness on this account was general throughout the state. A considerable portion was incurred for new bridges, and in several instances bonds were issued to aid in the building of railroads in the counties. Davidson, Hamilton, and Shelby Counties were the principal debtors, reporting a total debt of \$7,139,876, or 42.3 per cent of the total county debt. This is undoubtedly due to improvements necessitated because of large cities within these counties.

The total debt of the cities, towns, and villages in Tennessee amounted to \$31,520,298 in 1913. Of this amount, \$28,690,990, or 91 per cent, represented funded or fixed debt, chiefly general bonds; \$2,764,218 or 8.8 per cent, special assessment and revenue loans; and \$65,090, or 0.2 per cent, outstanding warrants. The incorporated places held sinking fund assets amounting to \$753,954, or 2.4 per cent of the total debt.

The net debt of the cities, towns, and villages amounted to \$30,766,344, an increase of \$19,553,691, or 174.4 per cent, during the period 1902 to 1913. From 1890 to 1902 the total debt increased \$3,536,843, or 46.1 per cent.

Each of the several classes of cities showed a material increase in the amount of net indebtedness; the largest percentage of increase being for incorporated places having a population of less than 2,500, where the increase amounted to \$1,594,057, or 429 per cent. Memphis city was the largest individual debtor, the net obligations of the city amounting to \$12,062,396, an increase of 254.8 per cent, over the debt reported in 1902. Nashville was next, with a total of \$5,716,208. Knoxville and Chattanooga followed in order, each having a net debt in excess of \$3,000,000.

Only three cities having a population in excess of 2,500, La Follette, Pulaski, and Rockwood, show a

decrease in the net debt during the period 1902 to 1913, and the reduction of debt in these places was comparatively small.

There were 160 cities, towns, and villages in the state with a population of less than 2,500 in 1910. Of this number, 148 replied to inquiries made by correspondence, 71 of which reported net indebtedness aggregating \$1,965,608, a per capita debt of \$15.28, based on the population of all places reporting.

There are no districts in Tennessee other than those mentioned which have the power to incur debt. The schools are dependent upon the counties or municipalities in which they are located, and the school debt was included with that of the cities or counties.

Because of the fact that counties are the only taxing units, aside from cities, towns, and villages, the per capita debt shown for the counties is comparatively high, due to the fact that all expenses for highways, bridges, schools, etc., must be borne by the county.

Considering the various classes of indebtedness for all classes of civil divisions as a single unit, it will be observed that the gross debt in 1913 amounted to \$48,417,686, of which \$44,990,531, or 92.9 per cent, represented funded or fixed debt; \$3,329,482, or 6.9 per cent, special assessments and revenue loans; and \$97,673, or 0.2 per cent, outstanding warrants. The sinking funds amounted to \$1,130,908, or 2.3 per cent of the total indebtedness.

TEXAS.

The civil divisions of Texas reported an indebtedness less sinking fund assets amounting to \$83,237,530 in 1913. Of this amount, the counties were obligated for \$27,668,304, or 33.2 per cent; the cities, towns, villages, etc., were obligated for \$48,622,862, or 58.4 per cent; and the independent school districts were obligated for \$6,946,364, or 8.3 per cent of the total debt. The amount reported in 1913 was an increase of \$50,780,964, or 156.5 per cent, over the amount reported in 1902. During this period the per capita debt increased \$9.84, or 97.3 per cent. From 1890 to 1902 the net debt increased \$16,602,018, or 104.7 per cent, and during this period the per capita debt increased \$3.02, or 42.6 per cent.

The counties of Texas reported a gross indebtedness of \$29,907,137 in 1913. Of this amount, \$28,917,045, or 96.6 per cent, represented funded or fixed debt; \$825,095, or 2.8 per cent, revenue loans; and \$164,997, or 0.6 per cent, outstanding warrants. No special assessment loans were reported by the counties. Sinking funds were reported to the amount of \$2,238,833, or 7.5 per cent of the total debt. The net debt in 1913 was \$27,668,304, an increase of \$16,175,008, or 140.7 per cent, over the amount reported in 1902, the latter year having reported an increase of \$4,601,582, or 66.8 per cent, over the amount reported in 1890. During the period 1902 to 1913 the per capita debt

increased \$3.05, or 85.2 per cent, while during the period 1890 to 1902 the increase was only \$0.50, or 16.2 per cent. In 1913 there were 249 counties in Texas, 202 of which reported debt, ranging in amount from \$2,373,824, reported by Galveston County, to \$1,500, reported by Uvalde County.

The largest per capita debt, \$55.54, was reported by Brazoria County, and the smallest, \$0.05, by Fannin County. Sinking funds amounting to \$2,238,833 were reported by 141 counties.

The cities, towns, and villages of the state reported a gross indebtedness of \$53,234,834. Of this amount, \$50,979,616, or 95.8 per cent, represented funded or fixed debt; \$1,472,077, or 2.8 per cent, revenue loans; and \$783,141, or 1.5 per cent, outstanding warrants. No special assessment loans were reported. As an offset to the total debt, the cities, towns, and villages held sinking fund assets amounting to \$5,442,642, or 10.2 per cent of the total debt, leaving a net debt of \$47,792,192 in 1913. This amount was an increase of \$28,272,972, or 144.8 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net debt increased \$10,590,368, or 118.6 per cent. The per capita debt in 1913 was \$37.39. No calculations of per capita debt were made for these places as a group in prior years.

There were seven cities in Texas with an estimated population in excess of 30,000. These places reported an aggregate net debt of \$31,360,837, a per capita debt of \$60.75, and an increase of \$16,493,363, or 110.9 per cent, over the amount reported in 1902. The latter year showed an increase of \$8,939,838, or 150.8 per cent, over the total reported for 1890. The largest individual debtor in this group was the city of Houston, which reported a net debt in 1913, amounting to \$9,284,633, an increase of \$5,588,990, or 151.2 per cent, over the amount reported in 1902. During this period the per capita debt increased \$28.14, or 37.3 per cent. During the period 1890 to 1902 the net debt of this city increased \$2,050,443, or 124.6 per cent, while the per capita debt increased \$15.64, or 26.2 per cent. The largest per capita debt in this group, \$110.73, was reported by the city of Galveston, an increase of \$17.38, or 18.6 per cent over the amount reported in 1902. San Antonio was the only city in the group to report a decreased net debt in 1913, although Austin, Fort Worth, and San Antonio reported a decreased per capita debt. Fort Worth, although reporting an increase of 184.1 per cent in net debt, reported a decrease of 14.8 per cent in per capita debt.

In the group of cities having a population of 8,000 to 30,000 there were 20 places which reported an aggregate net debt of \$8,689,644, an increase of \$6,137,514, or 240.5 per cent, over that of 1902. The increase from 1890 to 1902 was \$1,014,509, or 66 per cent. The city of Waco, with a net debt of \$1,720,666,

was the largest debtor in this group, and also reported the largest per capita debt, \$61.09. Laredo was the only city in the group to report a decrease of indebtedness, and this city also reported the smallest per capita debt in the group.

The aggregate net indebtedness of the 64 places comprising the group having a population of 2,500 to 8,000 amounted to \$5,712,211 in 1913, an increase of \$4,327,323, or 312.5 per cent, over that of 1902, the latter year showing an increase of \$437,000, or 39.8 per cent, over that of 1890. The per capita debt for this group was \$22.54 in 1913. Only four cities in this group—Calvert, Cameron, Uvalde, and Victoria—reported a decreased indebtedness during the period 1902 to 1913, and six showed a decreased per capita debt. The largest debt, \$556,568, was reported by the city of Port Arthur, which also reported the largest per capita debt, \$72.63. The smallest debt was \$1,029, reported by Eagle Pass, which also reported the smallest per capita debt, \$0.29.

The census of 1910 reported 229 incorporated places in Texas with a population of less than 2,500. Reports were secured from 218 of these places, and of this number, 110 reported a net indebtedness aggregating \$2,029,500 in 1913. This amount was an increase of \$1,314,772, or 184 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net debt of places in this group increased only \$199,021, or 38.6 per cent. The per capita debt for this group was \$8.25 in 1913.

The independent school districts of Texas reported a net indebtedness of \$6,946,364 in 1913, an increase of \$5,502,314, or 381 per cent, over that of 1902. As explained in the general text, the data presented for school indebtedness are not comparable, nor are they complete for either 1913 or 1902. None of the school debt of cities having a population of over 2,500 is shown with the independent districts in 1913, while in 1902 the school debt was included with that of cities having a population of 8,000 or more.

Taking all the civil divisions of Texas, exclusive of school districts, as a single unit, it will be seen that the gross debt was \$83,972,641 in 1913. Of this amount, \$80,727,331, or 96.1 per cent, represented funded or fixed debt; \$2,297,172, or 2.7 per cent, revenue loans; and \$948,138, or 1.1 per cent, outstanding warrants. No special assessment loans were reported in the state. Offsetting this gross debt, the various civil divisions reported sinking fund assets amounting to \$7,681,475, or 9.1 per cent of the total, leaving a net debt, including the debt of independent school districts, amounting to \$83,237,530, a per capita debt of \$19.95.

UTAH.

The net indebtedness reported by the civil divisions of the state of Utah amounted to \$13,858,621 in 1913.

Of this amount, the counties were obligated for \$936,730, or 6.8 per cent; the cities, towns, and villages, and irrigation districts, for \$10,988,423, or 79.3 per cent; and the independent school districts, for \$1,933,468, or 13.9 per cent. The amount reported was an increase of \$8,220,545, or 145.8 per cent, over the amount reported in 1902. During the period from 1890 to 1902 the net debt increased \$4,870,575, or 634.6 per cent. The per capita debt increased \$14.79, or 76 per cent, from 1902 to 1913, and \$15.76, or 427.1 per cent, from 1890 to 1902.

The counties of the state reported a gross debt of \$972,727 in 1913. Of this amount, \$800,772, or 82.3 per cent, represented funded or fixed debt; \$155,107, or 16 per cent, revenue loans; and \$16,848, or 1.7 per cent, outstanding warrants. Offsetting this indebtedness were sinking funds amounting to \$35,997, or 3.7 per cent of the total. No debt was reported to be paid from special assessments. The net debt reported, \$936,730, was an increase of \$98,170, or 11.7 per cent, over the amount reported in 1902, but the per capita debt decreased \$0.58, or 20.1 per cent. During the period 1890 to 1902 the net debt of the counties increased \$788,701, or 1,581.9 per cent, and during the same period the per capita debt increased \$2.65, or 1,104.2 per cent.

Four of the 27 counties in the state were entirely free from debt in 1913, and 7 reported only a small indebtedness in the form of outstanding warrants. Twelve counties reported a decrease in net debt from 1902 to 1913, while 13 reported a decrease in per capita debt. Salt Lake County reported the largest debt in 1913, although showing a decrease in both net and per capita debt from 1902 to 1913. Two counties reported a per capita debt of less than one-half of 1 cent. The highest per capita debt, \$12.03, was reported by Carbon County.

The cities, towns, and villages of the state reported a gross indebtedness of \$10,994,182 in 1913. Of this amount, \$8,802,331, or 80.1 per cent, represented funded or fixed debt; \$1,801,306, or 16.4 per cent, special assessment loans; \$225,357, or 2 per cent, revenue loans; and \$165,188, or 1.5 per cent, outstanding warrants. Sinking funds were reported amounting to \$105,759, or 1 per cent of the total debt. The net debt reported, \$10,888,423, was an increase of \$6,405,140, or 142.9 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net debt increased \$3,765,641, or 524.7 per cent. The per capita debt for all incorporated places was \$40.90 in 1913.

Salt Lake City, the only city in the state with a population in excess of 30,000, reported the largest debt in 1913. The amount shown, \$7,354,764, was an increase of \$3,813,494, or 107.7 per cent, over the amount reported in 1902, while from 1890 to 1902 the increase was \$3,041,270, or 608.3 per cent. The per

capita debt for this city was \$11.15 in 1890, increasing to \$64.07, or 474.6 per cent in 1902, and to \$69.57, or 8.6 per cent, in 1913.

The cities of Ogden and Provo, which composed the group of cities having a population of 8,000 to 30,000, reported a net indebtedness of \$1,526,570 and \$216,658, respectively, in 1913. The per capita debt of Ogden was \$53.40 in 1913, an increase of \$13.34, or 33.3 per cent, over that of 1902, which year showed an increase in per capita debt of \$29.99, or 297.8 per cent, over that of 1890. The city of Provo reported an increase in net debt of \$119,657, or 123.4 per cent, from 1902 to 1913, and an increase in the per capita debt of \$6.40, or 40.8 per cent, during the same period.

There were 13 cities in the group having a population of 2,500 to 8,000, and these places reported an aggregate net indebtedness of \$953,964, an increase of \$793,741, or 495.4 per cent, over the amount reported in 1902. In this latter year, however, there were but 6 cities in this group. In 1890 the two cities in this group reported a combined debt of \$49,000. The largest individual debtor in 1913 was the city of Logan, which reported a net debt of \$228,531, a per capita debt of \$30.38. The largest per capita debt, \$40.89, was reported by the city of Lehi, with a net debt of \$121,186.

There were 87 incorporated places in the state with a population of less than 2,500 in 1910. Of this number, 82 reported, and of these, 47 gave an aggregate indebtedness of \$836,467, an increase of \$816,548 from 1902 to 1913. These places reported a slight increase in the net debt during the period 1890 to 1902. The per capita debt for this group, based on the population of all places reporting, was \$10.94 in 1913. No calculations of per capita debt were made for these places, as a group, in prior years.

Under the heading of "Specified civil divisions" in Table 7, one irrigation district reported an indebtedness of \$100,000, all in general bonds, with no sinking fund assets.

The independent school districts of the state reported a net debt of \$1,933,468 in 1913, an increase of \$1,618,015, or 512.9 per cent, over that of 1902. For reasons given in the general text the data presented for these years are not strictly comparable.

A summary of the gross indebtedness reported by the various classes of divisions, exclusive of school districts, shows a total debt for all divisions amounting to \$12,066,909. Of this amount, \$9,703,103, or 80.4 per cent, represented funded or fixed debt; \$1,801,306, or 14.9 per cent, special assessment loans; \$380,464, or 3.2 per cent, revenue loans; and \$182,036, or 1.5 per cent, outstanding warrants. Sinking fund assets were reported amounting to \$141,756, or 1.2 per cent of the total debt, leaving a net debt, including the debt of independent school districts, of \$13,858,621, a per capita debt of \$34.24.

VERMONT.

The net indebtedness of the civil divisions of the state of Vermont was \$6,410,736 in 1913. The counties of the state, as a separate unit, were obligated for \$25,931, or 0.4 per cent of the total debt; the cities, villages, and towns were obligated for \$5,791,112, or 90.3 per cent; and the independent school districts, for \$593,693, or 9.3 per cent. The net debt reported was an increase of \$1,556,908, or 32.1 per cent, over the amount reported in 1902. The increase in the per capita debt from 1902 to 1913 was \$3.78, or 26.9 per cent. During the period 1890 to 1902 the net debt of all civil divisions increased \$1,216,871, or 33.5 per cent, while the per capita debt during the same period increased \$3.09, or 28.2 per cent.

The largest net debt, \$1,252,139, as well as the largest per capita debt, \$28.87, was reported by Chittenden County and the minor civil divisions within the county. The net debt reported in 1913 was an increase of \$390,163, or 45.3 per cent, over the amount reported in 1902, the amount reported in the latter year being an increase of \$482,693, or 127.3 per cent, over the amount reported in 1890. During the period 1890 to 1902 the per capita debt increased \$7.56, or 35.5 per cent, and from 1902 to 1913 it increased \$10.59, or 98.8 per cent. The smallest debt was reported by Grand Isle County and the minor civil divisions within the county, amounting to only \$6,059, a reduction from that of 1902 of \$2,441, or 28.7 per cent. During the period 1890 to 1902 the net debt was reduced \$29,248, or 77.5 per cent. In 1890 the per capita debt was \$9.82, decreasing to \$1.85 in 1902, and to \$1.61 in 1913.

The indebtedness reported by the counties of Vermont was the smallest in the United States reported by divisions of this class. Of the 14 counties in the state, only 7 reported debt and of this number, 6 reported amounts less than \$1,000. No sinking fund assets were reported. The total debt, which is also the net debt, reported was \$25,931 of which \$25,310, or 97.6 per cent, represented revenue loans, and \$621, or 2.4 per cent, represented outstanding warrants. None of the counties reported either bonded debt or special assessment loans. The debt reported in 1913 was an increase of \$18,687, or 258 per cent, over the amount reported in 1902, the amount reported in the latter year being an increase of \$2,136, or 41.8 per cent, over the amount reported in 1890. The per capita debt in 1913 was \$0.07; in 1902, \$0.02; and in 1890, \$0.02. The principal debtor was Lamoille County, which reported a net debt of \$23,774 in 1913. This debt was 91.7 per cent of the debt of all counties, and was the only amount reported which was worthy of consideration. This county reported an indebtedness of \$120 in 1902.

The cities, towns, and villages of the state reported a gross indebtedness of \$5,380,378 in 1913. Of this

amount, \$4,651,111, or 86.4 per cent, represented funded or fixed debt; \$672,516, or 12.5 per cent, revenue loans; and \$56,751, or 1.1 per cent, outstanding warrants. These places reported sinking fund assets amounting to \$325,812, or 6.1 per cent of the total debt. The net debt reported in 1913 was an increase of \$1,464,072, or 40.8 per cent, over the amount reported in 1902, while the latter year showed an increase of \$2,219,950, or 162 per cent, over the reported debt in 1890. The per capita debt for all cities, towns, and villages in the state was \$25.13 in 1913. The per capita debt for these places as a group in prior years was not calculated.

The city of Burlington, which reported a net debt of \$926,064, was the largest city and the largest individual debtor in the state. The amount reported for 1913 was an increase of \$272,628, or 41.7 per cent, over the amount reported in 1902. During the period 1902 to 1913 the per capita debt of this city increased \$10.37, or 30.9 per cent. The increase in net debt of this city from 1890 to 1902 was \$341,631, or 109.6 per cent, while the per capita debt increased \$12.23, or 57.2 per cent. The cities of Barre and Rutland and the towns of Bennington and St. Johnsbury showed decreases in both net and per capita debt since 1902. St. Johnsbury town showed a reduction of over 50 per cent in both net and per capita debt during this period.

That group of cities, towns, and villages having a population of 2,500 to 8,000 reported an aggregate net debt of \$2,416,793 in 1913, an increase of \$1,225,066, or 102.8 per cent, over the aggregate reported in 1902. During the period 1890 to 1902 these places reported an increase of \$501,147, or 72.6 per cent. The city of Montpelier, with a net indebtedness of \$345,795, was the largest debtor of the group. The amount reported for this city was an increase of \$166,287, or 92.6 per cent over that of 1902, the per capita debt increasing \$15.37, or 53.6 per cent, during the same period. From 1890 to 1902 the city showed a decrease in both net and per capita debt. The highest per capita debt in this group and in the state, \$62.09, was reported by the city of Springfield, the amount shown being an increase of \$57.19, or 1,167.1 per cent, over that reported in 1902. Eight places in this group reported reduction in both net and per capita debt.

Those villages having a population of less than 2,500 in 1910 reported an aggregate net debt of \$823,517 in 1913, an increase of \$189,216, or 29.8 per cent, over that of 1902. No comparable data are available for 1890. The per capita debt for these places as a group was \$27.81 in 1913.

The "specified civil divisions" shown in Table 7 are fire districts and unincorporated towns having a population of less than 2,500. The fire districts reported a net debt of \$97,381 in 1913; and the towns, a net debt of \$639,165. No comparison can be made with the indebtedness of these places in prior years.

The independent school districts of the state reported a net indebtedness of \$593,693 in 1913. As in other states, the amount shown does not include the indebtedness on account of schools of cities or towns having a population in excess of 2,500. In former reports the school debt was included with that of the city, town, or county.

The aggregate gross indebtedness of all civil divisions in Vermont, exclusive of school districts, amounted to \$6,158,790. Of this amount, \$5,123,318, or 83.2 per cent, represented funded or fixed debt; \$955,173, or 15.5 per cent, revenue loans; and \$80,299, or 1.3 per cent, outstanding warrants. No special assessment loans were reported. As an offset to this gross debt, the various divisions reported sinking funds amounting to \$341,747, or 5.5 per cent of the total debt, leaving a net debt, including the debt of the independent school districts, of \$6,410,736, a per capita debt of \$17.81.

VIRGINIA.

The civil divisions of the state of Virginia reported a total debt less sinking fund assets amounting to \$39,886,753 in 1913. The counties of the state had contracted \$5,543,733, or 13.9 per cent, of this amount; the cities, towns, and villages, \$33,049,264, or 82.8 per cent; and the school districts, \$1,293,756, or 3.2 per cent of the total. The amount reported in 1913 shows an increase of \$15,952,291, or 66.6 per cent, over the amount reported in 1902. The per capita debt increased \$6.09, or 48.2 per cent, during this period. During the period 1890 to 1902 the net debt increased \$7,324,381, or 44.1 per cent, while the per capita debt increased \$2.61, or 26 per cent.

The total debt reported by counties in 1913 amounted to \$5,839,685. Of this amount, \$5,758,408, or 98.6 per cent, represented funded or fixed debt, chiefly in the form of general bonds; \$69,855, or 1.2 per cent, revenue loans; and \$11,422, or 0.2 per cent, outstanding warrants. No special assessment debt was reported by the counties, this method of levying taxes being practically prohibited in Virginia. Sinking fund assets were reported amounting to \$295,952, or 5.1 per cent of the total debt.

Twenty-nine of the 100 counties in the state reported no debt. Many others reported only a small amount of outstanding warrants or revenue loans in anticipation of taxes to be collected. Very few of the counties reported a debt in excess of \$100,000. Wise County, with a total of \$700,000, was the largest individual debtor, followed by Tazewell and Mecklenburg Counties, with \$450,000 and \$431,000, respectively. Each of these counties reported debt in 1902, but the amount reported in 1913 represents, in each case, a very material increase. The greater portion of the funded or fixed debt consisted of bonds issued for the purpose of constructing highways and bridges,

the entire amount reported by Wise County having been issued for that purpose.

The net debt reported by all counties in 1913 was \$5,543,733, an increase of \$3,363,975, or 154.3 per cent, over the amount reported in 1902. The per capita debt during this period increased \$1.93, or 139.9 per cent. During the period 1890 to 1902 the net debt of the counties increased \$405,223, or 22.8 per cent, while during the same period the per capita debt increased only \$0.13, or 10.4 per cent. In comparing the data for 1913 with that of prior years it must be borne in mind that the indebtedness of the school districts in 1902 and in 1890 was, in part at least, included with that of counties, and that it is reported separately in 1913. It would probably be correct to assume that all of the amount shown for independent school districts in 1913 should be charged to the counties to make them comparable with the data presented for 1902 and 1890. This would materially increase the amounts of indebtedness shown for the counties and all of the derived percentages and per capita debts shown for 1913.

The data presented for the counties do not include any of the 17 independent cities, or "city counties," of the state. These cities are shown separately, following the other counties of the state, in Table 2.

As mentioned above, the cities, towns, and villages of Virginia have incurred 82.9 per cent of the debt of the civil divisions of the state. The total debt reported by these places in 1913 amounted to \$38,783,973. Of this amount, \$38,124,552, or 98.3 per cent, represented funded or fixed debt; \$523,179, or 1.3 per cent, revenue loans; and \$136,242, or 0.4 per cent, outstanding warrants. Offsetting the total debt were sinking fund assets amounting to \$5,734,709, or 14.8 per cent of the total debt. The net debt reported by incorporated places amounted to \$33,049,264, an increase of \$11,294,560, or 51.9 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net debt increased \$6,919,158, or 46.6 per cent. The per capita debt for all incorporated places in Virginia was \$53.48 in 1913. Per capita debt for these places as a group was not calculated in prior years.

Cities having a population in excess of 30,000 reported the major portion of the indebtedness of incorporated places, reporting a total of \$23,468,130. Of this amount, over \$17,000,000 was reported by Richmond and Norfolk, the former city reporting a net debt of \$9,129,372. The largest percentage of increase from 1902 to 1913 is shown by those cities having a population of 2,500 to 8,000; the increase in the net debt of these cities was \$1,978,667, or 96.4 per cent. Those cities falling in the class 8,000 to 30,000 show only a very slight increase in net debt, and a very decided decrease in the per capita debt. Cities of over 30,000 inhabitants show an increase in net

debt amounting to \$8,946,866, or 61.6 per cent. During the period 1890 to 1902 cities in this class show an increase of \$3,845,867, or 36 per cent. According to the 1910 census there were 159 incorporated places in Virginia having a population of less than 2,500. Data for these places were secured largely by correspondence. Reports were received from 146 places, and of this number, 65 reported a net debt aggregating \$1,474,035, a per capita debt of \$13.82, and an increase of \$348,910, or 31 per cent, over the amount reported for places in this class in 1902. In this latter year, however, only 41 places of this class reported debt.

The independent school districts of the state reported a total debt of \$1,293,756 in 1913. No comparable data were secured in 1902, the debt of these districts at the close of that year evidently having been included as a part of the county debt. This debt does not represent the entire indebtedness on account of schools, for the reason that the debt of cities having a population of 2,500 and over on account of schools is included with city debt.

If all the civil divisions of the state, except school districts, are considered as a single unit, it will be seen that the total debt reported in 1913 amounted to \$44,623,658. Of this amount, \$43,882,960, or 98.4 per cent, represented funded or fixed debt; \$593,034, or 1.3 per cent, revenue loans; and \$147,664, or 0.3 per cent, warrants outstanding. Against the total debt the various divisions held in sinking funds a total of \$6,030,661, or 13.5 per cent of the total debt; leaving a net indebtedness, including the debt of school districts, which is assumed to be net, of \$39,886,753, a per capita debt of \$18.73.

WASHINGTON.

The civil divisions of Washington reported a total debt less sinking fund assets amounting to \$94,415,072 in 1913. Of this amount, the counties had contracted \$10,300,505, or 10.9 per cent; cities, towns, villages, etc., \$77,173,977, or 81.7 per cent; and the school districts, \$6,940,590, or 7.4 per cent of the total debt. The amount reported for 1913 shows an increase of \$66,129,729, or 233.8 per cent, over the amount reported in 1902. The per capita debt increased \$18.81, or 36.6 per cent, during this period. During the period 1890 to 1902 the net debt of all civil divisions of the state increased \$25,439,685, or 89.4 per cent, while during the same period the per capita debt increased \$43.26, or 531.5 per cent. It should be mentioned here that prior to 1880 the state of Washington was practically unorganized, and that it has since that time been the scene of a most wonderful development. The harbor facilities offered by Puget Sound and the development of agriculture and mining in the eastern counties of the state have resulted in a growth nothing short of marvelous. It is not surprising that with such growth in wealth should come an

apparently enormous increase of obligations, particularly in the centers of population.

The total debt reported by the counties of Washington was \$10,365,315 in 1913. Of this amount, \$7,191,513, or 69.4 per cent, represented funded or fixed debt, and \$3,173,802, or 30.6 per cent, revenue loans. The sinking fund assets of all counties amounted to only \$64,810, or 0.6 per cent of the total debt. The net debt reported by the counties amounted to \$10,300,505, a per capita debt of \$7.66, and an increase of \$4,004,994, or 63.6 per cent, over that of 1902. During this period the per capita debt decreased from \$11.44 to \$7.66, or 33 per cent. The net debt in 1890 was \$1,507,786, increasing to \$6,295,511 in 1902, or 317.5 per cent. During this period the per capita debt increased from \$4.32 to \$11.44, or 164.8 per cent. An increase of 63.6 per cent in indebtedness with a decrease of 33 per cent in the per capita debt during the period 1902 to 1913, furnishes a striking indication of the growth of the state. It will be noticed that no debt to be paid from special assessments is shown in the county table. This is due, no doubt, to the lack of constitutional authority, express authority for incurring such debt having been granted to "cities, towns, and villages" only. Revenue loans formed a comparatively large amount of the total debt, due to the practice in many counties of borrowing in anticipation of the receipt of taxes. There were no outstanding warrants.

The total debt reported by cities, towns, and villages in 1913 was \$77,783,141. The funded or fixed debt amounted to \$48,236,408, or 62 per cent; and special assessment debt and revenue loans amounted to \$27,555,855, or 35.4 per cent of the total. Outstanding warrants amounted to \$1,990,878, or 2.6 per cent of the total debt.

The indebtedness to be paid from special assessments amounted to \$24,508,711, or almost one-third of the total debt. Compared with other states, this amount is very much in excess of the usual proportion.

Sinking fund assets amounted to \$893,574, or only 1.2 per cent of the total debt.

The net debt of all cities, towns, and villages amounted to \$76,889,567 in 1913, an increase of \$58,274,014, or 313 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net debt increased \$17,569,043, or 1,678.8 per cent. The per capita debt in 1913 was \$91.50. Considering the various classes of cities, it will be seen that the greatest percentage of increase in the amount of indebtedness during the period 1902 to 1913 was reported by those cities having a population of 8,000 to 30,000, the increase being 640.8 per cent. Cities with a population in excess of 30,000 reported a net debt of \$61,895,852, an increase of \$47,051,974, or 317 per cent. This group includes four cities, of which Seattle is the largest. This city reported the largest debt,

\$34,414,471, an increase of \$27,129,998, or 372.4 per cent, over the amount reported in 1902, followed in order by Spokane, Tacoma, and Everett. The last-mentioned city shows the largest percentage of increase, 524.1 per cent, during the period 1902 to 1913. All these cities show material increases in indebtedness and in per capita debt. In fact, no city in the state with a population in excess of 2,500 shows a reduction of debt during the period mentioned. Of those places which reported debt in 1913, none reported in 1880, in which year the total debt of incorporated places amounted to only \$34,927.

According to the census of 1910 there were 151 incorporated places in the state with a population less than 2,500. Reports were secured by correspondence from 141 of these places, and of this number 106 reported a net indebtedness aggregating \$3,557,882. This amount was an increase of \$1,777,919, or 99.9 per cent, over the amount reported in 1902. In 1890 places of this class reported a net debt of only \$86,633.

The "specified civil divisions" shown in Table 7 consisted of drainage, dike, and slough districts. These divisions reported a total debt of \$284,410, all of which was in the form of outstanding warrants. These districts were located in counties and their indebtedness is of no special importance in any of them, amounting to only 0.3 per cent of the total net debt.

Considering all the civil divisions of the state, except school districts, as a single unit, it will be seen that they reported a total debt of \$88,432,866. Of this amount, \$55,427,921, or 62.7 per cent, represented funded or fixed debt, chiefly in the form of general bonds; \$24,508,711, or 27.7 per cent, special assessment loans; \$6,220,946, or 7 per cent, revenue loans; and \$2,275,288, or 2.6 per cent, outstanding warrants. Against the total debt, sinking funds were held by the various divisions amounting to \$958,384, or 1.1 per cent of the total debt, leaving a net debt of \$87,474,482. Adding to this amount the indebtedness of the school districts, \$6,940,590, which was not included because no segregation by class of debt was reported, makes the total net debt of the state \$94,415,072, a per capita debt of \$70.21.

WEST VIRGINIA.

The total debt less sinking fund assets reported by the civil divisions of the state of West Virginia amounted to \$11,195,094 in 1913. The counties of the state had incurred \$2,443,173, or 21.8 per cent of this indebtedness. The cities, towns, and villages had incurred \$7,273,221, or 65 per cent. The school districts incurred \$1,478,700, or 13.2 per cent of the total debt. The net debt reported in 1913 shows an increase of \$6,427,318, or 134.8 per cent, over the amount reported in 1902. The per capita debt during this period increased \$3.79, or 79.3 per cent. During the period 1890 to 1902 the net debt increased

\$2,419,827, or 103.1 per cent, while during the same period the per capita debt increased \$1.70, or 55.2 per cent. The greatest percentage of increase among the civil divisions occurred in the school districts, where the increase from 1902 to 1913 was 409.5 per cent. The cities, towns, and villages show an increase during the same period of 199.2 per cent.

The counties of West Virginia reported a total debt of \$2,701,422 in 1913. Of this amount, \$2,399,500, or 88.8 per cent of the total, represented funded or fixed debt, principally general bonds; \$228,611, or 8.5 per cent, temporary loans; and \$73,311, or 2.7 per cent, outstanding warrants. As an offset to the total debt the counties reported sinking funds to the amount of \$258,249, or 9.6 per cent of the total debt. No special assessment debt was reported.

The net debt of counties reported in 1913 amounted to \$2,443,173, an increase of \$414,308, or 20.4 per cent over that of 1902. The per capita debt decreased \$0.16, or 7.9 per cent, during this period. From 1890 to 1902 the net debt of the counties increased \$831,403, or 69.4 per cent, while during the same period the per capita debt increased \$0.46, or 29.3 per cent. A comparison of the various kinds of indebtedness reported in 1913 with those reported in 1902 shows a very marked change during that period. In 1902 the counties reported a bonded debt of \$945,200, and in 1913 this form of debt had been increased to \$2,399,500, or 153.9 per cent. On the other hand, outstanding warrants show a reduction from \$1,109,029 in 1902 to \$73,311 in 1913, a decrease of 93.4 per cent. Several counties which reported large amounts of outstanding warrants in 1902 reported a large increase in bonded debt in 1913, indicating a funding of debt. This feature appears generally in those counties reporting debt; the outstanding warrants reported in any one county in 1913 being comparatively small.

The increase in the amount of bonded debt of the counties is largely accounted for by the condition set out in the preceding paragraph, though in a few of the counties considerable sums have been expended for the improvement of highways and for the construction of new county buildings.

The cities, towns, and villages of West Virginia reported a total debt of \$8,148,290 in 1913. Of this amount, \$7,416,671, or 91 per cent, represented funded or fixed debt; \$680,023, or 8.4 per cent, special assessment and revenue loans; and \$51,596, or 0.6 per cent, outstanding warrants. Sinking funds were held amounting to \$904,079, or 11.1 per cent of the total debt. The net debt reported in 1913 shows an increase of \$4,823,176, or 199.2 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net debt of all cities, towns, and villages increased from \$1,132,188 to \$2,421,035, or 113.8 per cent. The per capita debt in 1913 was \$19.31. Per capita were not calculated for prior years.

The greater portion of the debt for cities was reported by those in that class having a population of 8,000 to 30,000. The highest per capita debt, \$28.71, was also reported by this class. As a rule, those cities having a population in excess of 2,500 reported an increase in the amount of debt, though in many cases the amount of increase is comparatively small. The city of Wheeling is the largest individual debtor, having reported a net debt amounting to \$1,120,009, closely followed by Charleston with a net debt of \$893,693. Clarksburg shows the highest rate of increase in net indebtedness, 757.6 per cent, of any of the cities of importance in the state.

There were 184 cities, towns, and villages in West Virginia with a population of less than 2,500 in 1910. Reports were received from 171 of this number. Of these, 77 reported a net debt aggregating \$952,981, a per capita debt of \$7.75, basing the per capita on the population of all places reporting.

The indebtedness of the independent school districts amounted to \$1,478,700 in 1913, an increase of \$1,188,485, or 409.5 per cent, over the amount reported in 1902. It is doubtful, however, if the amount reported in 1902 represented the total school district debt, inasmuch as reports were received from only 21 of the 55 counties in the state in that year; nor does the amount shown for 1913 represent the debt of the state on account of schools. As explained in the general text, the amount shown is for those independent districts which do not include within their boundaries any city having a population of 2,500 or more, the school debt for such places being included with the city debt reported.

The total debt of all civil divisions, not including that of school districts for which no segregation by class of obligation was made, amounted to \$10,879,712. Of this amount, \$9,846,171, or 90.5 per cent, represented funded or fixed debt, \$333,177, or 3.1 per cent, special assessment loans; \$575,457, or 5.3 per cent, revenue loans; and \$124,907, or 1.1 per cent, outstanding warrants. Sinking fund assets amounting to \$1,163,318, or 10.7 per cent of the total debt, were held by the several divisions, leaving a net debt of \$9,716,394 for all divisions reporting. Including the school district debt, which is assumed to be net, the total net debt of the state amounted to \$11,195,094, a per capita debt of \$8.57.

WISCONSIN.

The civil divisions of Wisconsin reported an aggregate net debt less sinking fund assets of \$37,816,043 in 1913. Of this amount, \$4,100,570, or 10.8 per cent, was reported by the counties; \$31,113,006, or 82.3 per cent, was reported by the cities, villages, towns, etc.; and \$2,602,467, or 6.9 per cent, was reported by the independent school districts. The net debt reported in 1913 was an increase of \$17,746,428,

or 88.4 per cent, over that reported for 1902, which year showed an increase of \$11,924,426, or 146.4 per cent, over the amount reported in 1890. The per capita debt during the period 1902 to 1913 increased \$6.22, or 66.1 per cent; and during the period 1890 to 1902 it increased \$4.58, or 94.8 per cent.

The counties of the state, as a separate unit, reported a gross debt of \$4,198,336. Of this amount, \$3,949,822, or 94.1 per cent, represented funded or fixed debt; \$173,673, or 4.1 per cent, revenue loans; and \$74,841, or 1.8 per cent, outstanding warrants. Only 3 of the 71 counties reported sinking fund assets, the total for these being \$97,766, leaving a net debt for all counties of \$4,100,570. The net debt reported was an increase of \$1,195,329, or 41.1 per cent, over the amount reported in 1902. During this period the per capita debt was increased only \$0.33, or 24.3 per cent. From 1890 to 1902 the net debt of the counties increased \$1,375,560, or 89.9 per cent, while the per capita debt increased \$0.45, or 49.5 per cent.

Of the 71 counties in the state 18 reported no debt, and several others reported only revenue loans or outstanding warrants. No special assessment loans were reported by any county. Milwaukee County reported the largest debt, \$1,222,324, of which \$1,182,168 was funded or fixed debt and \$40,156 was in the form of outstanding warrants. No sinking funds were reported. The net debt reported in 1913 was an increase of \$731,624, or 149.1 per cent, over the amount reported in 1902, which year showed an increase of \$380,700, or 346.1 per cent, over the amount reported in 1890. The per capita debt in 1913 was \$2.62, an increase of \$1.19, or 83.2 per cent, over the amount reported for 1902, the latter year showing an increase of \$0.96, or 204.3 per cent, over the amount reported in 1890. Brown County reported a net debt of \$252,500, and was the only county, aside from Milwaukee, to report a net debt in excess of \$200,000. The largest per capita debt, \$10.63, was reported by Florence County, with a net debt of \$36,571. The smallest per capita debt, \$0.02, was reported by Pepin County, with a debt of \$142 in the form of outstanding warrants.

The cities and villages of the state reported a gross debt of \$30,553,356. Of this amount, \$26,349,560, or 86.2 per cent, represented funded or fixed debt; \$1,741,541, or 5.7 per cent, special assessment loans; \$1,482,351, or 4.9 per cent, revenue loans; and \$979,904, or 3.2 per cent, outstanding warrants and orders. Offsetting this debt were sinking fund assets amounting to \$663,989, or 2.2 per cent of the total debt. The net debt reported in 1913 was \$29,889,367, an increase of \$14,262,288, or 91.3 per cent, over the amount reported in 1902. During the period from 1890 to 1902 the net debt increased \$9,781,180, or 167.3 per cent. The per capita debt for all incorporated places

was \$22.98 in 1913. No per capita debt was calculated for these places, as a group, in prior years.

In 1913 there were 5 cities in Wisconsin with an estimated population in excess of 30,000, and these places reported an aggregate net debt of \$16,473,727, an increase of \$6,495,368, or 65.1 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net debt of the group was increased \$6,220,445, or 165.5 per cent. The city of Milwaukee was the largest debtor in this group, having reported a net debt of \$12,991,762 in 1913, an increase of \$5,592,776, or 75.6 per cent, over the amount reported in 1902. During the period 1890 to 1902 the net debt of this city increased \$4,483,086, or 153.7 per cent. The per capita debt was \$31.79 in 1913, having increased \$7.01, or 28.3 per cent, over that of 1902. From 1890 to 1902 the per capita debt increased \$10.52, or 73.8 per cent. Superior was the only city in the group to report a reduction in net indebtedness during the period 1902 to 1913, the reduction amounting to \$163,087, or 12.9 per cent. The per capita debt during this period was reduced from \$38.07 to \$25.43, or 33.2 per cent. The city of Oshkosh, though showing a slight increase in the net debt reported in 1913, reported a decrease of \$1.04, or 6.8 per cent, in the per capita debt. The largest per capita debt in the group, \$33.34, was reported by the city of La Crosse and represented an increase of \$17.62, or 112.1 per cent, over the amount reported in 1902.

The 18 cities having a population of 8,000 to 30,000 reported an aggregate net debt of \$7,209,357 in 1913, an increase of \$3,909,406, or 118.5 per cent, over the amount reported in 1902. From 1890 to 1902 the net debt increased \$1,835,655, or 125.4 per cent. The per capita debt for the group was \$24.22 in 1913. The largest debtor in this group was the city of Madison, which in 1913 reported a net debt of \$1,758,820, an increase of \$1,318,020, or 299 per cent, over the amount reported in 1902. During this period its per capita debt increased \$39.78, or 187.9 per cent. From 1890 to 1902 its net debt increased \$240,800, or 120.4 per cent, while the per capita debt during the same period increased \$6.27, or 42.1 per cent. Three cities in this group reported a decrease in the net debt from that of 1902, and an equal number reported a decrease in the per capita debt. The city of Stephens Point, although showing a slight decrease in the net debt, shows an increase of \$0.28 in the per capita debt.

In the group of places having a population of 2,500 to 8,000, 50 cities reported an aggregate net debt of \$4,415,455 in 1913, an increase of \$2,960,663, or 203.5 per cent, over the amount reported in 1902. During the period 1890 to 1902 these places reported an increase of \$1,029,764, or 242.3 per cent. Only 4 cities in this group reported a decrease in the net indebtedness from that of 1902, and 3 reported a de-

creased per capita debt. Twenty-five of the cities in this group reported no debt in 1890. The largest debt in this group, \$363,684, was reported by the city of West Allis, which also reported the largest per capita debt, \$54.73.

Reports were secured from 302 of the 304 incorporated places which had a population of less than 2,500 in 1910. These places reported an aggregate net indebtedness of \$1,790,828 in 1913, an increase of \$896,851, or 100.3 per cent, over the amount reported in 1902. From 1890 to 1902 the net debt of these places increased \$695,316, or 350 per cent. The per capita debt of this group was \$7.65.

The independent school districts of the state reported a net debt of \$2,602,467 in 1913, an increase of \$1,474,943, or 130.8 per cent, over that of 1902. These figures, however, are not strictly comparable as explained in the general text.

The "towns" in Wisconsin are similar in organization to the townships in neighboring states. These divisions reported a net indebtedness of \$325,739 in 1913, a decrease of \$84,032, or 20.5 per cent, from that of 1902.

Incorporated drainage districts in the state reported a net debt of \$897,900 in 1913. All of this amount was in the form of general bonds, which were issued by districts in all parts of the state, although counties bordering on the Mississippi River issued the larger part of the bonds.

A summary of the indebtedness reported by the several divisions of the state shows a gross debt of \$35,977,238, of which \$31,411,503, or 87.3 per cent, represented funded or fixed debt; \$1,786,069, or 5 per cent, special assessment loans; \$1,656,024, or 4.6 per cent, revenue loans; and \$1,123,642, or 3.1 per cent, outstanding warrants. As an offset to this debt, the various divisions reported sinking fund assets amounting to \$763,662, or 2.1 per cent of the gross debt, leaving a net debt, including the debt of independent school districts, for which no segregation by class of obligation was reported, of \$37,816,043, a per capita debt of \$15.63.

WYOMING.

The civil divisions of the state of Wyoming reported a total indebtedness less sinking fund assets amounting to \$4,202,012 in 1913. Of this amount, the counties were obligated for \$972,940, or 23.2 per cent; the cities, towns, and villages, for \$2,972,485, or 70.7 per cent; and the independent school districts, for \$256,587, or 6.1 per cent. The net debt reported was an increase of \$1,936,282, or 85.5 per cent, over the amount reported in 1902. The per capita debt during this period increased \$2.19, or 9.3 per cent. The increase in the net debt from 1890 to 1902 was \$938,349, or 70.7 per cent, while the per capita debt during the same period increased \$1.67, or 7.6 per cent.

The gross indebtedness reported by the counties of the state in 1913 amounted to \$1,003,958, of which \$577,451, or 57.5 per cent, represented funded or fixed debt; \$408,495, or 40.7 per cent, revenue loans; and \$18,012, or 1.8 per cent, outstanding warrants. As an offset to the gross indebtedness the counties held sinking funds amounting to \$31,018, or 3.1 per cent of the total debt. The net debt reported in 1913 was a decrease of \$257,527, or 20.9 per cent, from the amount reported in 1902. During this period the per capita debt was reduced \$6.82, or 53.4 per cent. From 1890 to 1902 the net debt of the counties increased \$146,677, or 13.5 per cent, while during the same period the per capita debt was reduced \$5.07, or 28.4 per cent. During the period 1890 to 1913 the net debt of the counties was reduced \$110,850, or 10.2 per cent, while the per capita debt was reduced \$11.89, or 66.6 per cent.

Crook County was the only county in the state reporting no debt, although 7 other counties reported material reductions in the net debt and 12 reported a reduction in the per capita debt. Only 2 counties—Park and Weston—reported an increase in the per capita debt. Laramie County, which reported a net debt of \$426,205 in 1913, was the largest individual debtor among the counties, but showed a reduction in both net and per capita debt from that of 1902. None of the counties reported special assessment loans, and only a comparatively small amount was reported in the form of outstanding warrants. Three counties—Albany, Converse, and Uinta—reported sinking funds, which aggregated \$31,018, or 25.7 per cent of the total debt reported by these counties.

The cities, towns, and villages of Wyoming reported a total debt of \$3,019,808. Of this amount, \$2,896,650, or 95.9 per cent, represented funded or fixed debt; \$58,800, or 2 per cent, special assessment loans; \$51,922, or 1.7 per cent, revenue loans; and \$12,436, or 0.4 per cent, outstanding warrants. Offsetting the total debt were sinking fund assets amounting to \$47,323, or 1.6 per cent of the gross debt. The net debt, \$2,972,485, was an increase of \$2,138,406, or 256.4 per cent, over the amount reported in 1902, the latter year showing an increase of \$590,488, or 242.4 per cent over the debt of 1890. The per capita debt for all incorporated places, as a single unit, was \$43.66 in 1913.

There were no cities in Wyoming with a population of 30,000 or more. Three cities composed the group having an estimated population of 8,000 to 30,000. Of these, Cheyenne, the largest city, reported a net debt of \$1,130,004 in 1913, an increase of \$704,608, or 165.6 per cent, over the amount reported in 1902, the per capita showing an increase of \$69.25, or 226.5 per cent. During the period 1890 to 1902 the net debt increased \$282,643, or 198 per cent, while the per capita debt increased \$18.36, or 150.4 per cent. The city of Sheri-

dan reported a net debt of \$562,500 in 1913, an increase from 1902 of \$455,038, or 423.4 per cent, while during the same period the per capita debt decreased \$16.02, or 23.2 per cent.

The city of Casper, with a net debt of \$110,345 in 1913, was the largest debtor in the group of cities with a population of 2,500 to 8,000. The net debt reported was an increase of \$87,345, or 379.8 per cent, over that of 1902. The per capita debt during this period increased \$15.76, or 60.5 per cent. The city of Rawlins, the second city in size in this group, reported a net debt of \$70,000 in 1913, an increase of \$14,576, or 26.3 per cent, over that of 1902. The per capita debt during this period decreased \$7.47, or 31.2 per cent.

In the group of places having a population of less than 2,500 there were 41 incorporated towns. Of this number, 40 made returns, and 21 of these reported a net debt aggregating \$830,684, an increase of \$743,018, or 847.5 per cent, over the amount reported in 1902. From 1890 to 1902 the net debt increased \$74,166, or

549.8 per cent. The per capita debt for the group was \$36.72 in 1913. The per capita debt was not calculated for these places as a group in prior years.

The independent school districts of the state reported a net indebtedness of \$256,587, in 1913, an increase of \$55,403, or 27.5 per cent, over that of 1902. The amounts shown here are not strictly comparable for reasons given in the general text of Part III.

Summarizing the indebtedness reported by the various civil divisions of the state, it will be seen that there was reported a gross debt of \$4,023,766, of which \$3,474,101, or 86.3 per cent represented funded or fixed debt; \$58,800, or 1.5 per cent, special assessment loans; \$460,417, or 11.4 per cent, revenue loans; and \$30,448, or 0.8 per cent, outstanding warrants. As an offset to this indebtedness, the various divisions held sinking fund assets amounting to \$78,341, or 1.9 per cent of the gross debt, leaving a net debt, including the debt of independent school districts, of \$4,202,012, a per capita debt of \$25.73.

GENERAL TABLES

COUNTY AND MUNICIPAL INDEBTEDNESS.

299

TABLE 1.—TOTAL AND PER CAPITA INDEBTEDNESS LESS SINKING FUND ASSETS OF COUNTIES AND OTHER CIVIL DIVISIONS, BY GEOGRAPHIC DIVISIONS AND STATES: 1913, 1902, AND 1890.

[For a text discussion of this table, see pages 230 and 240.]

GEOGRAPHIC DIVISION AND STATE.	INDEBTEDNESS LESS SINKING FUND ASSETS.									Population, estimated as of July 1, 1913.							
	Total.				Per capita.

¹ Includes all debt of independent school districts except that of those incorporated places shown in Table 6 which had a population of 2,500 and over in 1910.

² Population enumerated as of Apr. 15, 1910; decrease since 1900; no estimate made.

³ Per capita not computed.

⁴ Includes population of Pinellas County organized in 1912 from part of Hillsborough County.

⁵ Population not estimated; Pinellas County organized in 1912 from part of Hillsborough County.

⁶ No information for the year 1913; records destroyed by fire.

⁷ Excess of sinking fund assets over indebtedness.

TABLE 2.—TOTAL AND PER CAPITA INDEBTEDNESS LESS SINKING FUND ASSETS OF COUNTIES AND OTHER CIVIL DIVISIONS, BY COUNTIES: 1913, 1902, AND 1890—Continued.

¹ Includes all debt of independent school districts except that of those incorporated places shown in Table 6 which had a population of 2,500 and over in 1910.

² Population enumerated as of Apr. 15, 1910; decrease since 1900; no estimate made.

³ Per capita not computed.

⁴ Includes part of population of Willacy County organized in 1911 from parts of Cameron and Hidalgo Counties. Includes also part of population of Brooks County organized in 1911 from parts of Hidalgo, Starr, and Zapata Counties.

⁵ Population not estimated; Jim Wells County organized in 1911 from part of Nueces County.

TABLE 2.—TOTAL AND PER CAPITA INDEBTEDNESS LESS SINKING FUND ASSETS OF COUNTIES AND OTHER CIVIL DIVISIONS, BY COUNTIES: 1913, 1902, AND 1890—Continued.

1 Population enumerated as of Apr. 15, 1910; decrease since 1900; no estimate made.

2 Per capita not computed.

3 Includes population of Moffat County organized in 1911 from part of Routt County.

4 Less than one-half of 1 cent.

5 Excludes population of St Johns County for which there is no information for the year 1913; records destroyed by fire.

6 Includes population of Pinellas County organized in 1912 from part of Hillsborough County.

COUNTY AND MUNICIPAL INDEBTEDNESS.

353

1 Population enumerated as of Apr. 15, 1910; decrease since 1900; no estimate made.

2 Excess of sinking fund assets over indebtedness.

3 Per capita not computed.

4 Population not estimated; Brooks County organized in 1911 from parts of Hidalgo, Starr, and Zapata Counties.

5 Includes part of population of Willacy County organized in 1911 from parts of Cameron and Hidalgo Counties.

COUNTY AND MUNICIPAL INDEBTEDNESS.

385
